V3.2 / SEVEN-DAY PILOT / ENGLISH

You come with a question. You leave with a rule you can use.

The seven days as she would see them, screen by screen. Based on the English V3.1. The Spanish edition is the source copy and needs María’s and Alejandra’s approval.

Day	Topic	Today’s rule
1	One bill, one date, one clearer answer	Before counting future income, confirm when it arrives.
2	What is saving for, and what is investing for?	Money for a payment due soon shouldn’t depend on an investment going up.
3	Before saying yes	You can want to help and take time to check what you can manage.
4	Why paying 20 doesn’t always cut debt by 20	Look separately at the balance, the charges and the payment.
5	Why the same amount buys less	The same amount can buy less when prices rise.
6	When an offer promises too much	High gains, “no risk” and pressure: pause and check before sending money.
7	One rule to take with you	The one she chooses, in her own words if she wants.

How to read this document

- Each day has four screens. What’s inside the frame is what she sees or hears.
- Lines starting “If she taps…” appear only in that case.
- “(supported answer)” is for review only: the app doesn’t mark it before she chooses.
- Under each day: what to check and what changed from V3.1.

What changed from V3.1

- No script gives away the answer before the question (days 1, 2, 4 and 5).
- One rule per day: the same at the start, at the close and on day 7.
- “Not sure, show me” on every question: she learns without having to guess.
- Each day opens with yesterday’s rule in one line: a short recall that helps it stick.
- “If you want to try it”: one optional idea to use outside Elara. Not a task; nobody asks about it later.
- “I have a different question” opens the text field: one path, not two.
- Day 3: her rehearsal phrase is the main action again. Day 7: two recall questions before she picks her rule.

What is still a hypothesis

Whether it truly helps can only be shown by testing with real women. Everything runs on replies written in advance; nothing is AI-generated.

DAY 1 OF 7

One bill, one date, one clearer answer

See that promised money isn’t available money yet.

SCREEN 1 OF 4

DAY 1 OF 7

One bill, one date, one clearer answer

ELARA

Today we start with something concrete: one payment and the money that arrives before it. You can stay with the example.

TODAY’S RULE

Before counting future income, confirm when it arrives.

READ OR LISTEN · OPTIONAL AUDIO FROM ALE

Ana has US$300 today. She pays US$180 rent on day 5 and US$170 for electricity on day 12. A client owes her US$200 and says they’ll pay on day 10, but it isn’t confirmed. Promised money isn’t available money yet. Looking at the dates lets you see a gap before it arrives.

Today US$300 in the account.

Day 5 Rent: US$180.

Day 12 Electricity: US$170. The client hasn’t paid yet.

Continue

SCREEN 2 OF 4

TRY AN IDEA

The client pays on day 14. What happens on day 12, after rent and before the payment arrives?

She’s US$50 short for electricity. (supported answer)

ON TAP Yes. US$300 − US$180 = US$120. Electricity costs US$170: she’s US$50 short until the client pays.

US$150 is left after electricity.

ON TAP That counts the US$200 before it arrives. On day 12 it isn’t there yet.

US$120 is left after electricity.

ON TAP US$120 is what’s left before paying it. For the US$170 electricity bill, she’s US$50 short.

Not sure, show me.

ON TAP After rent, US$120 is left (300 − 180). Electricity is US$170, so on day 12 she’s US$50 short. The day-14 payment arrives too late for that bill.

DAY 1 OF 7 / SCREENS 3 AND 4

SCREEN 3 OF 4

MAKE IT USEFUL

Which is closest to your situation today?

- I don’t really know when I get paid
- I don’t want to open my accounts today
- The problem is I don’t have enough
- I have a different question

Note: “Prefer to skip” is always visible.

If she taps “I don’t really know when I get paid”

ELARA
Then that date is unconfirmed. Before counting that money toward a payment, find out when it will be in your account. A question to keep: “What day will the money be in my account?”

If she taps “I don’t want to open my accounts today”

ELARA
Stay with Ana. Her US$200 arrives after the electricity payment, so that day she’s US$50 short. You can learn the idea without opening your accounts.

If she taps “The problem is I don’t have enough”

ELARA
Looking at dates doesn’t create money. It does help separate two questions: does money arrive after the payment, or is there a shortfall even counting everything coming in? They’re different problems, and neither is solved by being told to get more organised.

If she taps “I have a different question”

Your question (optional)

Write your question

ELARA
Thank you. Today’s explanation covers the gap between dates. Your question is saved as open; we won’t treat it as answered.

