Círculos v2: antes y después

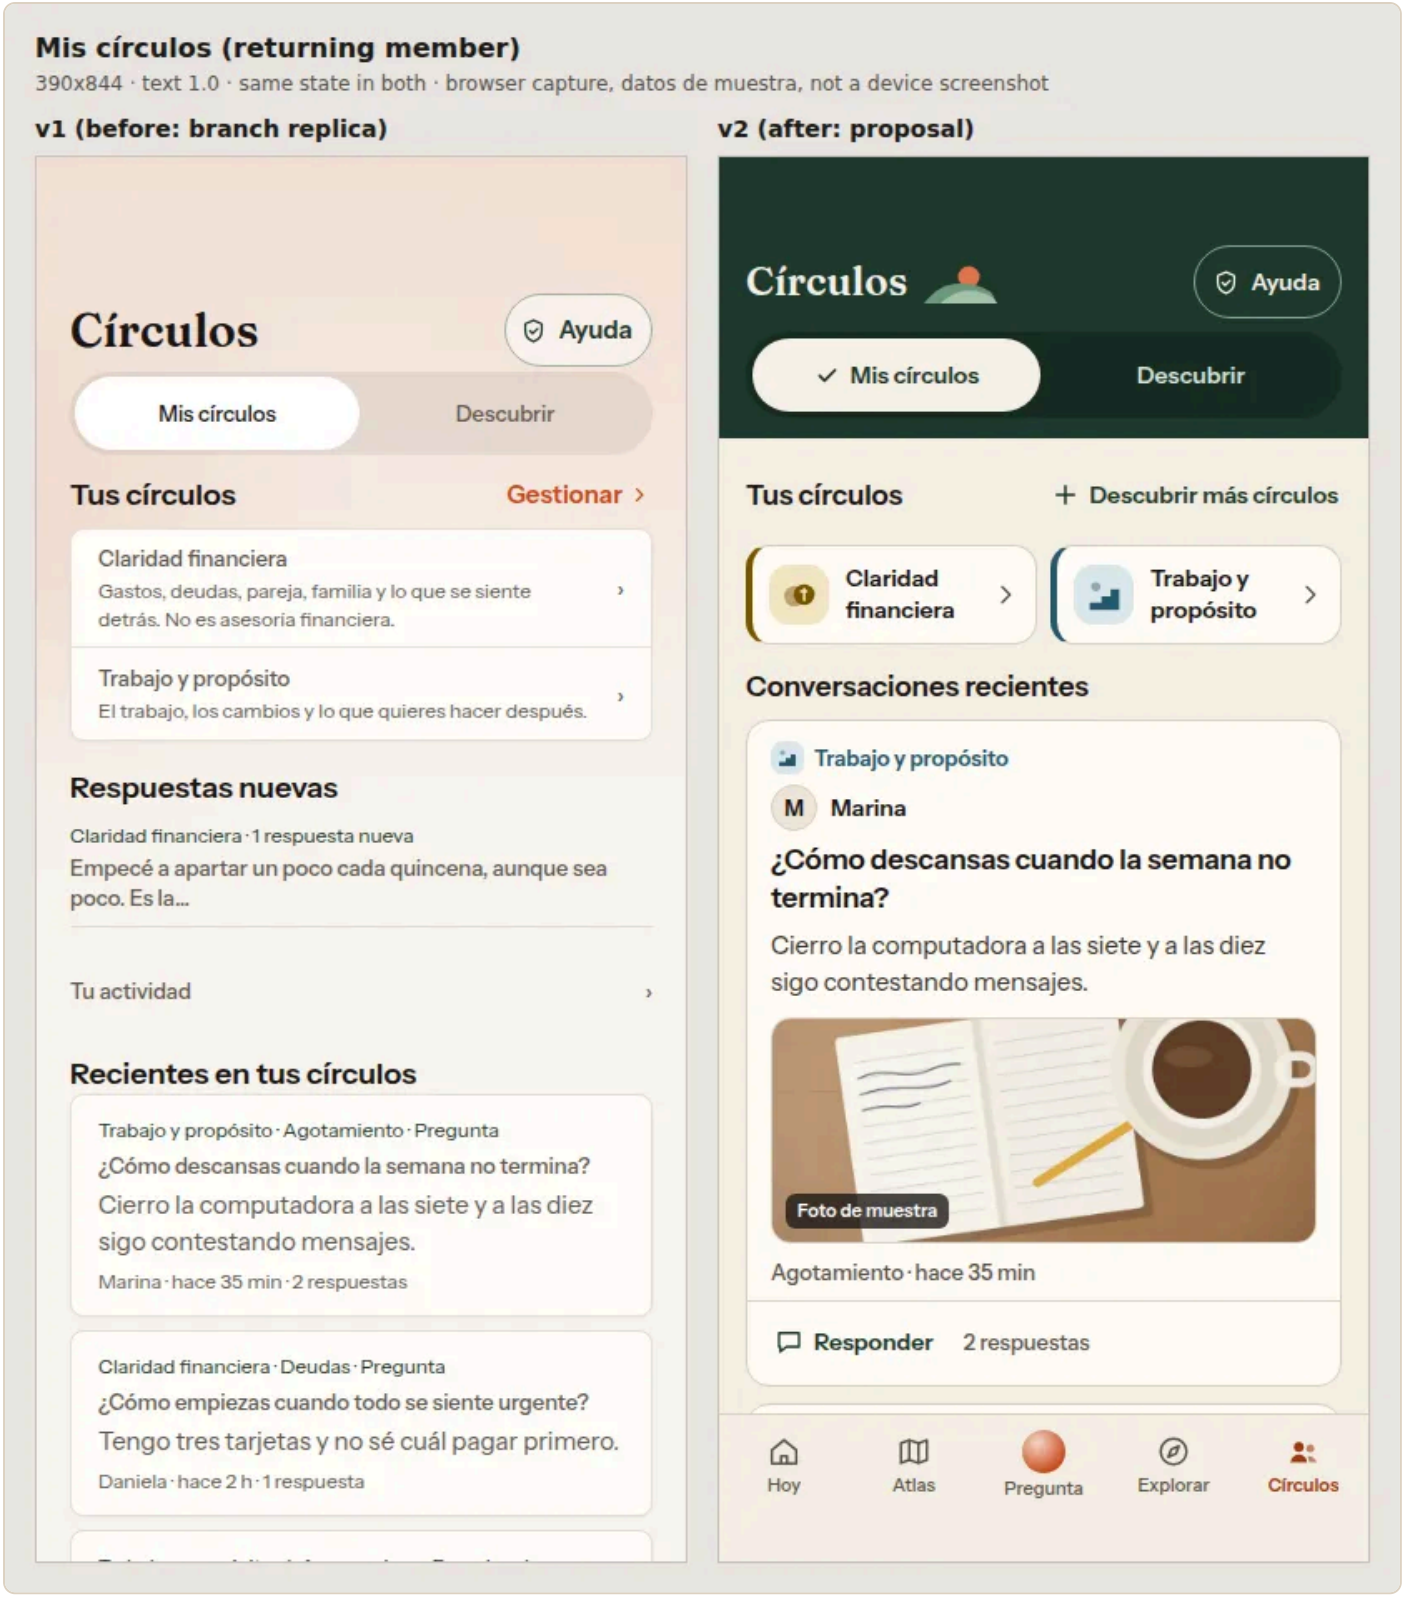

Visual refresh and clearer participation flows, built on the review branch `ux/circles-clarity-2026-10-21` (1d96cff). Left in every comparison: v1, the faithful replica of the branch. Right: v2, the proposal.

