PILOT / VERSION 2.1 / ENGLISH REVIEW

Your money.
Something you understand and can use.

Seven complete sessions, including proposed scripts, follow-up responses, production notes, and the review checklist.

From the first visit: learn something about investing and connect it to a decision of your own.

Proposed length: 3-5 minutes per session, to be checked in beta. An optional reflection can extend a visit. The audio and video scripts are ready for review; recordings and clips have not been produced.

Session	Experience	What she takes away
1	Audio + two scenes	Saving/investing and her own purpose
2	Calendar with two levels	A date or commitment to check
3	Audio + private rehearsal	Words that represent her
4	Two-perspective clip	A question as a possible shareholder
5	Change an assumption	An idea about compound growth
6	Compare fictional funds	A criterion and a check
7	Editable note from saved choices	Her own words and a chosen next step

What changed in this version

Investing appears in the first visit. Users who understand balances can choose a harder case. Emotional questions have specific optional follow-ups. Several activities support exploration without a test; the final session brings her notes together without another list.

Where to review

Complete sessions: pages 3-16. Review checklist: page 17. Sources and scope: page 18. This English edition translates the complete Spanish review content in Version 2.1, including its production and reviewer notes.

What remains open

Emotional relevance and daily use are hypotheses. María reviews language and situations; Alejandra reviews voice. The content and proposed features need review before publication.

SHARED BEHAVIOUR

One learning point and one connection

An editorial proposal; it does not confirm current app capabilities.

How a visit unfolds

Brief opening; media with a text alternative; one experience to explore or check; one application; an ending. Show the user only her relevant route, not every branch in this document.

When to go deeper

Optional button: “Think a little further.” It opens at most one question from her selected branch. Her answer changes the draft, explanation, or saved detail. If no branch fits, offer continuing or an example without assigning an emotion.

Learning at her own pace

“Prefer to skip” and “Use an example” are always available. Session 2 offers a harder level. After skipping an activity, offer the explanation or continue. An omission does not become an answer or an error.

Media with a purpose

Audio accompanies; a clip shows a perspective shift; cards clarify quantities or comparisons. Offer “Read instead,” pause, and captions. Complete scripts also serve as transcripts. No mandatory playback or automatic sound.

Exploring and checking differ

Sessions 1 and 4 check an idea with feedback. Sessions 2, 3, 5, 6, and 7 explore routes; more than one choice can be reasonable. Do not turn a preference into a correct answer, financial profile, or recommendation.

Memory she can correct

Saving is optional. Recover only information saved by choice, with “Edit” and “Remove.” In session 7, omit missing fields and separate purpose, rehearsed words, and open question. Do not invent a transformation.

Privacy and honest states

Do not share answers with María or Circles by default. Do not record personal audio; the audio here is teaching content. Distinguish visiting, consulting a lesson, attempting an activity, and saving a card. Recognise what she did without certifying mastery.

Cases and numbers

Fictional examples use units. Calculations belong in code, with dates, rates, and assumptions visible. No product or allocation recommendations, account connections, sending drafts, or money movement within these sessions.

Without an activity: “The explanation is available if you want to return.” With a card: show only what she chose to keep. No option schedules a reminder on its own.

MONEY-PILOT-01 / V2.1 / SESSION

01. Save or invest? Start with what you want

Distinguish saving from investing and connect that to when money is needed.

3-5 minutes proposed / Short audio + two scenes / estimated narration: 45-55 s

1 / Opening

What decision would you like more freedom to make if you had a financial buffer?

Choices + optional free text: Change jobs / Choose where to live / Say no to something / Make time for something of my own / Learn to invest / Something else / Just explore

2 / Complete media script

Imagine money for a move next month and money you would not need for several years. Those are different purposes. Saving means setting money aside; investing means putting it into assets, such as shares or bonds, seeking a return while taking risks. An investment can lose value just when you need to use it. Before asking how much it might grow, consider what it is for and when it is needed. Today you will distinguish those ideas and connect them to your own decision. You can learn even if you have no money available.