SCREEN 4 OF 4

YOU TAKE AWAY

YOU TAKE AWAY
Before counting future income, confirm when it arrives.

IF YOU WANT TO TRY IT
Look at your next payday and notice which payments leave before that date.

Note: She can save the rule without adding personal details.

Save my rule | Finish without saving

Tomorrow: what saving is for, what investing is for, and when you need the money.

Reviewer: what to check

Can she say the rule in her own words? Do the amounts feel realistic for the group?

What changed from V3.1

- The script no longer says “US$120 is left and there’s a gap of fifty” before the question.
- One rule: screen 1 now matches the close.
- “Not sure, show me” instead of a “Skip” that reveals the answer.
- “If you want to try it” at the close.

DAY 2 OF 7

What is saving for, and what is investing for?

See how a decision changes with when you need the money.

SCREEN 1 OF 4

DAY 2 OF 7

What is saving for, and what is investing for?

ELARA

Yesterday: before counting future income, confirm when it arrives. Today: how a decision changes with when you need the money.

TODAY'S RULE

Money for a payment due soon shouldn't depend on an investment going up.

READ OR LISTEN · OPTIONAL AUDIO FROM ALE

Saving means setting money aside. Investing seeks a gain and accepts that value can fall. A goal years away leaves more time to learn about other options and their risks. A payment due soon leaves little time. Paula needs US$300 for a move in four weeks. First, give money a purpose and a timeframe.

Soon A move in four weeks.

Years away More time for ups and downs.

First What for, and by when?

Continue

SCREEN 2 OF 4

TRY AN IDEA

Paula needs US$300 to move in four weeks. One option can lose value. What should she check first?

Whether she'll have the amount she needs on the payment date. (supported answer)

ON TAP Yes. With so little time, what matters is that the money is there that day, even if something falls.

Whether a past gain guarantees she'll have the US$300.

ON TAP A good past result doesn't guarantee the value on that date.

How much she could earn if everything goes well.

ON TAP A possible gain doesn't say what happens to her move if the value falls.

Not sure, show me.

ON TAP First, whether she'll have the US$300 on moving day. With four weeks, a fall may not recover in time.

DAY 2 OF 7 / SCREENS 3 AND 4

SCREEN 3 OF 4

MAKE IT USEFUL

What would you like to focus on today?

- I want to learn to invest
- I want a cushion so I have more options
- I can’t save right now
- I have a different question

Note: “Prefer to skip” is always visible.

If she taps “I want to learn to invest”

ELARA

Before choosing an investment, ask: “What is this money for, and when will I need it?” You can learn without risking money meant for a payment due soon.

If she taps “I want a cushion so I have more options”

ELARA

A cushion gives you room for something unexpected, or time to decide. To give it a purpose: “What would I like to be able to handle without having to find money in a hurry?”

If she taps “I can’t save right now”

ELARA

You can learn the difference with Paula even if you can’t set money aside today. Wanting to learn and having money to save are different things.

If she taps “I have a different question”

Your question (optional)

Write your question

ELARA

Paula needs US$300 in four weeks: first, check whether she’ll have it that day. Your question is saved as open.

SCREEN 4 OF 4

YOU TAKE AWAY

YOU TAKE AWAY

Money for a payment due soon shouldn’t depend on an investment going up.

IF YOU WANT TO TRY IT

Think of some money you have or want to have, and give it a purpose and a timeframe.

Note: She can save the rule without adding personal details.

Save my rule | Finish without saving

Tomorrow: what to say before taking on a money commitment.

Reviewer: what to check

Can she explain the difference and why the timeframe changes the question? Which word does the group use for a cushion?

What changed from V3.1

- The script no longer says “having that amount on that date matters” before the question.
- The cushion reply no longer talks about “asking for money”.
- “Not sure, show me” and “If you want to try it”.

DAY 3 OF 7

Before saying yes

Separate what she wants to offer from what she can manage, and rehearse her own response.

SCREEN 1 OF 4

DAY 3 OF 7

Before saying yes

ELARA

Yesterday: money for a payment due soon shouldn’t depend on an investment going up. Today: separate what you want to offer from what you can manage, and rehearse a response.

TODAY’S RULE

You can want to help and take time to check what you can manage.

READ OR LISTEN · OPTIONAL AUDIO FROM ALE

Wanting to help and being able to give an amount are different questions. For the second, look at the money you have and the payments you need to cover before you’re paid again. Marta has US$200 and needs US$150 for those payments. The calculation shows a consequence; it doesn’t decide how much she cares or what she should say.