Date **22 Oct 2026** Clickable **claude.ai/artifact/8p5F7tHrbSgV3op1bLEjDG** Production **unchanged**
Copy **BORRADOR · pendiente de Alejandra**

What changed

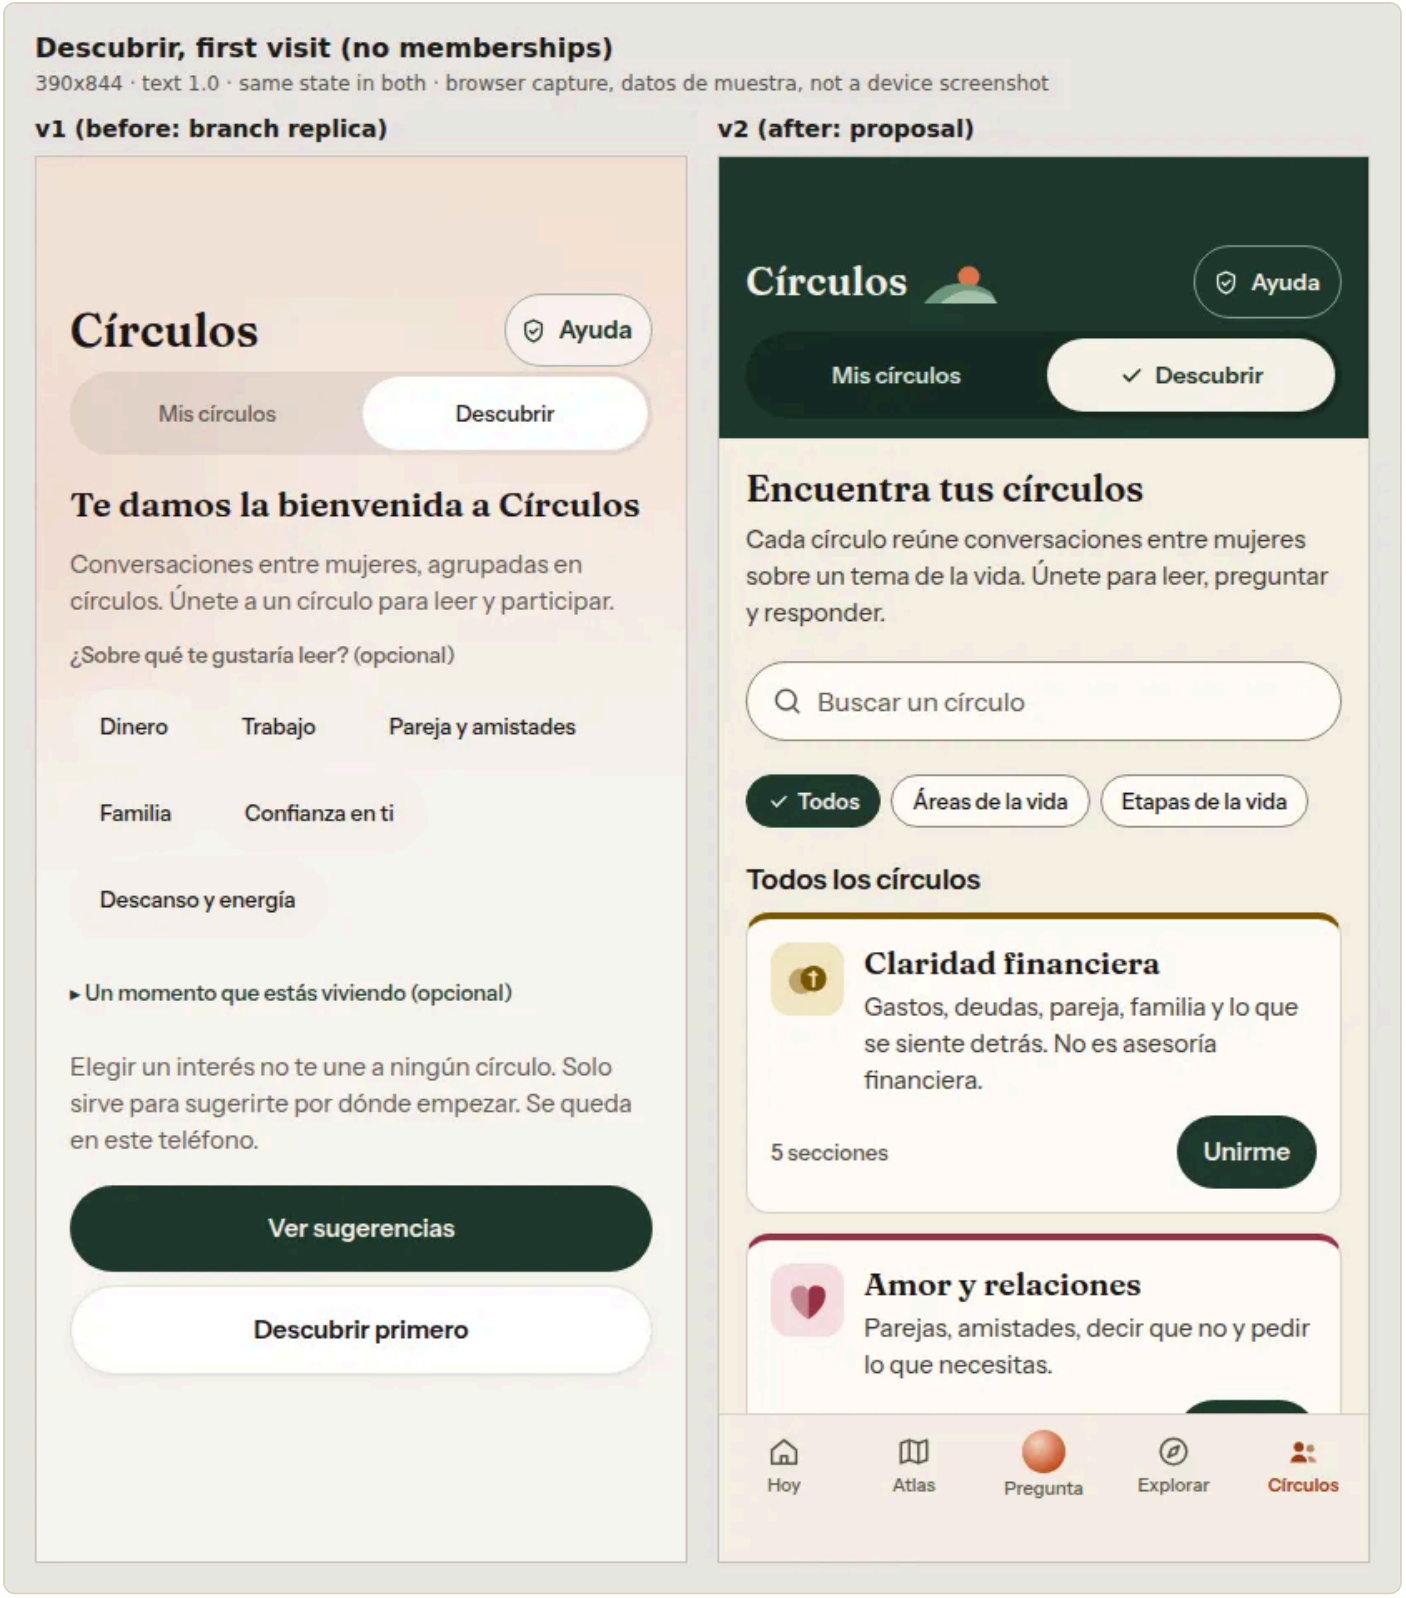

- **Look.** Compact forest header with an ivory «Círculos»; a clear selected state for «Mis círculos» and «Descubrir»; ivory page, firmer cards, darker text; one accent colour and small symbol per circle, always with its name. Forest for posting and replying, terracotta only for new-reply markers, red only for destructive actions. The blank shape under search and the faded filters are gone.
- **Choosing circles.** First visit opens on «Encuentra tus círculos»; single-column cards with name, catalogue description and «Unirme»; a short rules sheet, then she lands inside the circle. Interests are optional.
- **Returning members.** Joined-circle shortcuts, then recent conversations. New replies are marked on the card itself; the separate «Respuestas nuevas» list is gone. Management is at the end.
- **Inside a circle.** Compact header with «Normas» and «Ajustes», readable section filters, one «Escribir en este círculo» above the tab bar.