Needed soon

Moving next month: access and value matter.

Years to wait

Exploring investing requires understanding risks and costs.

First question

What is it for, and when would I need it?

3 / Check an idea

Paula must pay for a move in four weeks. She is offered an investment that can rise or fall. What would you check first?

A. How much she might earn if things go well.

Potential gains matter but do not tell her whether the needed money will be available in four weeks. Consider loss and access too.

B. Whether she can recover the needed amount on time, including if its value falls. [Supported idea]

Yes. Her date and required amount are central to the decision. No product has been selected.

C. Whether four weeks is enough to recover from any decline.

Recovery within her time horizon cannot be assured.

Review copy only: “Supported idea” identifies the intended answer. Do not show that label before the user responds. Skipping allows reading the explanation or continuing.

MONEY-PILOT-01 / V2.1 / CONNECTION AND ENDING

What she makes her own

4 / Application

Keep one sentence: “I want a buffer for ___.” Add “I would need it soon,” “I could wait years,” or “I do not know when.” Do not automatically assign saving or investing from that answer; more context is needed. Paula’s example is available.

Elara responds to what she indicated

Use one relevant branch, with at most one optional question when she chooses to go deeper. Use family names or relationships only if she supplied them.

Chooses work or housing. If she taps “Think a little further”: “What option would that buffer open that feels limited today?” Then: “We can keep that reason alongside the timing you chose.”

Chooses learning to invest. “Start with a useful distinction: setting money aside and taking risk in pursuit of growth serve different purposes. Another question is when you need to use it.”

No income or just exploring. “Use Paula’s example. No savings promise or money is needed to continue.”

5 / Something to return to

If saved, her first card holds her decision, optional reason, and time horizon, including “to confirm.” Lesson to revisit: saving and investing differ; purpose and timing matter.

Proposed actions: “Save,” “Edit,” and “Finish without saving.” A previous note must exist and she must choose to view it before it is recovered.

Reason to return

Next: distinguish money visible in an account from money available after payments before payday.

On return or after a skipped session

Retrieve her sentence only if she saved it and chooses to view it. Otherwise, use Paula. Do not claim she chose a product or started saving.

Media and delivery

Proposed audio by Ale. Two understated scenes, without aspirational wealth imagery. Keep saving versus investing and risk within the lesson, with a complete transcript.

Reviewer: what to check here

Does the first visit teach something recognisable and connect to a specific wish? Does the wording for a financial buffer feel natural for this audience?

Conceptual sources: S1, S8. Sources on page 18.

MONEY-PILOT-02 / V2.1 / SESSION

02. What you have and what is already spoken for

Spot a timing gap and recognise that a positive balance is not necessarily uncommitted money.

3-5 minutes proposed / Editable calendar demonstration / estimated narration: 40-55 s

1 / Opening

When you see an account balance, do you know what is already committed before more money arrives?

Choices + optional free text: Not always / Yes, give me a harder case / My income varies a lot / No income now / Use an example

2 / Complete media script

Ana has one hundred available. She owes one hundred fifty on day five and will receive two hundred on day ten. Future income does not resolve the fifty missing on day five. Cash flow means looking at amounts coming in and out, and their dates. An account balance also does not prove money is uncommitted; a payment may already be planned. Today, move a card to explore what changes when a date is confirmed or delayed. The calendar shows consequences without changing any real agreement.

Today

100 available.

Day 5

150 due. Gap: 50.

Day 10

200 arrives after the payment date.

3 / Explore what changes

Explore one version of Ana’s calendar. Each move reveals a consequence; there is no winning option.

A. Income arrives on day four.

Hypothetically, 100 + 200 = 300 before the payment; paying 150 leaves 150. Confirm the date; this is not assumed to be spare investment money.

