ELARA · 3 NOV 2026 · FOR THE DEVELOPERS

Beta fixes and hardening

These fixes stop answers being lost, the app showing the wrong state, and dead ends in the beta's core journey: onboarding, the daily session, leaving and resuming, finishing, and coming back later. Each fix was reproduced before it was changed, has a regression test, and was checked in a web build of the real app against a local API. None of it has been tested on a phone. Nothing was pushed, deployed or migrated.

How to apply. `1-beta-fixes-and-hardening.mbox` is a `git format-patch` series on top of `main` at `1363407`. Apply it with `git am 1-beta-fixes-and-hardening.mbox`.

- It contains 11 commits: the approved UI polish (`f24224d`), the day-session fixes, the hardening fixes, a merge, and one commit that makes the two branches work together.
- In total: 47 files, +1604/−145.
- Recommended order: review, merge, run the checks below, then build for TestFlight or ship an OTA update on the beta channel.

Fixed (ranked by impact on testers)

#	Problem	Fix	Commit · test
1	**Lost work.** After signing in on a new phone, or after a session expired, Hoy offered Week 1 · Day 1 until her progress loaded (forever if the load failed). Answering overwrote her real Day 1 answer on the server.	The store records whose progress it holds (`progressSyncedFor`). Hoy and the Atlas offer no day until her own progress is read. A read is applied only for the account it was made for.	`8e7d820`, `deceec0` · progressSync, accountState, query tests
2	**Lost work.** Log out deleted answers that hadn't synced, while the dialog said they were kept.	Log out first tries to send her answers. If any are still unsent, the dialog warns her.	`c72c2bb` · sessionEnd
3	**Lost work.** «Prefiero pasar» discarded text she had typed.	Her input is kept as the step's draft.	`2c22c4a` · draft
4	**Lost work, dishonest message.** An answer the server refused for good (400/403/404/422, for example a lapsed subscription mid-day) was dropped from the queue with her words, while the screens said «guardadas».	The queue's new `onDropped` hook puts her words back in the step, marked as not saved. The step and the completion screen say so, and she can resend.	`2c22c4a` · stepQueue, draft
5	**Wrong state.** After a day finished offline late at night and synced after midnight, the phone offered the next day. The server (which stamps completion at upload) then refused it with 403 `day_locked`.	The day gate counts a day that's still queued from now, which is the server's rule.	`2c22c4a`, `eaa4ede` · dayGate
6	**Wrong copy and failed saves.** A day opened cold (direct link, onboarding's Día 1, a notification, a slow network) pinned the bundled copy for the whole visit. Where step ids differ from the server's, answers get a 404.	The bundled pin gives way once to the server copy (`lib/dayPin.ts`).	`7115dcc` · dayPin (7)

7	**Dead end.** A free account at the week-2 gate looped: «se abre mañana» → membership screen «Continúa…» → back to Hoy.	An honest locked-week line and badge. The membership screen says there is nothing to buy and links to support.	`55d5c43` · todayEntry
8	**Misleading.** «Guardamos lo que escribiste» showed over a day she had only opened.	The line shows only when an answer or a draft with words is kept.	`98bcf3f`, `9ff8d44`
9	**Stale state.** After an offline launch, failed reads (content, «Para hoy», streak, config) were never retried once back online.	Going from offline to online refetches every failed on-screen query.	`f248a9b` · query
10	Small fixes: the old weather art beside Money Día 1's income options; «De vuelta en la vuelta.»; the input placeholder at 3.4:1 contrast (now 5.9:1).	Leftover removed; proposed string; readable ink.	`2c22c4a`

Merge note. `qk.myPaths` query data is now `{ owner, list }`. Any other branch reading it must use `.list`.