- **Posts and replies.** Author or «Anónima», the opening sentence as the lead, a preview, optional photo, «Responder» with the reply count, then section and time. «Publicada en…» becomes a small line. The reply name choice folds to one line.
- **Composer.** Current circle and section preselected and changeable; «¿Qué te está pasando o qué estás intentando resolver?»; no title field; drafts kept through back and failure and restored to the right place; «Descartar» with confirmation; one post per double tap.
- **Photo (simulated).** The branch has no photo support for circle posts. The prototype shows a local preview with replace, remove, uploading, error and retry, a capped feed preview and a larger view.
- **Fixes carried forward.** Rules reachable inside a circle; block copy no longer says «reflexiones»; notification copy describes what exists; contrast fixed; at 320 px with large text and the keyboard open, the reply field, send and «Ocultar teclado» stay on screen.

1. Mis círculos

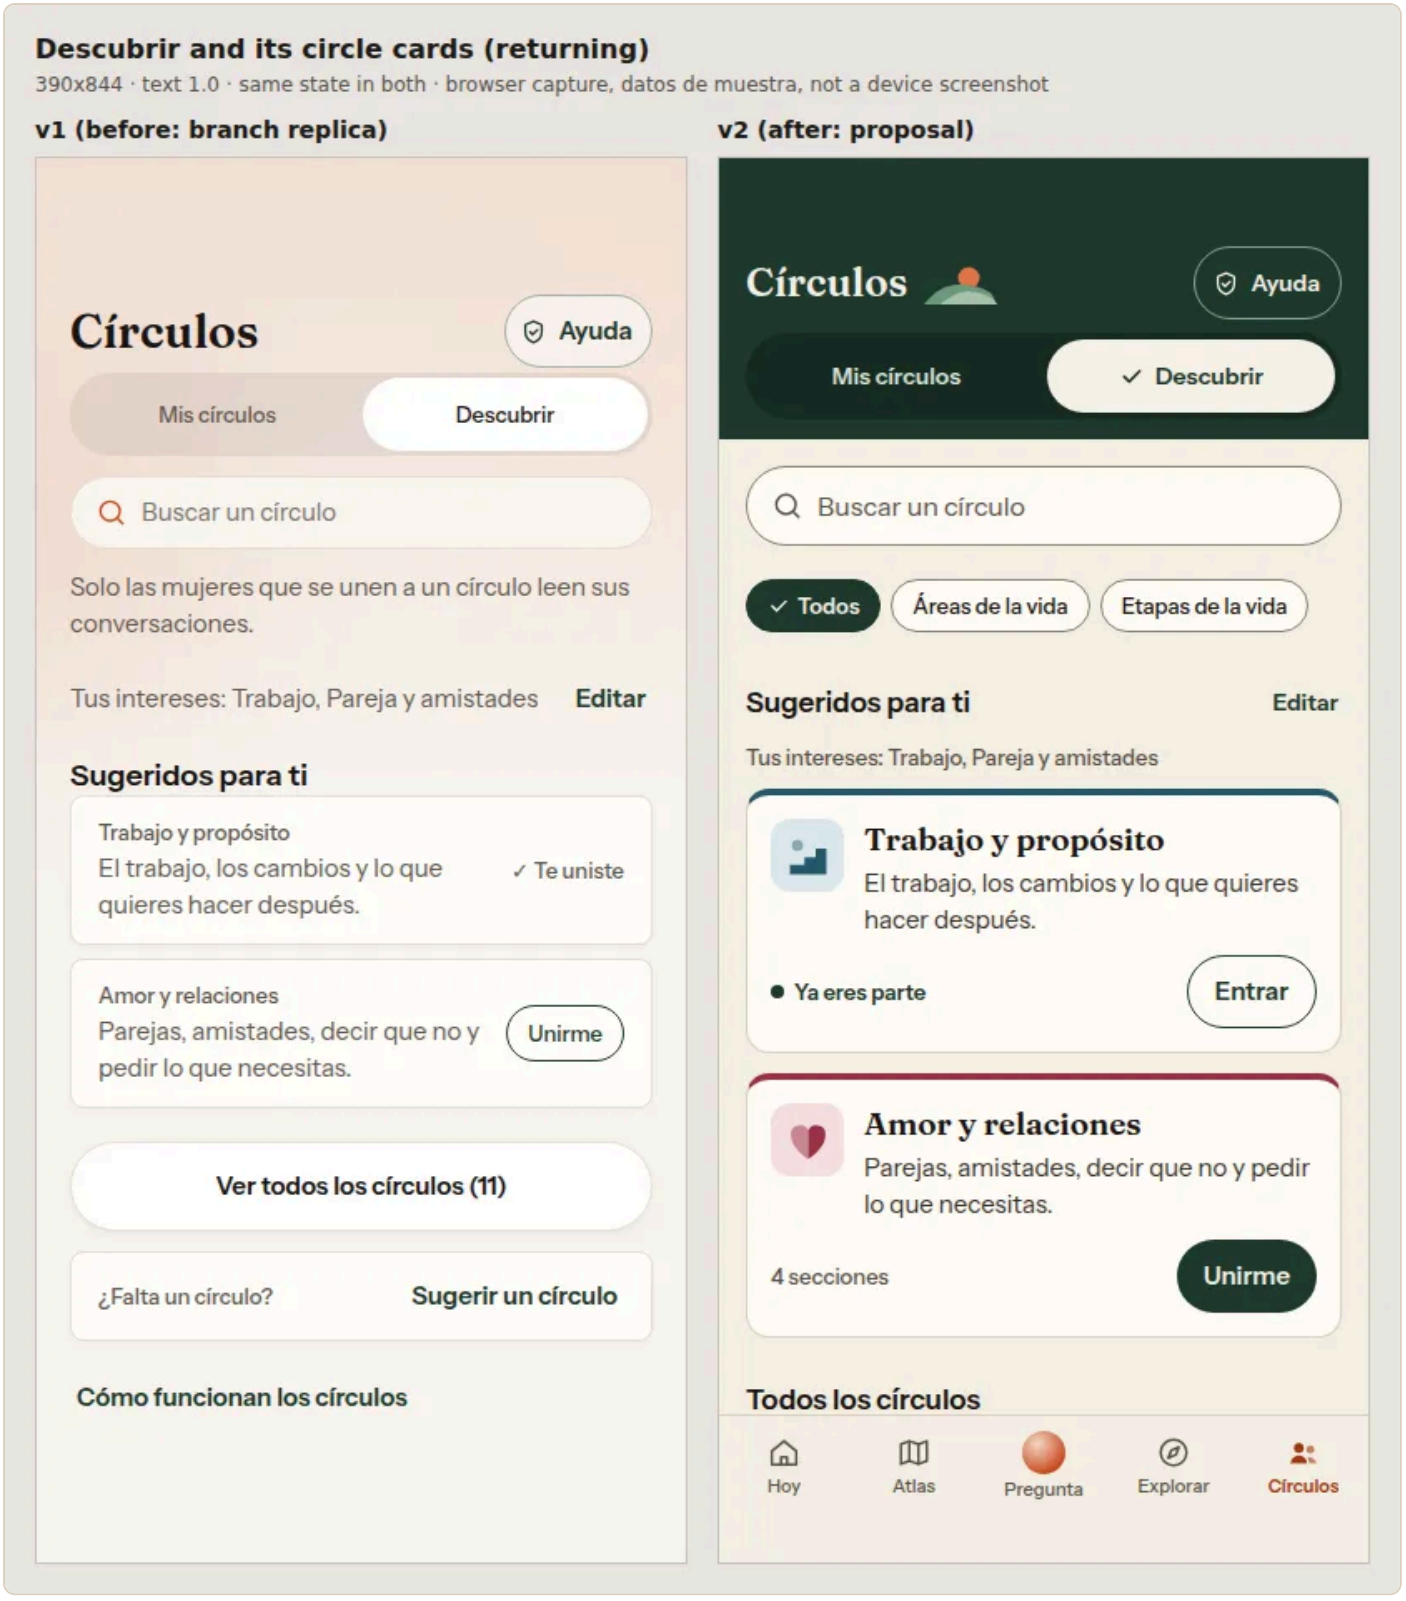

Returning member, 390×844. Shortcuts replace the long rows; conversations start in the first screen; the new reply is a marker on its card, not a separate list.