B. Income is delayed until day twelve.

There is still a gap of 50 on day five. Later income does not remove the earlier gap.

C. Payment might move to day eleven.

If agreed and there are no other outflows, income would arrive before payment. Moving a card changes no real due date and assures no agreement.

Review copy only: “Supported idea” identifies the intended answer. Do not show that label before the user responds. Skipping allows reading the explanation or continuing.

MONEY-PILOT-02 / V2.1 / CONNECTION AND ENDING

What she makes her own

4 / Application

Standard route: choose one personal payment and income date, or mark “to confirm,” or keep Ana’s example; amounts are not requested. Harder route: 300 now; 180 payment on day five; 200 income on day ten; 170 payment on day twelve. Ask her to estimate the ending balance, then reveal 150: 300 - 180 + 200 - 170. Ask what other commitments need checking before treating it as uncommitted.

Elara responds to what she indicated

Use one relevant branch, with at most one optional question when she chooses to go deeper. Use family names or relationships only if she supplied them.

Variable income. “Which date needs confirming first for this calendar to help?” One answer is enough; keep the open fact without counting uncertain income as received.

Understands the basic case. If she chooses the harder case, skip the basic narration and activity. Open the advanced case. For 150: “That matches the example; other payments still need checking.” For another amount, show the arithmetic without judging ability.

No personal data. “Ana’s calendar is enough. Keep the question: what must leave before money arrives again?”

5 / Something to return to

Keep one date to confirm or her chosen rule: “Before treating money as free, I check which payments come first.” The advanced route can keep an unresolved check.

Proposed actions: “Save,” “Edit,” and “Finish without saving.” A previous note must exist and she must choose to view it before it is recovered.

Reason to return

Next: when you want to help someone and also protect your own needs.

On return or after a skipped session

Let her choose to reopen her date or the fictional case. Do not request proof of income, screenshots, or documents.

Media and delivery

Move a card in the proposed prototype. Without interaction, use three static cards showing the same consequences. Always label the calendar as an example. Dragging changes no real payments.

Reviewer: what to check here

Does the advanced route avoid making experienced users feel patronised? Is the idea of money already being spoken for clear without jargon?

Conceptual sources: S2. Sources on page 18.

MONEY-PILOT-03 / V2.1 / SESSION

03. What if they think I’m selfish?

Distinguish what she wants to offer, what she can manage, and a response she chooses to rehearse.

3-5 minutes proposed / Personal audio + private rehearsal / estimated narration: 40-55 s

1 / Opening

If someone you love asked for money, what might make you say yes before knowing whether you can manage it?

Choices + optional free text: I do not want to seem selfish / I genuinely want to help / A prior commitment / Concern about their reaction / I can decide comfortably / Not applicable

2 / Complete media script

Helping can be a choice made with care. It can also mix with guilt, agreements, or fear of disappointing. Separate three things: what you want to offer, what you can manage now, and what you would like to say. Numbers help examine the second; they do not explain the whole relationship. Today, rehearse words that represent you, whether offering help, asking for time, or giving no money. The draft can stay here; it does not need to be sent.

What I want

What I would choose to offer.

What I can manage

What would remain uncovered.

What I say

Words that represent me.

3 / Explore what changes

Marta has 200 and needs 150 before payday. Someone asks for 100. Explore a response and see what changes.

A. “I need to check my payments before naming an amount.”

It creates time without promising money. A decision and confirmation of payments remain open.

B. “I want to offer 50 this time.”

The example leaves 150 for those costs. That does not prove 50 is appropriate; other commitments and Marta’s choice matter.

C. “I will not give money this time.”

She retains 200. The arithmetic cannot tell us her feelings or the other person’s reaction.

Review copy only: “Supported idea” identifies the intended answer. Do not show that label before the user responds. Skipping allows reading the explanation or continuing.

