DAY 1

One bill, one date, one clearer answer

1 / BEGIN

Today, look at one payment and the money arriving before it. You can stay with the example.

Before treating money as free, check which payments leave first.

Look at a concrete example. Ana has US$300 now. Rent of US$180 is due on day five and electricity of US$170 on day twelve. A client owes US$200 and says payment will arrive on day ten, but that is unconfirmed. If payment arrives on day fourteen, only one hundred twenty remains before electricity and there is a gap of fifty. Future payment is not available money today. Dates reveal the gap before another amount is committed. Use the example without opening all your accounts.

Continue

2 / TRY AN IDEA

The client pays on day fourteen. What happens on day twelve, after rent but before that payment arrives?

Electricity is US$50 short.

Yes: US$300 - US$180 = US$120. Electricity is US$170, so US$50 is missing.

US$150 remains after electricity.

That would count US$200 before it arrives. It is still unreceived on day twelve.

US$120 remains after electricity.

US$120 is the amount before paying it. The US$170 electricity bill leaves a gap of US$50.

Skip

Yes: US$300 - US$180 = US$120. Electricity is US$170, so US$50 is missing.

DAY 1

One bill, one date, one clearer answer

3 / MAKE IT USEFUL

Which feels closest to your situation today?

I do not know when I get paid

Then the date is unconfirmed. Before counting that income toward a payment, find out when it will be available. One question to keep: “What day will the money be in my account?”

I do not want to open my accounts today

Stay with Ana. Her US$200 arrives after the electricity payment, so US$50 is missing that day. You can learn the idea without opening your accounts now.

My problem is that I do not have enough

Looking at dates creates no income. Separate two questions: does money arrive after the payment, or is there still a shortfall even counting all income? Those differ, and neither is solved just by telling you to organise better.

I have a different question

The example leaves US$120 for electricity costing US$170: US$50 is missing before the client pays. You can write a different question; this explanation does not treat it as answered.

My question (optional)

Skip

Before counting future income, confirm when it arrives.

Continue

4 / TAKEAWAY

Before counting future income, confirm when it arrives.

You can save this rule without adding personal details.

Save my rule · Finish without saving

Next: saving, investing, and when you need the money.

DAY 2

What is saving for, and what is investing for?

1 / BEGIN

We saw why dates matter. Today, see how a decision changes with when you need the money.

Money for a payment due soon should not depend on an investment going up.

Saving means setting money aside. Investing seeks a gain and accepts that value can change. Money for a payment due soon should not depend on an investment going up. Paula needs three hundred for a move in four weeks; having that amount on that date matters. A goal years away leaves more time to consider other options and learn their risks. Today’s first decision is simple: give money a purpose and time horizon before choosing where to keep it.

Continue

2 / TRY AN IDEA

Paula needs US$300 to move in four weeks. An option can lose value. What does she need to check first?

Whether the needed amount will be available by the payment date.

Yes. Access, possible loss, and timing matter for that purpose.

Whether a past gain assures she will have 300.

A past outcome does not assure the value on that date.

Only the gain if everything goes well.

Potential gains do not address the payment if value falls.

Skip

Yes. Access, possible loss, and timing matter for that purpose.

DAY 2

What is saving for, and what is investing for?

3 / MAKE IT USEFUL

What would you like to focus on today?

I want to learn to invest

Before choosing an investment, ask: “What is this money for, and when will I need it?” You can learn without committing money needed for an upcoming payment.

I want a buffer so I have more options

A buffer can help with an unexpected expense or give you time to decide. To give it a purpose, consider: “What would I like to handle without having to ask for money immediately?”

I cannot save right now

You can learn the distinction with Paula even if you cannot set money aside today. Wanting to learn and having money available to save are different things.

I have a different question

Paula needs US$300 in four weeks. First check whether that amount will be available on that date. You can write another question without choosing an investment.

My question (optional)

Skip

Money for a payment due soon should not depend on an investment going up.

Continue

4 / TAKEAWAY

Money for a payment due soon should not depend on an investment going up.

You can save this rule without adding personal details.

Save my rule · Finish without saving

Next: what to say before taking on a commitment.

DAY 3

Before saying yes

1 / BEGIN

Today, separate what you want to offer from what you can manage, and rehearse a response.

Wanting to help and being able to manage an amount are different questions.

Wanting to help and being able to give an amount are different questions. For the second, look at available money and payments needed before more income arrives. Marta has two hundred and needs one hundred fifty for those payments. Giving one hundred leaves one hundred: a gap of fifty. The calculation shows a consequence; it does not decide how much she cares or what she must say. Today, rehearse asking for time, offering something you want to check, or saying no. The words can stay a private draft.

Continue

2 / TRY AN IDEA

Explore a response from Marta. Each reveals a consequence; none is the morally correct answer.