2. Descubrir and its circle cards

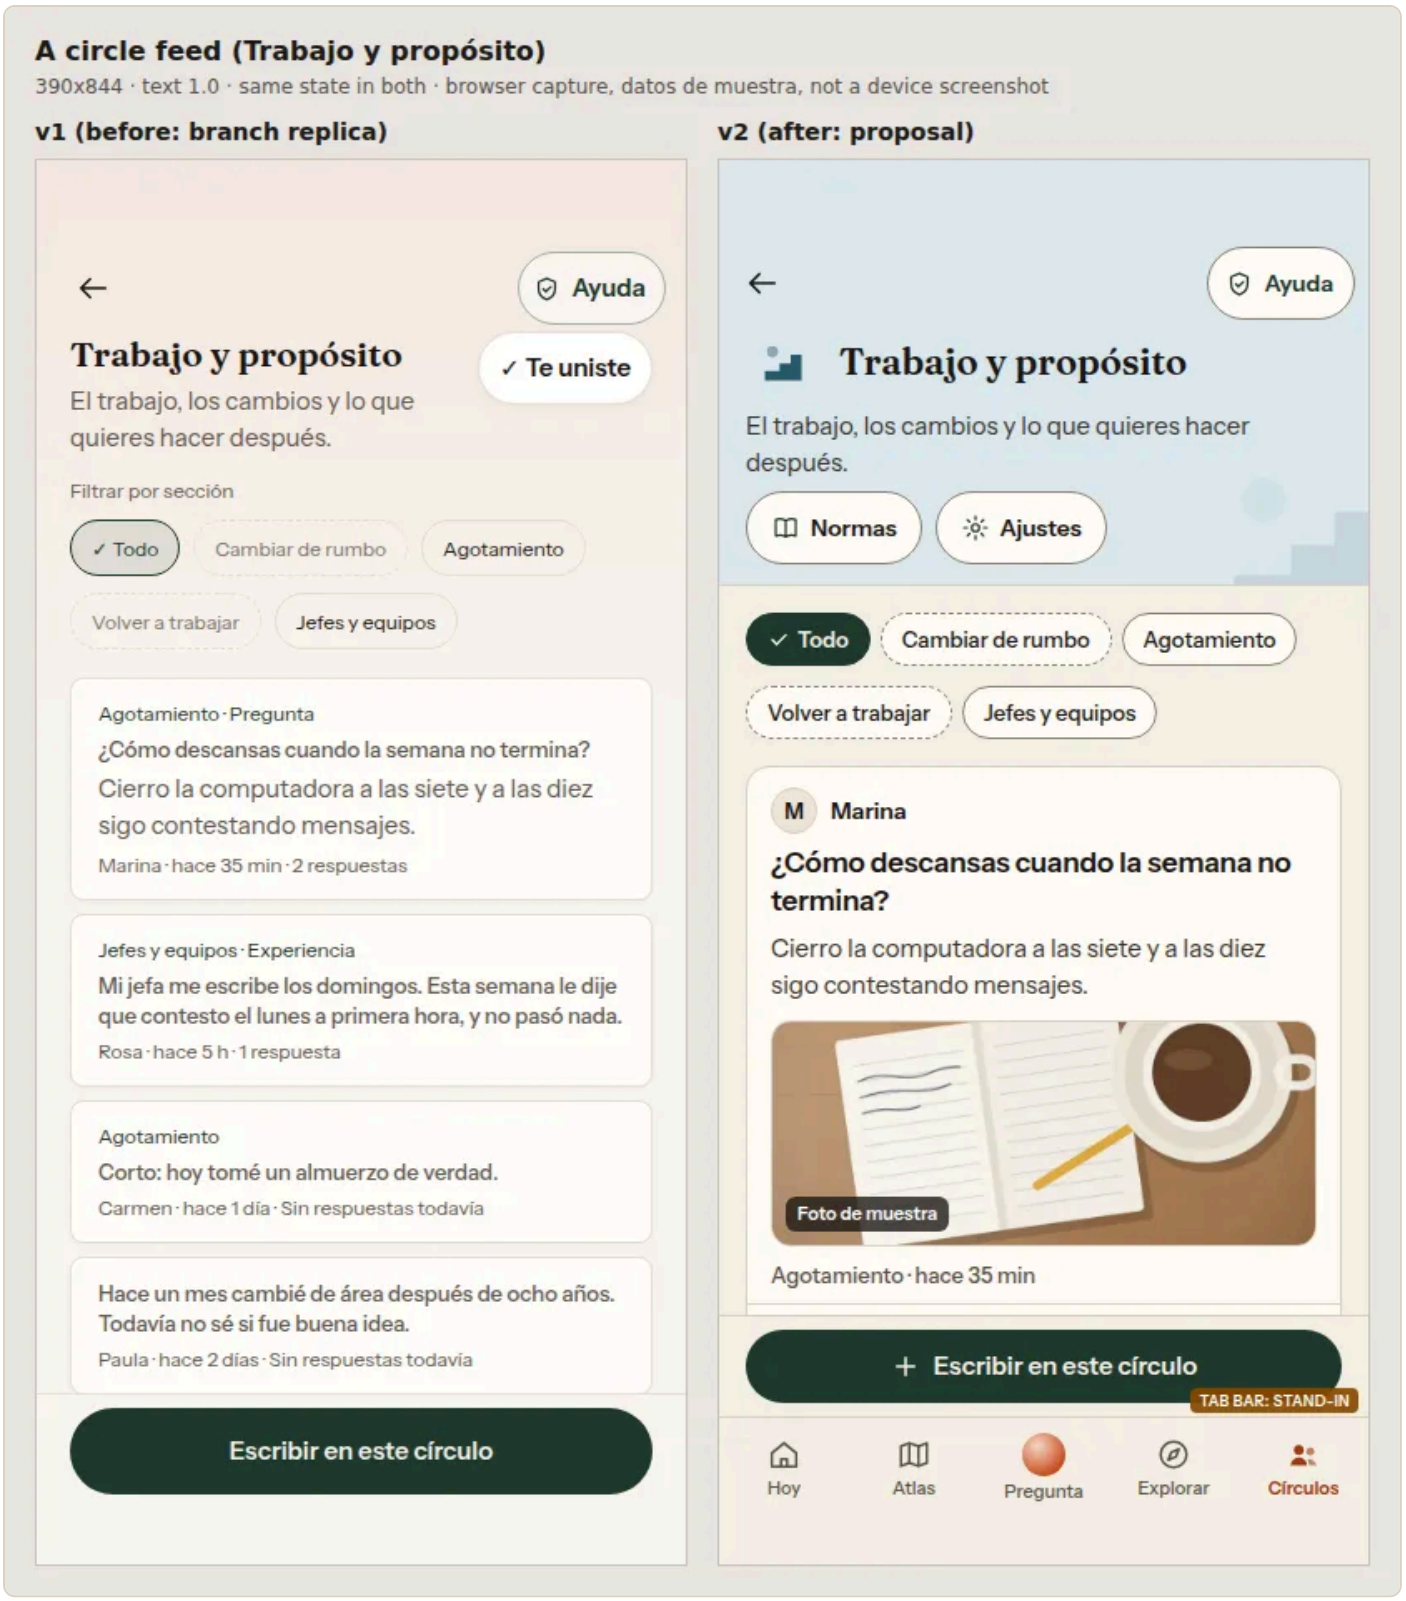

First visit. «Encuentra tus círculos», then spacious single-column cards, each with its accent, symbol, name, description and «Unirme».