MONEY-PILOT-03 / V2.1 / CONNECTION AND ENDING

What she makes her own

4 / Application

Choose, edit, or write a draft. If she taps “Think a little further,” ask only the relevant branch question before drafting. Then reread: “Does this express what I want to offer without promising what I cannot manage?” She may keep the example.

Elara responds to what she indicated

Use one relevant branch, with at most one optional question when she chooses to go deeper. Use family names or relationships only if she supplied them.

Worries about seeming selfish. Optional: “If you knew they would not be disappointed, what would you want to offer?” Use her answer in the draft without calling it affordable. Refer to her mother only if she named her.

Wants to help or has an agreement. “What would you want to preserve in that support, and what needs to stay covered for you?” Reflect both. Existing terms may need review; do not assume an agreement can be cancelled.

Concern about a reaction. Do not probe disappointment. “We can keep this private and think first about support that would help you feel safer.” If irrelevant, use Marta without looking for hidden conflict.

5 / Something to return to

Her exact wording, if saved. Elara may say: “Return to these words before replying.” Do not claim she set a boundary, sent a message, or resolved guilt.

Proposed actions: “Save,” “Edit,” and “Finish without saving.” A previous note must exist and she must choose to view it before it is recovered.

Reason to return

Next: the difference between liking a company and understanding ownership in it.

On return or after a skipped session

Offer “Reread,” “Edit,” or “Leave it here.” Do not routinely ask whether she sent it. Supporting family can be freely chosen and valuable.

Media and delivery

Ale can record the audio as a conversation. A deeper emotional question appears only by choice; Elara uses the answer to adjust the draft, not to diagnose.

Reviewer: what to check here

Does the question create recognition without blaming family? Does the draft sound like something she would actually say?

Conceptual sources: S2; original reflection and rehearsal. Sources on page 18.

MONEY-PILOT-04 / V2.1 / SESSION

04. From buying from a company to owning a part

Explain what a share represents and separate brand familiarity from an investment decision.

3-5 minutes proposed / Two-perspective explainer clip / estimated narration: 45-55 s

1 / Opening

Is there a company you use often that has made you think, “I wish I had invested in it”?

Choices + optional free text: Yes, one comes to mind / I think of others’ gains / I had not thought about it / I already invest / Use a fictional company

2 / Complete media script

As a customer, you may ask whether a product is useful and enjoyable. As a shareholder, you own a small part of the company. Not every company has shares traded on a stock exchange. Where they trade, buyers and sellers agree on a price that can rise or fall. Some companies pay dividends, but those payments are not guaranteed. Using a brand often does not show that buying its shares at today’s price is a good decision. Today, shift from the product you consume to the company you would partly own.

Customer	Shareholder	Market price
Is the product useful to me?	What do I own, and what might happen to its value?	Can rise or fall; a familiar brand is no guarantee.

3 / Check an idea

A fictional company has many customers. Which question adds a shareholder’s perspective?

A. What price would I pay for that stake, and what could affect the business? [Supported idea]

Yes. It adds business and price questions, although it is still insufficient for a purchase decision.

B. Do I prefer its product to another brand?

Useful as a customer; alone, it does not evaluate ownership, price, or risk.

C. What would I have made if I had bought earlier?

The past may spark curiosity but does not explain ownership or assure a future outcome.

Review copy only: “Supported idea” identifies the intended answer. Do not show that label before the user responds. Skipping allows reading the explanation or continuing.

MONEY-PILOT-04 / V2.1 / CONNECTION AND ENDING

What she makes her own

4 / Application

Choose a fictional or familiar company. Complete only: “As a customer I know ___; as a possible shareholder I still need to understand ___.” Prompts: how it earns money, what could affect its value, or the price being paid. Do not automatically research or recommend a ticker.

Elara responds to what she indicated

Use one relevant branch, with at most one optional question when she chooses to go deeper. Use family names or relationships only if she supplied them.

Missed gains. If she wants depth: “Are you drawn to understanding how it works, what others earned, both, or something else?” Use her answer to select an explanation without creating buying urgency.