“I need to check payments before naming an amount.”

Creates time without promising an amount. The decision stays open.

“I want to offer 50 this time.”

The example leaves 150 for the stated payments. That does not prove suitability; other commitments may exist.

“I will not give money this time.”

Keeps 200. The calculation predicts neither feelings nor the other person’s reaction.

Skip

In the example, you can ask for time without promising an amount.

DAY 3

Before saying yes

3 / MAKE IT USEFUL

What could make you say yes before you know whether you can manage it?

I worry about seeming selfish

If you knew the other person would not be disappointed, what would you want to offer? Start with: “I want to think about it and check my payments before naming an amount.”

I already help every month

You can want to continue helping and still need to check what you can manage. Rehearse: “I want to keep helping; I need to review what amount I can sustain.”

I worry about their reaction

You do not have to rehearse a conversation now. Keep the draft private and consider what support would help you feel safer before replying.

None of these; I prefer the example

Marta can ask for time without promising money: “I need to check my payments before naming an amount.” That is a complete response.

I have a different question

Giving US$100 in the example leaves US$100 for payments of US$150. Asking for time allows checking that gap before promising an amount. You can write a different question.

My question (optional)

My rehearsal phrase, if I want to write one (optional)

Skip

You can want to help and take time to check what you can manage.

Continue

4 / TAKEAWAY

You can want to help and take time to check what you can manage.

You can save this rule without adding personal details.

Save my rule · Finish without saving

Next: why a payment may reduce debt by a smaller amount.

DAY 4

Why paying 20 does not always reduce debt by 20

1 / BEGIN

Today, see why a payment can reduce debt by less than you expected. You do not need to open your own statement.

Check how much of a payment reduces the balance and what charges were added.

This fictional statement starts with a balance of one hundred. An interest charge of ten is added, then a payment of twenty is applied. With no purchases or other charges, the ending balance is ninety: one hundred plus ten minus twenty. You paid twenty, but the debt fell by ten. Look separately at balance, interest, and payment. Interest is a cost of borrowing money. You do not need to calculate your card’s rate today; first understand what changed in the statement.

Fictional example: no purchases or other charges.

Continue

2 / TRY AN IDEA

With only those entries, how much remains owed?

US$80.

That subtracts the payment but omits interest. The full calculation gives US$90.

US$90.

Yes: US$100 + US$10 - US$20 = US$90. Payment and debt reduction differed.

US$110.

That is after interest but before the payment of US$20.

Skip

Yes: US$100 + US$10 - US$20 = US$90. Payment and debt reduction differed.

DAY 4

Why paying 20 does not always reduce debt by 20

3 / MAKE IT USEFUL

What would you like to understand better?

I pay but the debt does not seem to fall

The example shows one possible reason: US$10 interest was added before applying payment. For your account, ask: “How much of my payment reduced the balance, and what charges were added?”

I do not know what interest means

Interest is a cost of borrowing money. The example adds US$10 before subtracting a US$20 payment. That leaves US$90.

I have no debt; I will use the example

Keep the calculation: US$100 + US$10 - US$20 = US$90. This is fictional; contracts can calculate interest and apply payments differently.

I have a different question

US$100 balance plus US$10 interest minus US$20 paid leaves US$90. You can write a different question; we do not need your account details.

My question (optional)

Skip

You paid twenty, but the debt fell by ten. Look separately at balance, charges, and payment.

Continue

4 / TAKEAWAY

You paid twenty, but the debt fell by ten. Look separately at balance, charges, and payment.

You can save this rule without adding personal details.

Save my rule · Finish without saving

Next: why the same amount can buy less.

DAY 5

Why the same amount buys less

1 / BEGIN

Today, see what happens when your money stays the same and prices rise. The example percentage is hypothetical.

The same amount can buy less when prices rise.

Inflation is a broad rise in prices. If your money stays the same while prices rise, it buys less. Consider a fictional basket costing one hundred dollars today. A ten-percent price rise makes it one hundred ten next year. Another ten-percent rise applies to one hundred ten, making it one hundred twenty-one. The same one hundred no longer buys the full basket. Today’s idea is to compare what you have with the cost of what you need.

Hypothetical example: 10% annually for two years.

Continue

2 / TRY AN IDEA

The basket costs US$100. Its price rises 10% one year and another 10% the next. What does it cost at the end of year two?

US$110.

That is year one; the second increase applies to US$110.

US$120.

That adds US$10 each year; the second 10% here is US$11.

US$121.

Yes: US$100 × 1.10 × 1.10 = US$121. The same percentage applied to a larger value.

Skip

Yes: US$100 × 1.10 × 1.10 = US$121. The same percentage applied to a larger value.

DAY 5

Why the same amount buys less

3 / MAKE IT USEFUL

What would you like to look at more closely?