I want What I’d choose to offer.

I can What would stay covered.

I reply My own words.

Continue

SCREEN 2 OF 4

TRY AN IDEA

Someone asks Marta for US$100. Explore a response: each shows a consequence. There’s no right answer.

“I need to check my payments before naming an amount.”

ON TAP It buys time without promising an amount. The decision stays open.

“This time I can offer US$50.”

ON TAP That leaves US$150, exactly her payments. It doesn’t prove it’s the right amount: there may be other commitments.

“Yes, I’ll give you the US$100.”

ON TAP That leaves US$100 for US$150 of payments: she’s US$50 short. If it’s what she wants, she can decide knowing that gap.

“This time I won’t give money.”

ON TAP She keeps the US$200. The calculation doesn’t say how she’ll feel or how the other person will react.

DAY 3 OF 7 / SCREENS 3 AND 4

SCREEN 3 OF 4

MAKE IT USEFUL

What could make you say yes before you know whether you can?

- I worry about seeming selfish
- I already help every month
- I worry about their reaction
- None of these, I prefer the example

Note: “Prefer to skip” is always visible.

If she taps “I worry about seeming selfish”

ELARA
If you knew the other person wouldn’t be disappointed, what would you want to offer? You could start with: “I want to think about it and check my payments before naming an amount.”

If she taps “I already help every month”

ELARA
You can want to keep helping and still check what you can sustain. For example: “I want to keep helping; I need to see what amount I can sustain.”

If she taps “I worry about their reaction”

ELARA
You don’t have to rehearse a conversation today. Your phrase can stay private while you think about what support would help you feel safer.

If she taps “None of these, I prefer the example”

ELARA
Marta can ask for time without promising money: “I need to check my payments before naming an amount.” That’s a complete answer.

Your phrase to rehearse

I need to check my payments before naming an amount.

Note: Prefilled with the example. She can edit it, change it or keep it. It stays private.

SCREEN 4 OF 4

YOU TAKE AWAY

ELARA
These are the words you chose: “[your phrase]”.

YOU TAKE AWAY
You can want to help and take time to check what you can manage.

IF YOU WANT TO TRY IT
Keep your phrase handy for the next time someone asks you for money. You don’t have to send it.

Save my phrase and the rule

Finish without saving

Note: On return, never ask whether she used it or say she set a boundary.

Tomorrow: why a payment can cut debt by less than you expect.

Reviewer: what to check

Does the question create recognition without blaming family? Does the phrase sound like something she’d really say? Does “Yes, I’ll give you the US$100” feel respected as an option?

What changed from V3.1

- One rule, V3.1’s warmer one: “You can want to help and take time…”.
- “None is the morally correct answer” becomes “There’s no right answer”. Amounts in US$.
- New option “Yes, I’ll give you the US$100”: saying yes is a choice too, and the calculation shows the gap.
- The rehearsal phrase is the main action again, prefilled with the example.

DAY 4 OF 7

Why paying 20 doesn’t always cut debt by 20

Tell the payment she makes apart from how much the debt falls when there’s interest.

SCREEN 1 OF 4

DAY 4 OF 7

Why paying 20 doesn’t always cut debt by 20

ELARA

Yesterday: you can want to help and take time to check what you can manage. Today: why a payment can cut debt by less than you expect. You don’t need to open your statement.

TODAY’S RULE

Look separately at the balance, the charges and the payment.

READ OR LISTEN · OPTIONAL AUDIO FROM ALE

In this fictional statement, the balance starts at US$100. An interest charge of US$10 is added, then a payment of US$20 is applied. There are no purchases or other charges. Interest is what it costs to use borrowed money. You don’t need to work out your card’s rate today: just see what changed.

Starting balance US$100

Interest + US$10

Payment − US$20

Continue

SCREEN 2 OF 4

TRY AN IDEA

With only those entries, how much is still owed?

US$80

ON TAP That subtracts the payment but leaves out the interest. The full calculation gives US$90.

US$90 (supported answer)

ON TAP Yes: US$100 + US$10 − US$20 = US$90. You paid twenty, but the debt fell by ten.

US$110

ON TAP That’s the balance with interest, before the payment is applied.

Not sure, show me.

ON TAP First the interest is added: US$100 + US$10 = US$110. Then the payment is subtracted: US$110 − US$20 = US$90. You paid twenty, but the debt fell by ten.