Feels underinformed. “The question you named gives us a concrete next explanation.” Use only her stated question; do not declare readiness to buy.

Already invests. Allow skipping the definition and use the customer/owner comparison: “Which part of your decision comes from knowing the product, and which from understanding the investment?”

5 / Something to return to

One question she wants answered before considering a share. Concept to revisit: shares represent ownership; a familiar brand can also lose value.

Proposed actions: “Save,” “Edit,” and “Finish without saving.” A previous note must exist and she must choose to view it before it is recovered.

Reason to return

Next: change one number in an example and see how compound growth changes.

On return or after a skipped session

Recover her question only if she consented to saving it. If she asks about a specific purchase, keep the session educational and identify missing information.

Media and delivery

Show two perspectives on the same fictional company. No logos, profit testimonials, or purchase screen. The voice explains; the images demonstrate. Offer the exact transcript as an alternative.

Reviewer: what to check here

Does shifting from customer to shareholder spark curiosity? Is ownership understandable without making her feel tested?

Conceptual sources: S3, S9. Sources on page 18.

MONEY-PILOT-05 / V2.1 / SESSION

05. No magic: change a number and look

See what changes when an assumption changes and how a gain enters the next calculation.

3-5 minutes proposed / Controlled demonstration + voiceover / estimated narration: 40-55 s

1 / Opening

When other people talk about investing, what comes up for you?

Choices + optional free text: Curiosity / I feel late / Distrust of what they show / Nothing in particular / Skip

2 / Complete media script

Look at a calculation you can change. One hundred units at five percent annually becomes one hundred five after a year. If the gain stays, the next five percent applies to one hundred five: one hundred ten point two five after year two. That illustrates compound growth. The rate is an assumption, not a prediction. Changing time or the initial amount changes the example; real outcomes also depend on unknown returns and may include losses. Choose a change and see what happens.

Hypothetical base

100 initially; 5% annually; 2 years: 110.25.

More time

100 initially; 5% annually; 3 years: 115.76.

Two hypothetical declines

100 initially; -10% annually; 2 years: 81.00.

3 / Explore what changes

Choose an assumption to change. Reveal the calculation and explanation without requiring a correct guess.

A. One more year.

$100 \times 1.05^3 = 115.76$, rounded to two decimals. Still assumes 5% every year and no added money.

B. Start with 200 rather than 100.

$200 \times 1.05^2 = 220.50$. This changes the initial amount, not monthly contributions; it keeps two years and the assumed 5%.

C. Two years with no growth.

$100 \times 1.00^2 = 100.00$ after two years. There is no nominal increase; inflation is not accounted for.

D. Two years with a 10% decline each year.

$100 \times 0.90^2 = 81.00$. Value can also fall; this does not predict a particular loss.

Review copy only: “Supported idea” identifies the intended answer. Do not show that label before the user responds. Skipping allows reading the explanation or continuing.

MONEY-PILOT-05 / V2.1 / CONNECTION AND ENDING

What she makes her own

4 / Application

Keep “A gain can enter the next calculation,” “An assumption is not a promise,” or her own wording. Optional check: “In year two of the base example, does 5% apply to 100 or 105?” For 105: “Yes; it includes the first gain.” For 100: “After step one there are 105; the second 5% applies to that.”

Elara responds to what she indicated

Use one relevant branch, with at most one optional question when she chooses to go deeper. Use family names or relationships only if she supplied them.

Feels late. If she wants depth: “Is it harder not understanding yet, comparing yourself with others, both, or something else?” Offer explanation or return to her purpose; do not promise catching up or create urgency.

Distrusts others’ claims. “A gains figure leaves questions: contributions, elapsed time, costs, and risks.” She can keep one question.

No personal reflection. Open controls directly: “Learn by seeing what changes when one assumption changes.” Do not interpret silence or missing savings.