I feel my money buys less

In the example, the money stays at US$100 while the basket costs US$121. The same balance no longer buys the full basket. The 10% explains the calculation; it is not your country’s inflation rate.

I did not understand why it is US$121

After the first rise, it costs US$110. The second 10% is calculated on US$110 and equals US$11. So US$110 + US$11 = US$121.

I prefer to stay with the example

Compare an amount of money with what it can buy. A balance can stay unchanged while covering less.

I have a different question

The second rise is calculated on US$110, not US$100, so the basket reaches US$121. You can write a different question.

My question (optional)

Skip

The same amount can buy less when prices rise.

Continue

4 / TAKEAWAY

The same amount can buy less when prices rise.

You can save this rule without adding personal details.

Save my rule · Finish without saving

Next: checking an offer that promises too much.

DAY 6

When an offer promises too much

1 / BEGIN

An offer can attract attention without giving you all the information. Today, practise checking before sending money.

High gains, no risk, and pressure: pause and verify.

Imagine this message: “20% a month, no risk. Send money today. Earn more by bringing friends.” The promise and pressure are reasons to pause and check. Someone you trust sharing it does not establish safety. Independently find the regulator relevant to the product and country; check the company’s name and contact details. The seller’s screenshots and links are not enough. Registration does not guarantee gains either.

Continue

2 / TRY AN IDEA

Which step checks the offer without relying only on the seller?

Read more screenshots from the same group.

The group’s screenshots repeat what the offer shows; they are not independent verification.

Send a small amount to see what happens.

A money test verifies neither identity nor absence of risk.

Find the company and its details on the regulator’s official site.

Yes. Find the official site independently and compare the name and contact details. A registered company can also be impersonated.

Skip

Yes. Find the official site independently and compare the name and contact details. A registered company can also be impersonated.

DAY 6

When an offer promises too much

3 / MAKE IT USEFUL

What would you like to examine in this case?

Someone I trust sent it

You can value the person and check the offer separately. Sharing it does not mean they verified who receives the money.

I need money quickly

That need is real. Pressure to decide today can make checking harder. You can reply: “I need to check this calmly before deciding.”

I already sent money and I am worried

You do not need to share details here. If you suspect a scam, promptly contact the bank or service used to pay and ask what options exist. You can leave the exercise to seek official help in the relevant country.

I prefer the example

The message combines high gains, “no risk,” pressure, and a reward for recruiting. Those call for checking the offer; WhatsApp or cryptocurrency alone does not prove fraud.

I have a different question

Before sending money, independently check who receives it and what official information exists. You can write another question without sharing names, contacts, or screenshots.

My question (optional)

Skip

High gains, “no risk,” and pressure: pause and check before sending money.

Continue

4 / TAKEAWAY

High gains, “no risk,” and pressure: pause and check before sending money.

You can save this rule without adding personal details.

Save my rule · Finish without saving

Next: one rule to take with you.

DAY 7

One rule to take with you

1 / BEGIN

You do not need saved notes to choose an idea from these visits.

These practices cover dates, when money is needed, what you can manage, interest, prices, and promises worth checking. There is no new concept today. Choose a useful rule or finish without saving. You do not have to demonstrate a change in your finances.

Continue

2 / TRY AN IDEA

Which rule would you like to keep?

Before counting future income, confirm when it arrives.

This rule returns to day 1. You can keep it or choose another.

Money for a payment due soon should not depend on an investment going up.

This rule returns to day 2. You can keep it or choose another.

You can want to help and take time to check what you can manage.

This rule returns to day 3. You can keep it or choose another.

You paid twenty, but the debt fell by ten. Look separately at balance, charges, and payment.

This rule returns to day 4. You can keep it or choose another.

The same amount can buy less when prices rise.

This rule returns to day 5. You can keep it or choose another.

High gains, “no risk,” and pressure: pause and check before sending money.

This rule returns to day 6. You can keep it or choose another.

Skip → You can continue without choosing a rule.

DAY 7

One rule to take with you

3 / MAKE IT USEFUL

How would you like to finish today?

I prefer to continue without writing

You do not need to add a phrase. Continue to the close.

I want to write my own phrase

You can write an idea in your own words. It will be a private note; no further writing is needed.

I prefer to finish without saving

You can finish here. You do not need to save anything for this visit to count.

I have a different question

You can leave a question for another time. Writing it does not mean this session has answered it. You can also finish without writing.

My question (optional)

My version, if I want to write one (optional)

Skip

Save the rule you chose or finish for today.

Continue

4 / TAKEAWAY

Save the rule you chose or finish for today.

With a selected rule

Save the rule you selected as written.

Save my rule · Finish without saving

With a written note

Save what you wrote as a private note.

Save my note · Finish without saving

Without a rule or note

You can finish without saving anything.

Finish for today

This week ends here.