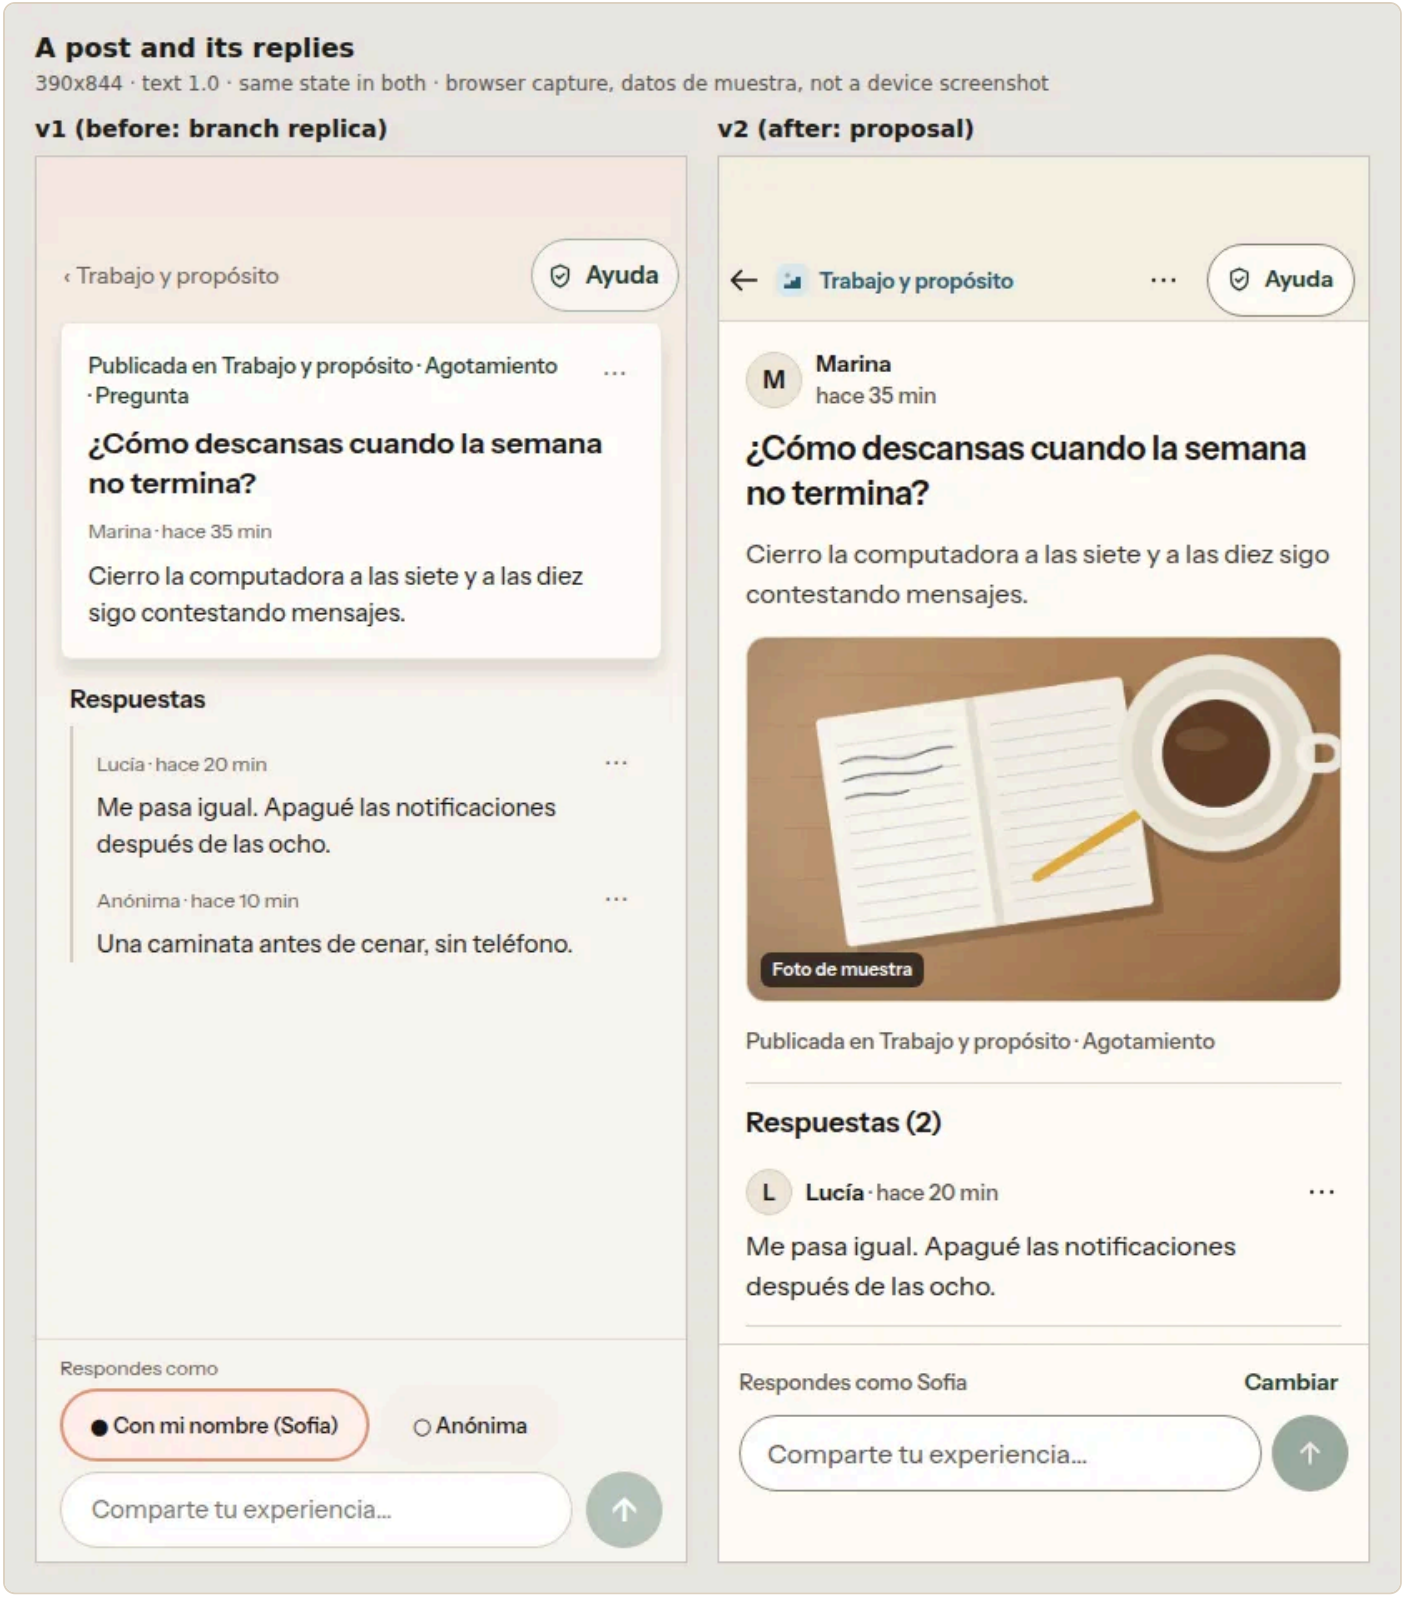

Returning member. Membership («Ya eres parte», «Entrar») is shown separately from the join action. Filters read as filters.