DAY 4 OF 7 / SCREENS 3 AND 4

SCREEN 3 OF 4

MAKE IT USEFUL

What would you like to understand better?

- I pay but the debt doesn’t seem to fall
- I don’t really know what interest is
- I have no debt, I’ll use the example
- I have a different question

Note: “Prefer to skip” is always visible.

If she taps “I pay but the debt doesn’t seem to fall”

ELARA
The example shows one possible reason: US$10 of interest was added before the payment. For your account, a useful question: “How much of my payment lowered the balance, and what charges were added?”

If she taps “I don’t really know what interest is”

ELARA
It’s what it costs to use borrowed money. In the example, US$10 is added before the US$20 payment is subtracted: US$90 is left.

If she taps “I have no debt, I’ll use the example”

ELARA
Keep the calculation: US$100 + US$10 − US$20 = US$90. It’s fictional; each contract calculates interest and applies payments its own way.

If she taps “I have a different question”

Your question (optional)

Write your question

ELARA
Your question is saved as open. We don’t need your account details.

SCREEN 4 OF 4

YOU TAKE AWAY

YOU TAKE AWAY
Look separately at the balance, the charges and the payment.

IF YOU WANT TO TRY IT
On your next statement, find the interest line and compare it with what you paid.

Note: She can save the rule without adding personal details.

Save my rule | Finish without saving

Tomorrow: why the same amount can buy less.

Reviewer: what to check

Does the difference between paying and the debt falling answer a question she recognises? Is “statement” the word the group uses?

What changed from V3.1

- The script no longer gives the ending balance or “you paid twenty, but the debt fell by ten” before the question; that line moves into the explanation.
- The closing rule is no longer the story of the example: it’s a rule that works for any account.
- “Not sure, show me” and “If you want to try it”.

DAY 5 OF 7

Why the same amount buys less

Understand that each price rise is calculated on a price that has already risen.

SCREEN 1 OF 4

DAY 5 OF 7

Why the same amount buys less

ELARA

Yesterday: look separately at the balance, the charges and the payment. Today: what happens when your money stays the same and prices rise. The percentage is an example.

TODAY'S RULE

The same amount can buy less when prices rise.

READ OR LISTEN · OPTIONAL AUDIO FROM ALE

Inflation is a general rise in prices. If your money stays the same while prices rise, you buy less. A fictional basket costs US$100 today. If its price rises 10%, next year it costs US$110: your same US$100 no longer covers the whole basket. And if it rises another 10% the year after?

Today Basket: US$100.

Year 1 +10%: US$110.

Year 2 +10% again: ?

Continue

SCREEN 2 OF 4

TRY AN IDEA

How much will the basket cost at the end of year two?

US$110

ON TAP That's year one. The second rise is calculated on US$110.

US$120

ON TAP That adds US$10 each year. But the second 10% is calculated on US$110: that's US$11.

US$121 (supported answer)

ON TAP Yes: US$100 × 1.10 × 1.10 = US$121. The same percentage applies to a price that has already risen.

Not sure, show me.

ON TAP Year 1: US$100 + US$10 = US$110. Year 2: 10% of US$110 is US$11, so US$110 + US$11 = US$121.

DAY 5 OF 7 / SCREENS 3 AND 4

SCREEN 3 OF 4

MAKE IT USEFUL

What would you like to look at more closely?

- I feel my money doesn’t go as far
- I didn’t understand why it’s US$121
- Prices change very fast where I live
- I have a different question

Note: “Prefer to skip” is always visible.

If she taps “I feel my money doesn’t go as far”

ELARA
In the example, the money stays at US$100 while the basket costs US$121. The same balance no longer covers the whole basket. The 10% explains the calculation; it isn’t your country’s inflation rate.

If she taps “I didn’t understand why it’s US$121”

ELARA
After the first rise it costs US$110. The second 10% is calculated on US$110, which is US$11. So US$110 + US$11 = US$121.

If she taps “Prices change very fast where I live”

ELARA
The 10% is an example. The idea works with any percentage: each rise is calculated on a price that has already risen, so it builds up.

If she taps “I have a different question”

Your question (optional)

Write your question

ELARA
The second rise is calculated on US$110, not US$100. Your question is saved as open.

SCREEN 4 OF 4

YOU TAKE AWAY

YOU TAKE AWAY
The same amount can buy less when prices rise.

IF YOU WANT TO TRY IT
Think of something you always buy and compare today’s price with a year ago.

Note: She can save the rule without adding personal details.