Checks on the integrated branch (HEAD `eaa4ede`)

Command	Result
`pnpm --filter @elara/mobile typecheck`	pass
`pnpm --filter @elara/mobile test`	pass (exit 0)
`pnpm --filter @elara/mobile lint`	exit 1 with the same 12 errors and 377 warnings as main. All the errors predate these changes, in `atlas/globe/{GlobeScreen,Sheets,Postcard}.tsx`; nothing new.
`pnpm --filter @elara/api typecheck` / `test`	pass / pass (exit 0)
`apps/api/scripts/check-content-parity.mjs`	fails on main as well (82 drifts since `75694f6`; see blocker 3)

What "verified" means here

- **Code and unit tests:** every fix.
- **Browser:** every fix was reproduced in the web build at 393×852 and 360×780, before and after. The integrated build was walked from onboarding to Day 1, leaving halfway with a draft, resuming and finishing. The rest of the integrated walk (next day, offline sync, Log out, a fresh sign-in) passed on the individual branches. The run on the merged build was cut short by a usage limit.
- **Device:** none. There was no phone or simulator. See the device checks below.

Remaining beta blockers (ranked)

1. **Week-2 access for testers** (owner and production database). The only way past week 2 is a hand-given `beta_grant` row (90 days; the admin button or `scripts/grant-beta-all.sql`, which covers only accounts that already exist). New testers and lapsed grants are stuck. Testers are on week 2 (Wuzhen). Check every tester, or grant automatically while `BETA` is on (an API change and a deploy). Also: `wrangler.toml` says the beta runs on the production backend, which contradicts `docs/BETA-BACKEND.md`.
2. **Ship it.** It's unknown which commit TestFlight is running (Gate 0 in `docs/BETA-GATES.md`).

3. **Content drift.** `75694f6` changed the app copy without regenerating `seed-content.sql`. Regenerate it (`db:seed:gen`) and reseed after deploying the API. The copy is still marked as needing native review.
4. **Server pacing** (product decision plus an API deploy). Completion is stamped when the answers arrive, so a day finished offline late at night costs her the next day. Proposed: base `assertDayOpen` on her claimed local date (`completedOn`).
5. **Day screen** (handled by the session redesign):
   - Reopening yesterday's day says «Listo por hoy / Mañana...».
   - «Ver lo que respondiste» opens the completion card, not her answers.
   - Day 1 opened from onboarding may skip the week-1 opening with its safety note (seen once).
6. `/api/me` returning 5xx at sign-in lands her on the welcome screen and polls about twice a second. Not fixed; work had started but is unfinished and not in the patch.
7. The offline banner covers the top controls (taps still work). Needs design.
8. Owner decisions:
   - expired-session copy;
   - Log out keeping unsent answers;
   - a link from Hoy back to week 1 (the route exists via Atlas → «Ver lista»);
   - legal URLs (Gate 1).
9. Círculos: «Mis círculos» stays on «Cargando...» after she picks interests without joining a circle.

Device checks still needed

- **Keyboard** (Android 360-wide edge-to-edge, and iOS): «Terminar por hoy» and «Prefiero pasar» stay above the keys. The field, mic row, photo caption and long answers stay visible. The auth and onboarding fields stay usable.
- **Voice answers** (days 9 and 26).
- **Android** back button on the membership screen and the Log out dialog.
- **Offline cold start** with the SecureStore session (including fix 1).
- **expo-network** transitions (fix 9) and captive portals.
- **App foreground triggers** for queue flushing.

New Spanish strings (pending María and Alejandra)

- «¿Cerrar sesión sin sincronizar?» · «Algunas de tus respuestas todavía no llegaron a tu cuenta. Si cierras sesión ahora, se borrarán de este teléfono.» · «Cerrar sesión igualmente»
- «Una de tus respuestas no se pudo guardar en tu cuenta. Tus palabras siguen en ese paso, en este teléfono.»
- «Esta respuesta no se pudo guardar en tu cuenta. Tus palabras siguen aquí para que puedas enviarlas de nuevo.»
- «De nuevo en la vuelta.» (was «De vuelta en la vuelta.»)

THE FULL REPORTS, SCREENSHOTS AND LOGS ARE IN THE PROJECT REPO UNDER `DELIVERABLES/BETA-FIXES-2026-11-03` AND `DELIVERABLES/BETA-HARDENING-2026-11-03`.