5 / Something to return to

If saved, keep her selected idea and explored assumption. Label: “Hypothetical; no added contributions, withdrawals, costs, taxes, or inflation adjustment.” Do not apply the rate to her finances.

Proposed actions: “Save,” “Edit,” and “Finish without saving.” A previous note must exist and she must choose to view it before it is recovered.

Reason to return

Next: two plausible funds and the questions that prevent choosing from one number alone.

On return or after a skipped session

Return to the assumption she explored if it was saved; otherwise, show the base case. Moving a control does not prove understanding.

Media and delivery

Use checked, fixed numerical states, not AI-generated calculations. For a text beta, reveal cards when selected. Always display HYPOTHETICAL EXAMPLE. The decline is a separate scenario, not a market prediction.

Reviewer: what to check here

Is exploration more interesting than solving an arithmetic question? Does the emotional element add value without delaying the demonstration?

Conceptual sources: S4, S5; original numerical examples. Sources on page 18.

MONEY-PILOT-06 / V2.1 / SESSION

06. Two funds. More than one thing to consider.

Compare concentration and one cost without inferring which option suits her.

3-5 minutes proposed / Two-card comparison / estimated narration: 45-60 s

1 / Opening

When two options look appealing, what reassures you most: a low cost, familiar companies, or understanding how money is spread?

Choices + optional free text: Low cost / Familiar companies / How money is spread / More than one fact / Not sure

2 / Complete media script

A fund pools investors' money and invests according to a strategy. Consider two fictional funds. A holds ten companies in one sector and lists an annual cost of zero point two percent. B holds five hundred companies across sectors and lists zero point five percent. A has the lower stated cost. B shows more companies and sectors, but we still need to know the portion of the fund's money in each company. Diversification can reduce dependence on a company or sector; it does not prevent every loss. These facts open questions rather than choosing for you.

Fictional fund A

10 companies; one sector. Listed annual cost: 0.20%.

Fictional fund B

500 companies; several sectors. Listed annual cost: 0.50%.

Still missing

Breakdown, strategy, other costs, risks, and my time horizon.

3 / Explore what changes

Do not choose a purchase. Choose which fact to investigate first and see what that check can and cannot resolve.

A. Start with cost: A lists less.

A real difference in these cards. Check what it includes and other costs before treating the percentage as total cost. This does not resolve concentration.

B. Start with spread: B holds more companies and sectors.

A reason to examine how money is spread: many holdings do not prevent a few from representing much of the fund. More names do not guarantee higher returns.

C. Start with when I would need the money.

This connects comparison to purpose. Risks, access, and terms remain open; neither name nor cost guarantees an amount on a date.

Review copy only: "Supported idea" identifies the intended answer. Do not show that label before the user responds. Skipping allows reading the explanation or continuing.

MONEY-PILOT-06 / V2.1 / CONNECTION AND ENDING

What she makes her own

4 / Application

Keep one question: “Which companies make up the largest portions of the fund, and what percentage does each represent?”, “What costs are missing?”, or “How does access fit my date?” Optional check: complete “A lists a lower cost, but ___.” “It is concentrated in one sector” identifies a difference; “it is therefore always worse” does not follow.

Elara responds to what she indicated

Use one relevant branch, with at most one optional question when she chooses to go deeper. Use family names or relationships only if she supplied them.

Prioritises low cost. “That cost can still matter while you check how money is spread. We can keep both questions.”

Familiar companies or quantity. Optional: “What fact would reassure you more than recognising the names?” Offer the money breakdown and sectors without naming B the winner.

Asks Elara to choose. “These cards show differences but lack enough context to say what fits you. Pick a check and see what it would answer.”

5 / Something to return to

Her chosen comparison question, not a recommended fund. Idea to revisit: one number does not explain risk, total cost, and suitability.

Proposed actions: “Save,” “Edit,” and “Finish without saving.” A previous note must exist and she must choose to view it before it is recovered.

