ELARA MOBILE · CURRENT-STATE PREVIEW

Circles — current experience

How the Circles feature works in the build as it is today: what a member can do, what happens next, and where it is rough. Documentation only. Nothing in the app was redesigned or changed.

Date	12 October 2026 (inspected today). File name keeps the requested 2026-10-11.
Branch / commit	`claude/direction-variants` @ `b08d7d3` “Beta paper motion: one folded-corner page turn…” (2026-10-12 04:23 UTC). No uncommitted changes in any Circles file; a concurrent agent had uncommitted edits to Path/practice files only.
How it ran	Expo web build (Metro dev server, `apps/mobile`) against the local Cloudflare Worker (`wrangler dev --local`, local D1 SQLite). Never a production API.
Viewport / device	Headless Chromium 141 (Playwright), mobile viewport **390 × 844 CSS px at 2×** (iPhone 12–15 class). Every screenshot uses this one viewport. Not a physical phone; no iOS or Android build was run.
Language inspected	**Spanish (es-ES)** — the app’s current UI language for this account. This document is written in English; app copy is quoted in Spanish with a gloss where it matters.
Account / data	Local demo account “Maya” (`preview@example.com`, Premium) with the seeded demo rooms (Mothers Circle, Family Money Talks, Soft Boundaries, Founders, Founder Money Reset). Seed content is partly English.

Seen in running app observed on screen in this build, at this viewport.

Confirmed in code read in the current source; not exercised on screen.

Not verified could not be observed or confirmed; no claim is made that it works.

1 numbered markers beside a screenshot point to a rough edge (R1–R9, summary page). Markers sit outside the interface; screenshots are not retouched or cropped.

BEFORE THE SCREENS

What was inspected, and how

Sources of truth

- **Running app.** Every screen in this document is a screenshot of the current web build, driven by a script (tap, scroll, type). Nothing was mocked up, recreated or generated.
- **Current source.** Routes `app/(tabs)/circle.tsx`, `circle-detail`, `circle-composer`, `circle-preview`, `circles`, `circles-mine`, `circle-shelf`, `circle-table`, `circle-catchup`, `table-composer`, `post/[id]`; components in `src/components/circles`, `PostActions`, `ReportSheet`, `RoomMenuSheet`; copy in `locales/es/rooms.ts`.
- **Project instructions.** `docs/CIRCLE.md` (decisions of record). There is no AGENTS.md or CLAUDE.md in the repo. Where the doc and the build differ, the build is reported.
- **Tests.** API: `vitest run test/circle*` → 9 files, 174 tests passed. Mobile: `src/lib/circleRooms*.test.ts` → 2 files, 39 passed. Passing tests are not counted as on-screen evidence.

Simulated network conditions

Loading, error and empty states were reached by changing what the browser received, never the app: a delayed response (loading), an HTTP 500 (error), and one stubbed empty hall response (no circles). Those screenshots are marked *simulated network*.

What the inspection wrote (local dev database only)

- Two test answers to the open question in *Mothers Circle*, both starting "(Prueba local de vista previa)". Both were then removed with the app's own *Eliminar publicación* (status `hidden`); the rows remain hidden in local D1.
- Joined *Money After Divorce* through the doorway, then left it from the room menu. Membership is back to the original five; the one-time seat-intro flag for that room stays recorded (by design, so the seat moment does not replay).
- Toggled *Esto se quedó conmigo* on one answer, then off again.
- Read cursors moved as the app normally moves them (`/circles/hall/seen`, `/circles/:id/seen`).
- Not done: no report was sent, nobody was blocked or hidden, no reply, table or DM was posted, no preference was changed.

Housekeeping during the run

The local API process stopped mid-run (not caused by an app action); it was restarted with the same command and the affected screens were captured again. A red dev-build overlay (`#error-toast`, a React "<button> cannot contain a nested <button>" warning from `PressableScale`) appears in this dev web build; it was hidden for screenshots. It is a development warning, not product UI.

OVERVIEW

Flow map of the verified paths

Everything below was reached by tapping in the running build, except the push/deep-link entry (code only) and the keyboard-open state (not observable in a web preview).

ENTRY

Tab bar · Círculos
5th tab, Premium only

Push / deep link with circleId
forwards into that room (code)

Not Premium (or subscription loading)
“Tu Círculo es parte de Premium” upsell

HOME · “CÍRCULOS”

Hall (app/(tabs)/circle.tsx)
Room tabs (pinned, max 3) + “Todos” chevron · Today’s question for the selected room · “Añade tu frase”
Two newest answers as slips · “Leer las N respuestas” · “Entrar a …” · Caminan contigo (same path week)
Desde … (since-you-were-here, max 3) · Círculos con un lugar libre (max 2) · Explorar círculos
Overnight safety note · “Pedir ayuda ahora” · “Estás al día” end mark

No feed, no counts of likes. Choosing a tab changes the question shown; it does not enter the room.