3. A circle feed

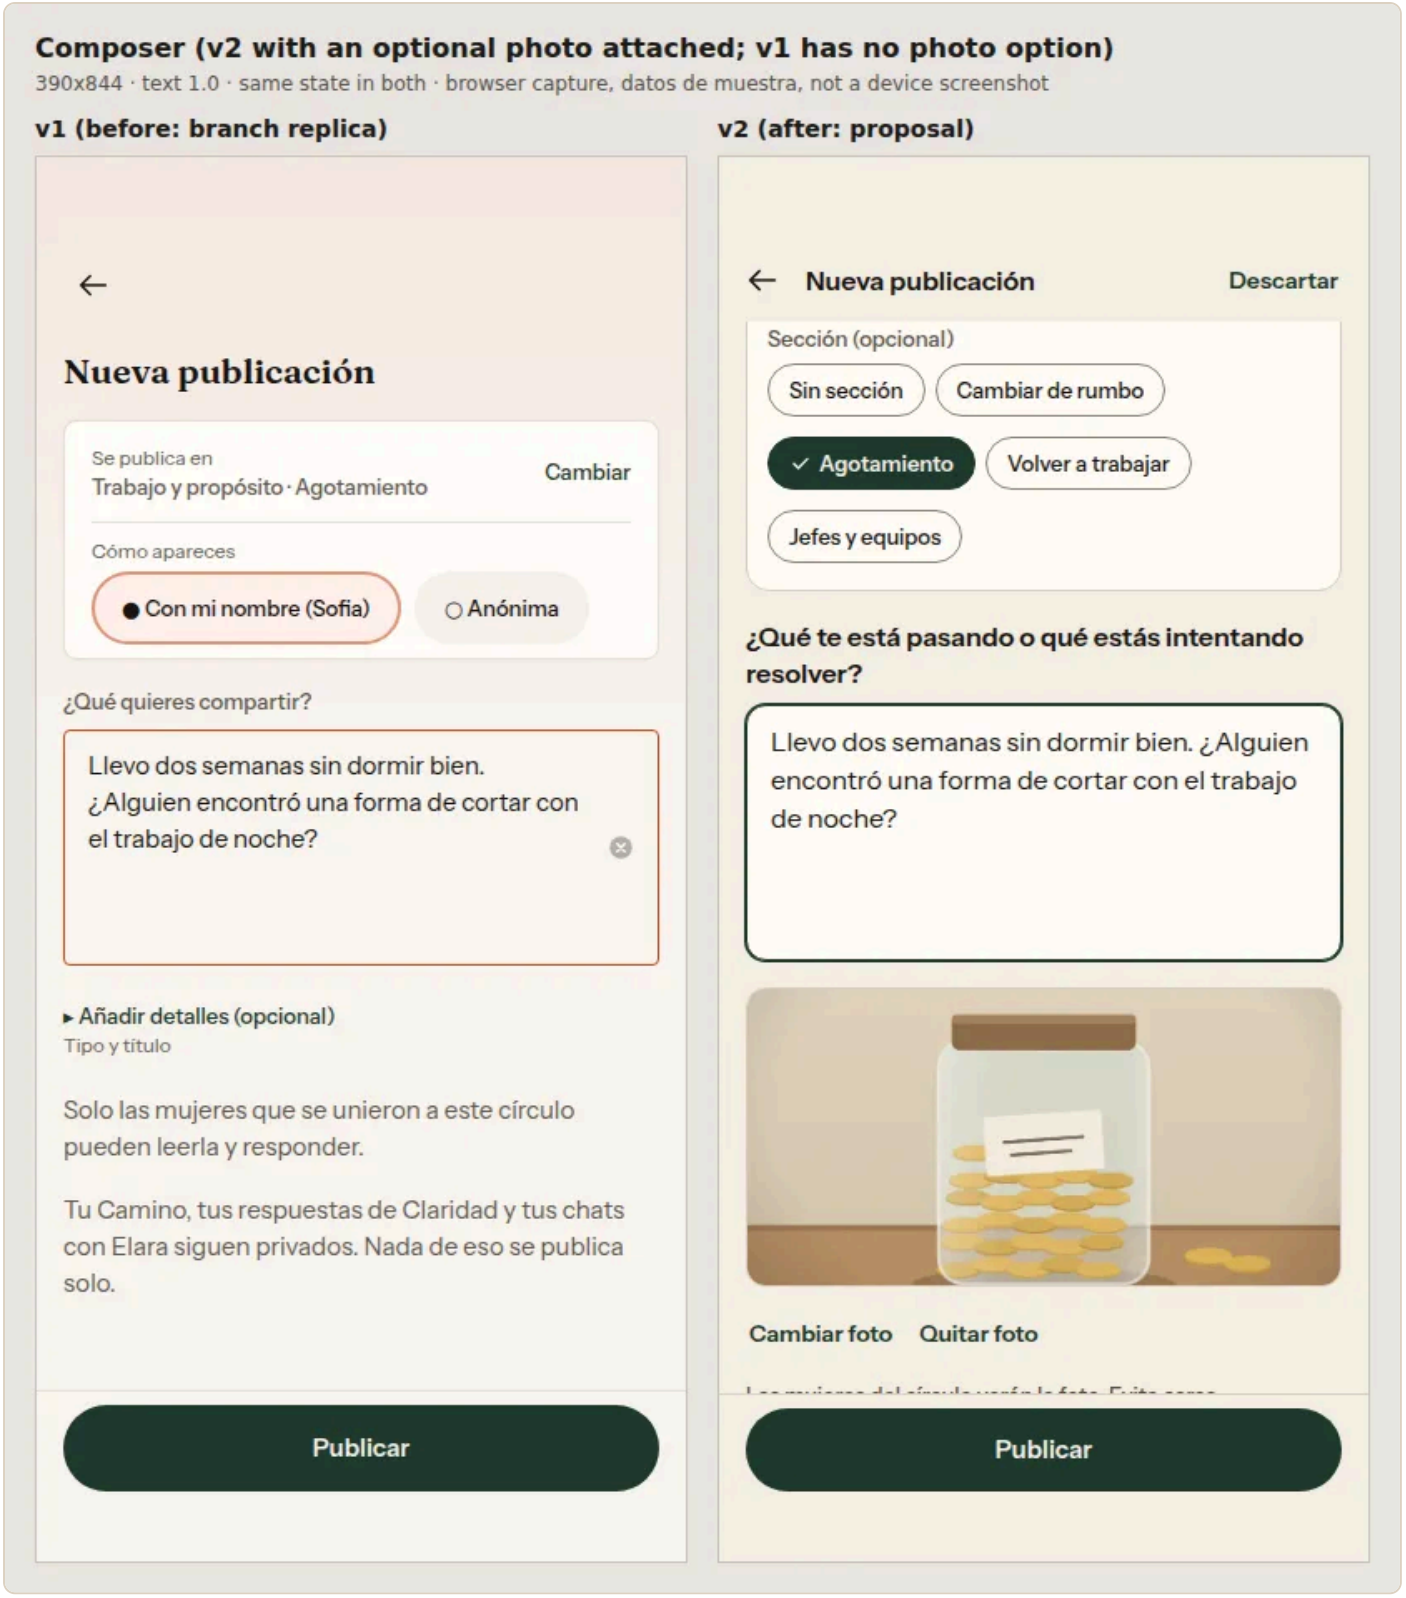

Trabajo y propósito. Accent header with «Normas» and «Ajustes»; filters with an unmistakable selected state; one posting action above the tab bar. The tab bar here is a stand-in: in the branch this screen is pushed over the tabs.