Reason to return

Next: bring your own words together and choose a question to resolve beyond Elara.

On return or after a skipped session

If she did not save a question, offer the cards again. Never turn a click on A or B into a risk profile, portfolio, or recommendation.

Media and delivery

Give A and B equal visual weight, without winner colours. Percentages are fictional annual percentages of invested value; they are not total costs or real products. Do not calculate net returns from these facts.

Reviewer: what to check here

Do the cards allow a real discussion? Is there enough explanation of cost and how the money is spread without introducing too many concepts?

Conceptual sources: S6, S7, S8. Sources on page 18.

MONEY-PILOT-07 / V2.1 / SESSION

07. What you can take with you now

Turn her actual choices and practice into a next check that serves her purpose.

3-5 minutes proposed / Personal note + one next step / estimated narration: 35-50 s

1 / Opening

Look at what you chose to keep. Which part would you want to use beyond Elara?

Choices + optional free text: My purpose / Words I rehearsed / An idea I understand better / A question to resolve / Correct my note / I saved nothing

2 / Complete media script

A week may leave a better question, an explanation in your own words, or a sentence you want to use. To choose what comes next, return to what you wanted money to make possible. A useful next step answers a concrete question: confirming a date, understanding a cost, or examining investment holdings. Today we will bring together only what you chose to keep. Correct it, remove it, or start with an example. No new list needs filling out to finish.

You chose

Your purpose, if you saved it.

You rehearsed

Your exact words, if you kept them.

You want to check

The question you selected.

3 / Explore what changes

First show the note built from her saved cards, with “Edit” and “Remove” for each line. Then choose one way to use it.

A. Resolve an open question.

Show her saved question and three step types: confirm a fact, consult official information, or request an explanation. She chooses one; create no task or reminder without asking.

B. Explain an idea in my own words.

Choose shares, compound growth, or diversification. Offer the explanation support below and optional free text; not three tests.

C. Keep my words and finish.

Allow saving without inventing a next step. If she declines saving, finish without adding an obligation.

Review copy only: “Supported idea” identifies the intended answer. Do not show that label before the user responds. Skipping allows reading the explanation or continuing.

MONEY-PILOT-07 / V2.1 / CONNECTION AND ENDING

What she makes her own

4 / Application

With no saved cards, replace the opening with “Use an example or finish here.” Fictional example, not user testimony: “You chose: a buffer to change jobs. Timing: to confirm. You rehearsed: I need to check payments before naming an amount. You want to check: costs missing from a fund card.” Show only when she chooses the example. A real note uses saved, confirmed fields only; omit missing fields.

Elara responds to what she indicated

Use one relevant branch, with at most one optional question when she chooses to go deeper. Use family names or relationships only if she supplied them.

Saved personal cards. “This is what you chose to keep. Does any part no longer represent you?” Edit before closing; do not infer confidence or actions outside the app.

Wants to explain a concept. Support by choice: share = ownership, variable value; compound = a retained gain enters the next calculation; diversify = spread certain dependencies while losses remain possible. Correct only the confused part using its example.

No saved cards or declines recall. “Finish here or use the example. Learning does not require keeping a personal response.” Do not fabricate missing memories or show another user’s data.

5 / Something to return to

A note she reviewed and, only if chosen, a next step linked to her question. Suggested close: “Return to this note to continue from the point you chose.”

Proposed actions: “Save,” “Edit,” and “Finish without saving.” A previous note must exist and she must choose to view it before it is recovered.

Reason to return

“What would help next?” Choose debt interest / an emergency buffer / investing costs / more examples of shares and funds / not choosing yet. Save only if confirmed.

On return or after a skipped session

The note can change. Her next visit opens the question she confirmed or allows a different starting point. No response implies an opened account, investment, savings, or a scheduled reminder.

Media and delivery

Use her exact sentences, not a generated letter of praise. Separate stated purpose, rehearsed wording, and an open question. Do not report a transformation percentage or certify financial readiness.

