Codex prompt: Oceania

Daily Rhythm, seven scenes from dawn to night

Prompt for Codex: Oceania scenes (Daily Rhythm, 7 days)

Make 7 photographs, plus 2 optional spares. They join a set that already exists (Asia, North America, Europe, South America, Africa), so they must match it in size and look.

This journey is about the shape of an ordinary day. **Each image is one time of day, in order: day 1 is dawn and day 7 is night.** The light should move through the week.

Sizes (render natively, do not upscale):

- **Vertical (V):** 1620 x 3888 px (5:12). Minimum 1080 x 2592.
- **Horizontal (H):** 3888 x 1620 px (12:5). Minimum 2592 x 1080.
- Export as PNG.

Look: realistic documentary travel photo, natural light true to the time of day, rich but natural colour, gentle depth, sharp detail throughout. No people, no vehicles, no boats with people, no signs, no readable text, no logos, no watermarks. Animals only where the table says so.

Composition:

- One continuous scene, one camera position. No collage, no panels, no seams.
- **Vertical images** scroll upward on a phone. Put something worth looking at in every third: sky or distance at the top, the main landmark in the middle third, and foreground detail at the bottom (rock, plants, water, sand).
- **Horizontal images** pan left to right. Keep the main landmark between 35% and 65% of the width, with interesting detail out to both edges.
- About 15% of each long edge may be cropped. Keep it lightly detailed.

Required (7)

File	Orientation	Time of day	Place
`w10-1.png`	H	Dawn, first light	Uluru, Northern Territory, Australia, seen whole from a distance across red sand and spinifex, the way the public sunrise viewing area sees it; Kata Tjuta faint on the horizon
`w10-2.png`	V	Early morning	Sydney Harbour, Australia: the Opera House and Harbour Bridge across calm water, sandstone rocks and a fig tree in the foreground
`w10-3.png`	V	Late morning, high sun	The Great Barrier Reef from above, Queensland: turquoise shallows, coral patches and deep blue channels, a small sand cay in the middle third
`w10-4.png`	H	Midday, mist in the valley	The Three Sisters, Blue Mountains, New South Wales: sandstone pillars above a valley of eucalyptus forest with blue haze

File	Orientation	Time of day	Place
`w10-5.png`	H	Golden hour	Flinders Ranges, South Australia: a creek flat with a big river red gum, a small group of red kangaroos grazing quietly in the middle distance, the ranges glowing behind. **The only image with animals.** Keep them small and natural, not posed
`w10-6.png`	V	Dusk, after sunset	Milford Sound, New Zealand: Mitre Peak rising from still water, a thin waterfall on the cliff, soft violet sky
`w10-7.png`	V	Night	Bay of Fires, Tasmania: orange-lichen granite boulders on a quiet beach under a clear starry sky, the Milky Way above, faint moonlight on the water

Optional spares (2)

File	Orientation	Place
`sp-oc-1.png`	H	The Twelve Apostles, Great Ocean Road, Victoria, at sunrise
`sp-oc-2.png`	V	Whitehaven Beach and Hill Inlet, Whitsundays, from above, white sand swirling through turquoise water

Please respect these places

- **Uluru and the Flinders Ranges are Aboriginal Country** (Anangu and Adnyamathanha). Show Uluru only as the whole rock from far away. No close-ups of its surface, caves or rock art. No rock art anywhere in the set.
- Do not invent buildings, piers or tourist structures that aren't there.

Check before sending

Check every image yourself. Regenerate once if you see:

- a seam
- a person
- readable text
- a distorted landmark (wrong number of Three Sisters, a misshapen Opera House or bridge)
- light that doesn't match its time of day
- anything that looks fake

If it still fails, keep the best version and mark it "needs review".

Order

First make **only** `w10-1` **and** `w10-7` (dawn and night, the two ends of the day). Show them to me and wait for my OK. Then make the rest in order, 2 to 6, then the spares.

Delivery: one zip with the file names above, sent as an attachment or put in the same Google Drive folder as last time. Please don't paste images inline in the chat. Tell me the exact pixel size of each file and which ones need review.