Save my rule | Finish without saving

Tomorrow: how to check an offer that promises too much.

Reviewer: what to check

Does she remember the mechanism or just a number? Does 10% a year feel low or high for the group?

What changed from V3.1

- The script no longer says US$121 before the question.
- New option: “Prices change very fast where I live” (new copy, to review).
- “Not sure, show me” and “If you want to try it”.

DAY 6 OF 7

When an offer promises too much

Practise checking an offer independently before sending money.

SCREEN 1 OF 4

DAY 6 OF 7

When an offer promises too much

ELARA

Yesterday: the same amount can buy less when prices rise. Today: practise checking an offer before sending money.

TODAY'S RULE

High gains, "no risk" and pressure: pause and check before sending money.

READ OR LISTEN · OPTIONAL AUDIO FROM ALE

Imagine this message: "20% a month, no risk. Send money today. Earn more by bringing friends." The promise and the pressure are reasons to pause. Someone you trust sending it doesn't make it safe. Find your country's financial regulator yourself and check the company's name and details. The seller's screenshots and links aren't enough.

Promise "20% a month, no risk." Fictional example.

Pressure "Today only; bring friends."

Check Yourself, in an official source.

Continue

SCREEN 2 OF 4

TRY AN IDEA

Which step checks the offer without relying only on the seller?

Read more screenshots from the same group.

ON TAP The group's screenshots repeat what the offer shows; they don't check it.

Send a little to see what happens.

ON TAP Testing with money doesn't show who's behind it or remove the risk. Some offers pay out at first to win trust.

Look up the company on the financial regulator's official site. (supported answer)

ON TAP Yes. Find the official site yourself and compare the name and details. Careful: someone can impersonate a registered company, and being registered doesn't guarantee gains.

Not sure, show me.

ON TAP What works is checking on your own, outside the group: look up the company on your country's financial regulator's official site.

DAY 6 OF 7 / SCREENS 3 AND 4

SCREEN 3 OF 4

MAKE IT USEFUL

What would you like to look at in this case?

Someone I trust sent it | I need money quickly | I already sent money and I’m worried | I prefer the example | I have a different question

Note: “Prefer to skip” is always visible.

If she taps “Someone I trust sent it”

ELARA
You can value that person and check the offer separately. Sharing it doesn’t mean they checked who receives the money.

If she taps “I need money quickly”

ELARA
That need is real. Pressure to decide today makes checking harder. You can reply: “I need to look at this calmly before deciding.”

If she taps “I already sent money and I’m worried”

ELARA
You don’t need to share details here. If you suspect a scam, contact the bank or service you used to pay promptly and ask what options exist. You can leave the exercise and look for official help in your country.

If she taps “I prefer the example”

ELARA
The message combines high gains, “no risk”, pressure and a reward for bringing people. That calls for checking. WhatsApp or crypto alone don’t prove fraud.

If she taps “I have a different question”

Your question (optional)

Write your question

ELARA
Before sending money, check yourself who receives it and what official information exists. Your question is saved; no names, contacts or screenshots needed.

SCREEN 4 OF 4

YOU TAKE AWAY

YOU TAKE AWAY
High gains, “no risk” and pressure: pause and check before sending money.

IF YOU WANT TO TRY IT
Next time you see an offer like this, look up the company yourself before replying.

Note: She can save the rule without adding personal details.

Save my rule | Finish without saving

Tomorrow: review two ideas and choose a rule to take with you.

Reviewer: what to check

Can she name one sign and one check without thinking every group or all crypto is fraud? Pending: which regulator to name in each country.

What changed from V3.1

- The rule is identical at the start and the close.
- “Registration doesn’t guarantee gains” and “someone can impersonate a registered company” move into the answer’s explanation, so the script is shorter.
- “Not sure, show me” and “If you want to try it”.

DAY 7 OF 7

One rule to take with you

Review two ideas from the week and choose the rule that helps her most.

SCREEN 1 OF 4

DAY 7 OF 7

One rule to take with you

ELARA
Yesterday: high gains, “no risk” and pressure: pause and check. There’s no new concept today: you review two ideas and choose a rule. You don’t need saved notes.

This week covered dates, what money is for, what you can manage, interest, prices and offers worth checking. First, two quick questions. Then you choose the rule that helps you most. You don’t have to show any change in your finances.

Start the review

SCREEN 2 OF 4

QUICK REVIEW

1. You get paid on day 14 and a payment goes out on day 12. Can you count that pay toward the payment?

Yes, it was promised.