Reviewer: what to check here

Does she feel recognised without Elara inventing a story? Does the ending offer continuity with less effort than another form?

Conceptual sources: S1-S8; original editorial synthesis. Sources on page 18.

REVIEW / MARÍA + ALEJANDRA

Test the complete experience

Review what the response and everything after it contribute.

For each session, choose “Ready to test” or “Needs revision.” Identify the exact sentence or moment and propose an alternative. Natural language and relevance need audience review; cultural identity alone does not establish either.

Session	Check	Revision or decision
1	Does she learn immediately and connect it to a decision?	_____
2	Can she choose a level and understand changed dates?	_____
3	Does her emotional answer improve the draft?	_____
4	Does the customer-to-shareholder shift spark curiosity?	_____
5	Does changing a number teach without promising results?	_____
6	Does she compare differences without being pushed to B?	_____
7	Does the note represent her and reduce effort?	_____

Language and emotion

Flag literal translations, patronising language, and assumptions about partners, family, income, or shame. Check that “Not applicable,” “Other,” and an example allow continuing without needing to defend herself. An intense question should leave clarity or a tool.

A small seven-visit test

With volunteers, test in text before producing media if needed. After each visit, ask: “What did you understand or discover?”, “What would you use beyond Elara?”, and “Did anything make you want to leave?” Do not ask participants to publish private answers.

At the end

Ask which session she would reopen and why, what felt repetitive, and what she expected to learn that was missing. Observe voluntary choice of another visit and explanations of concepts. Record actual responses; completing screens does not establish success.

Before recording

Finalise the concept and wording. Then test whether the medium improves understanding or reduces effort for the same concept. Keep equivalent text; media should not add a compulsory task.

SOURCES / SCOPE

What supports the content

Concepts checked against primary sources on 4 November 2026. Original scripts and scenes. Version 2.1 clarifies companies and exchange trading.

S1 / SEC Investor.gov / Introduction to Investing

Saving, investing, time horizon, and risk: session 1. U.S. accounts, guarantees, and tax rules are not applied to other countries.

Official source

S2 / CFPB / Creating a cash flow budget

Amounts, timing, inflows, and outflows. Sessions 2-3; the relational element in session 3 is an editorial proposal.

Official source

S3 / SEC Investor.gov / Stocks - FAQs

Shares, ownership, dividends, and risk: session 4.

Official source

S4 / SEC Investor.gov / Introduction to Investing

Compound growth and possible losses: session 5.

Official source

S5 / SEC Investor.gov / Compound Interest Calculator

Explicit assumptions: principal, time, rate, and frequency. Original examples: 110.25; 115.76; 220.50; 100.00; 81.00. No added contributions or withdrawals.

Official source

S6 / SEC Investor.gov / Asset Allocation and Diversification

Diversification, time horizon, and risk: session 6.

Official source

S7 / SEC Investor.gov / Characteristics of Mutual Funds and ETFs

Funds, concentration, and costs: session 6. The two cards and percentages are fictional, not recommendations.

Official source

S8 / SEC Investor.gov / Asset Allocation and Diversification

Time horizon, tolerance, and possible loss: session 7.

Official source

S9 / SEC Investor.gov / Public Companies

Companies and public trading: session 4. A familiar company may not have exchange-traded shares.

Official source

Scope of the numbers

Annual compounding: $100 \times 1.05^2 = 110.25$; $100 \times 1.05^3 = 115.76$; $200 \times 1.05^2 = 220.50$; $100 \times 1.00^2 = 100$; $100 \times 0.90^2 = 81$. A hypothetical rate stays constant within each case; no extra contributions, withdrawals, costs, taxes, or inflation adjustment.

Before publication

This is not a complete course. Debt, inflation, bonds, emergency buffers, and provider evaluation need further development. Review products, taxes, and protections by country if added. María reviews language and audience relevance; the team checks formats, saving, routes, and formulas.