4. A post and its replies

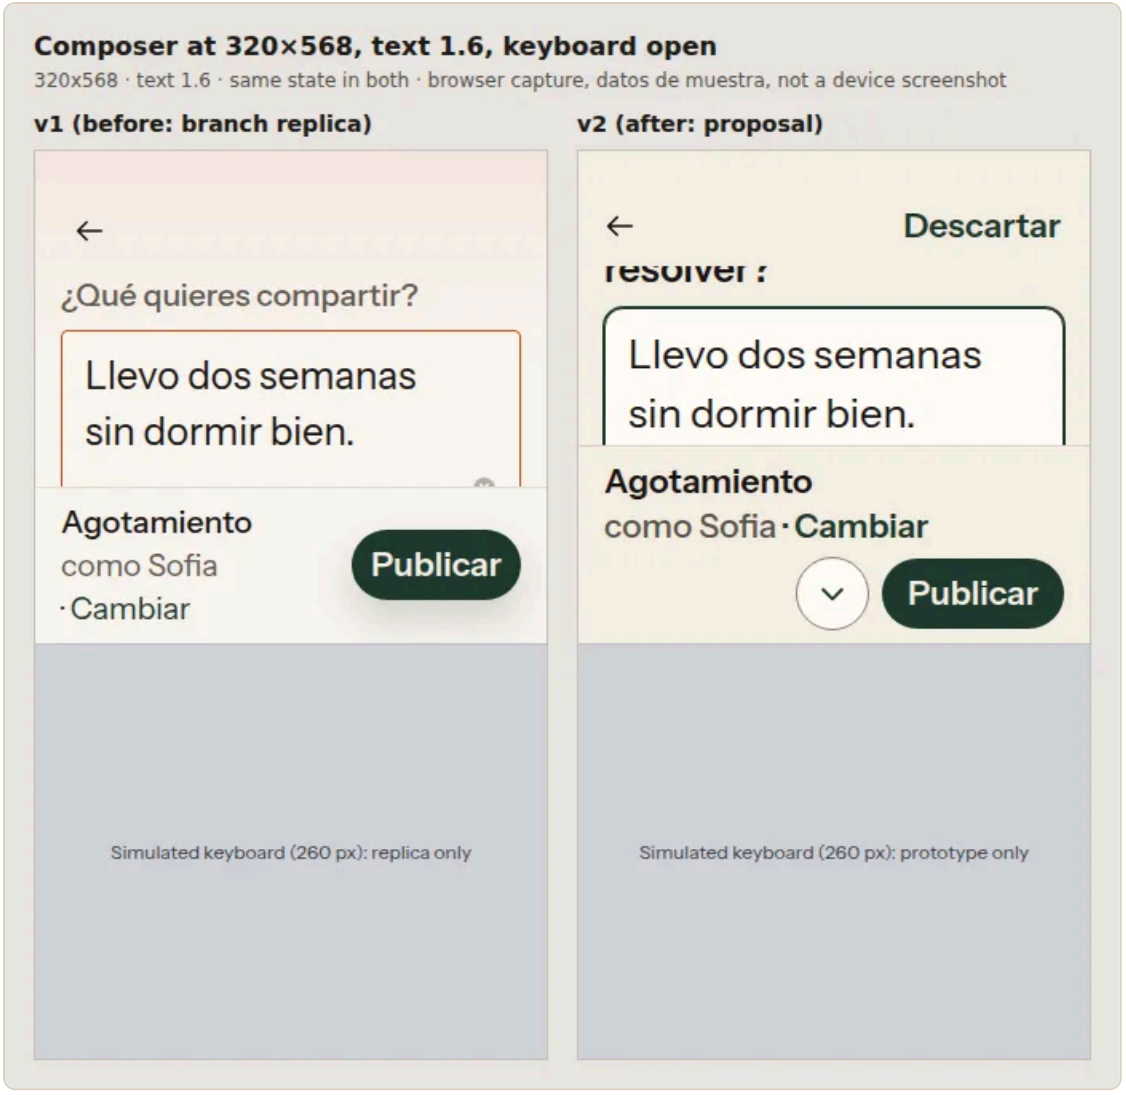

Conversation. The conversation leads; «Publicada en…» is a small supporting line; replies are readable and the reply bar is compact.

5. The composer with an optional photo

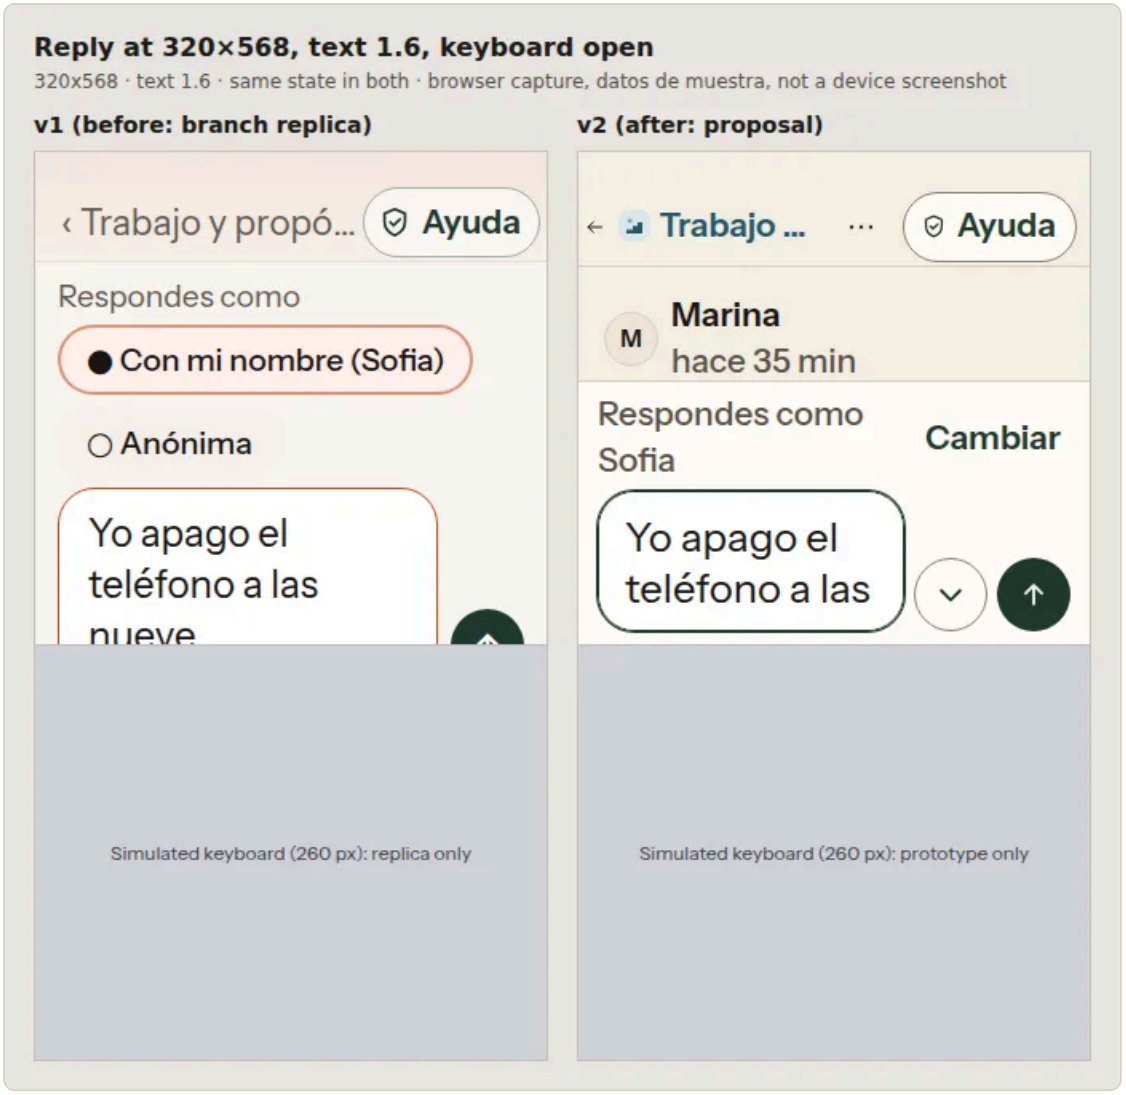

Composer. The circle and section already chosen; the new prompt; a bounded photo preview with «Cambiar foto» and «Quitar foto». v1 had no photo option. The photo is a sample still life and uploading is simulated.