ON TAP Promised isn’t received: it arrives on the 14th, after the payment on the 12th.

No: it arrives after the payment. (supported answer)

ON TAP Right. Before counting future income, confirm when it arrives. (Day 1)

Not sure, show me.

ON TAP The pay arrives on the 14th and the payment goes out on the 12th: that day you don’t have it yet. (Day 1)

2. You owe US$200, US$15 of interest is added and you pay US$40. How much do you owe now?

US$160

ON TAP That subtracts the payment but forgets the interest.

US$175 (supported answer)

ON TAP Yes: US$200 + US$15 − US$40 = US$175. You paid forty, but the debt fell by twenty-five. (Day 4)

US$215

ON TAP That’s the balance with interest, before the payment.

Not sure, show me.

ON TAP First the interest: US$200 + US$15 = US$215. Then the payment: US$215 − US$40 = US$175. (Day 4)

DAY 7 OF 7 / SCREENS 3 AND 4

SCREEN 3 OF 4

CHOOSE YOUR RULE

Which rule would you like to take with you?

- Before counting future income, confirm when it arrives. · Day 1
- Money for a payment due soon shouldn’t depend on an investment going up. · Day 2
- You can want to help and take time to check what you can manage. · Day 3
- Look separately at the balance, the charges and the payment. · Day 4
- The same amount can buy less when prices rise. · Day 5
- High gains, “no risk” and pressure: pause and check before sending money. · Day 6

Write it in your own words (optional)

My rule is...

Note: “I’d rather not choose” is always visible.

SCREEN 4 OF 4

YOU TAKE AWAY

YOU TAKE AWAY

Your rule: “[the one she chose or wrote]”.

IF YOU WANT TO TRY IT

Explain your rule to someone in your own words. Telling it is a good way to remember it.

Save my rule | Finish without saving

If she chose none

ELARA

You can finish without saving anything. The explanations stay available if you want to come back.

What would you like to learn next week?

Debt and interest | A cushion for emergencies | Starting to invest | I don’t know yet

If she taps “Debt and interest”

ELARA

That’s days 2 and 3 of week 2.

If she taps “A cushion for emergencies”

ELARA

That’s day 1 of week 2.

If she taps “Starting to invest”

ELARA

That’s days 5 and 6. First, day 1: a cushion, so money for an emergency doesn’t depend on an investment.

If she taps “I don’t know yet”

ELARA

Week 2 starts with a cushion for emergencies. You can choose later.

See my week card

Note: Don’t say she now knows how to invest, has saved or has gained confidence. No tasks or reminders.

Week 2 starts tomorrow.

Reviewer: what to check

Do the two review questions feel like a recap rather than a test? Does choosing a rule feel like hers?

What changed from V3.1

- The “How would you like to finish?” screen is replaced by two recall questions (days 1 and 4): recalling is what makes a rule stick.
- The save or finish options move to the close.
- “This rule returns to day 1” becomes “Day 1”.
- She can write the rule in her own words.
- The close no longer just ends: it asks what she wants to learn, tells her which week-2 day covers it and offers her week card.

REVIEW

Review a complete day

For each day: “Ready to test” or “Needs work”. Quote the exact sentence and propose another.

Part	Check	Day and sentence
Opening	Does yesterday’s rule in one line help recall without sounding like a test?	_____
Rule	Can she say it in her own words the next day?	_____
Teaching	Does she learn a new idea or clear up a real question?	_____
Reply	Does what Elara says after a tap help, rather than just thank her?	_____
Try it	Does “If you want to try it” feel like a useful idea rather than a task?	_____
Pace	Can she finish the day in 3-4 minutes?	_____

What María decides

- Word choices: «alquiler» or «arriendo», and «la luz» or «los servicios» (day 1), since Colombia is the beta’s largest group; «respaldo», «colchón» or «guardadito» (day 2); «estado de cuenta» (day 4).
- Currency: here “US$” always means U.S. dollars and amounts are fictional. Dollars for everyone, or each woman’s own currency?
- Whether the amounts feel realistic: rent US$180, electricity US$170, basket US$100.
- Which financial regulator to name in each country (day 6).
- Proposal: let the questions women write reach Ale, anonymously and only with their permission, for a weekly audio answer. Today they’re saved and nobody answers them.

The test

Test as text with 5-6 women before recording audio. The most telling question: the next day, before she opens the app, “Do you remember yesterday’s rule? Say it in your own words.” And at the end of the week: “Did you try any of the ideas outside the app?” No is a fine answer too.