6. 320 px, text 1.6, keyboard open

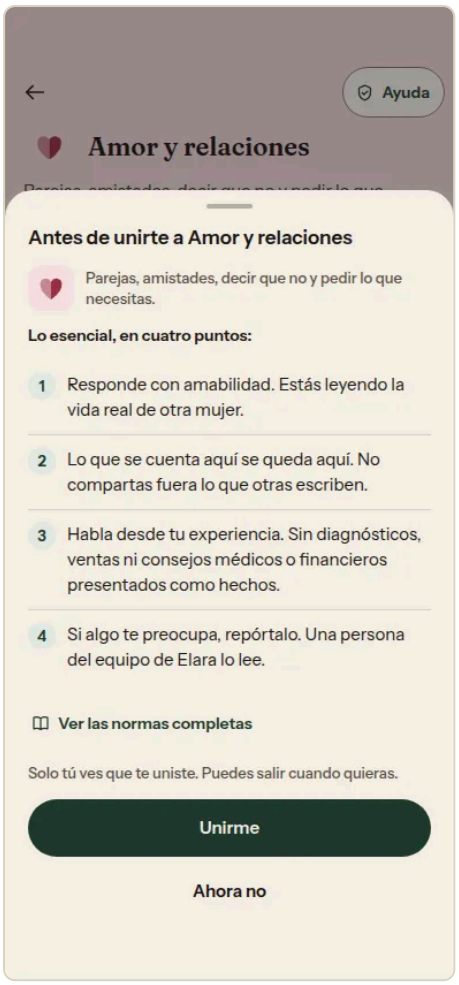

Composer. The bar keeps «Publicar», «Ocultar teclado» and the destination summary reachable. Tight: about two lines of the message stay visible.

Reply. v1 lost the field's lower edge and most of the bar. v2 folds the name choice to one line and keeps the field, «Ocultar teclado» and send on screen.

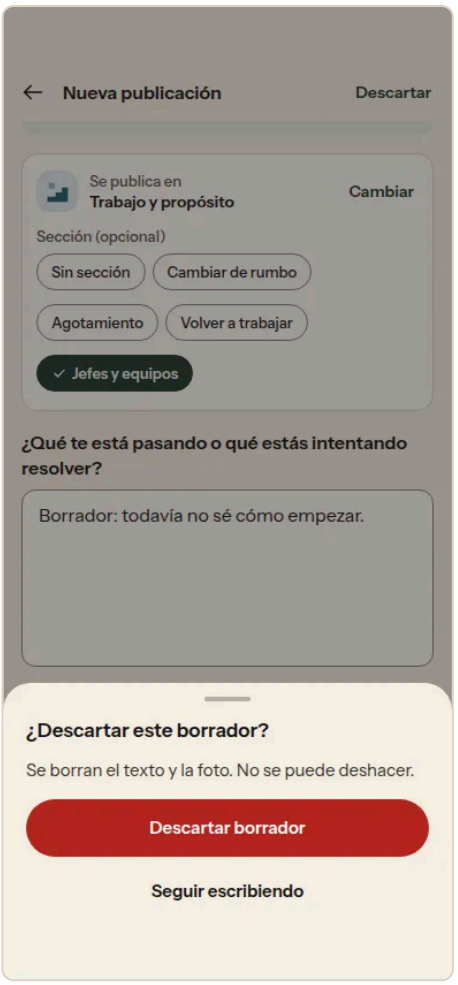

Flows in v2

Rules at join. Four points, «Ver las normas completas», «Unirme», «Ahora no». Nothing is recorded (open decision).

After joining. She lands inside the circle with «Te uniste a …».

Discarding a draft. An explicit confirmation before the text and photo are deleted.

Anonymity: decision needed

The team can see who wrote an «Anónima» post in more cases than a report. Verified in the branch code:

- Any admin account sees the real author of a reported item in the report queue (`routes/admin/moderation.ts`, `services/circleTopics.ts:717`).
- The named safety readers see the author and full text of anything the safety screen flags, including posts published normally with no report (`services/safety/index.ts`, `routes/admin/safety.ts`).
- Serious safety alerts go by email and Slack with the author's ID; the most serious also go to Kara.
- There is no access rule beyond being an admin, and no log of who looked.

Current copy: «Las demás ven «Anónima».», and the branch test (`circleTopics.test.ts:35`) requires exactly that and forbids phrases like «quién la escribió». The v2 copy (BORRADOR) states the real access without promising any safeguard: «Las demás ven «Anónima». El equipo de Elara puede ver quién la escribió, por ejemplo si alguien la reporta o si la revisión de seguridad la marca.» It would fail that test; the test was not edited.

Options: keep the access, use the accurate copy and change the test; build an access rule and a read log first; or collect and show less (for example no author ID in alerts), then reword.

Backend work before photos ship

- Private storage with short-lived links for circle members only; never the public assets route.
- Checks on file type, size, dimensions and one photo per post.
- Strip location and camera data and re-encode on the server.
- Automated and human image moderation, with a held state.
- No user ID in storage keys or links, and no uploader metadata. The existing practice-photo storage puts the user ID in the key, which would expose anonymous authors.
- Delete photos on takedown and account deletion; photo reporting; rate limits.

Reusable pieces in the branch: the image picker with re-encode (`lib/imagePicker.ts`), the `PhotoInput` status model, the `uploadImageInput` schema and `IMAGE_TYPES`.

Other open decisions

DECISION	WHO
Whether the rules step at join records an acceptance	Owner
Showing section names before joining	Owner
Tab bar on the circle screen	Design, engineering
No title and no post type in the composer	Owner
Where drafts live on the phone; one draft or one per circle	Design, engineering
Optional photo description for screen readers	Design, Alejandra
Retry key now includes the photo (possible second post after a silent success)	Engineering, owner
No per-circle mute; the «Actividad del círculo» hint in Ajustes still mentions reflections	Owner, engineering, Alejandra
Adopt the circle accents and symbols, and the darker red, terracotta and metadata tokens	Design system

Old posts without a section stay only under «Todo»	Owner, engineering
Anonymous authors can be reported but not blocked	Owner
Reporting a post replaces the conversation at once	Design, owner
All new Spanish copy	Alejandra

Checks

390 of 390 flow checks pass across 320, 375 and 390 px at normal and 1.6× text: joining with the rules sheet; posting with and without a photo, named and anonymous, failure and retry, no duplicates, drafts restored to the right place and discard; replying. No sideways scrolling, clipped text, undersized target or AA contrast failure. «Publicar» reachable in 60 of 60 composer checks; the reply field, send and «Ocultar teclado» reachable with the keyboard open.

Simulated, not device-tested: the server and network, photo upload, moderation hold and failures (reviewer switches), the 260 px keyboard, text scaling, device insets, drafts kept in page memory, the stand-in tab bar and icons, «Ayuda» and the crisis lines. No phone, real keyboard or screen reader was used. All people, posts and photos are sample data; the circles and sections are the real catalogue.