INSIDE A ROOM

Room (circle-detail)
door · seats · on the table
their answers · Mesas · shelf

Answer composer
one field, voice, draft saved
Send in the header

Answer + replies (post/[id])
“Esto se quedó conmigo”
flat replies, public to room

Switcher / pins / Tus círculos
swap room in place
edit up to 3 pinned

Room menu (···)
notify · recaps · return note
guidelines · Leave → confirm

Own answer ···
offer a doorway line
Eliminar → confirm → hidden

Others’ answer ···
Reportar (7 reasons) · Ocultar
Bloquear · member sheet

Shelf · past question
Elara recap (themes only)
Catch-up page · Mesas

Shield / “Pedir ayuda ahora” → /help explainer list (R2)

Guidelines (“Cómo funciona este círculo”) · notification settings

JOINING · LEAVING

Explorar círculos
area tabs · “only open seats”

Doorway (circle-preview)
seats · question · 2 lines

“Tomar un lugar”
→ room, “Tomaste el octavo lugar”

Leave (room menu)
confirm “Salir” → back to hall

STATES

Loading
skeleton cards

Error
message + “Reintentar”

Empty (no circles)
“Encuentra un círculo…”

Keyboard open
not observable on web

Solid boxes: seen in the running app. Dashed: the push entry is confirmed in code only; keyboard-open is not verified.
Arrows show the tap that leads there. Switching rooms sets the route’s id (no push), so Back returns to the hall.

FLOW 1

Entry and the hall (Circles home)

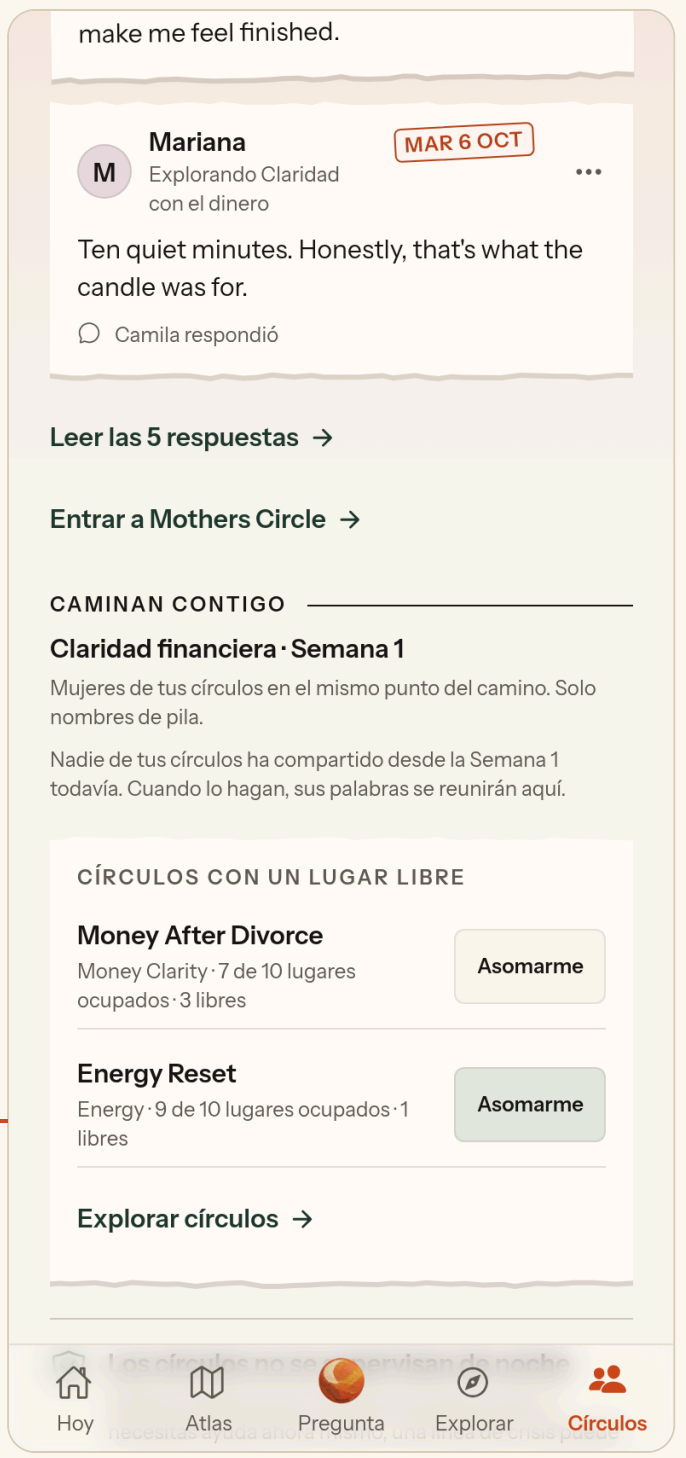

Seen in running app · Confirmed in code · push deep link

The Circles tab (fifth tab, “Círculos”) opens a finite “hall”, not a feed. It puts one question on the table for the selected room and gives one primary way to answer it.

CAN DO	Read today’s question for a room; tap *Añade tu frase* to answer; open one of the two newest answers; *Leer las 5 respuestas* or *Entrar a Mothers Circle* to go in; look into rooms with a free seat (*Asomarme*) or *Explorar círculos*.
NEXT	Answer and room links open the composer or the room. The hall marks itself seen after 2 s on screen, which resets the “since” lines. A push carrying a `circleId` forwards straight into that room (code only).
LIMITS	Only joined rooms appear as tabs. *Caminan contigo* was empty for this account (“Nadie de tus círculos ha compartido desde la Semana 1 todavía”). *Desde …* lines show only when something new happened; none did here.

h01 First screen. Room tabs, the question, seat faces, *Añade tu frase* (primary), then answer slips.

h02 Lower: *Caminan contigo*, two rooms with a seat open. “1 libres” (plural used for one).

h03 End: overnight safety note, *Pedir ayuda ahora*, “Estás al día”.

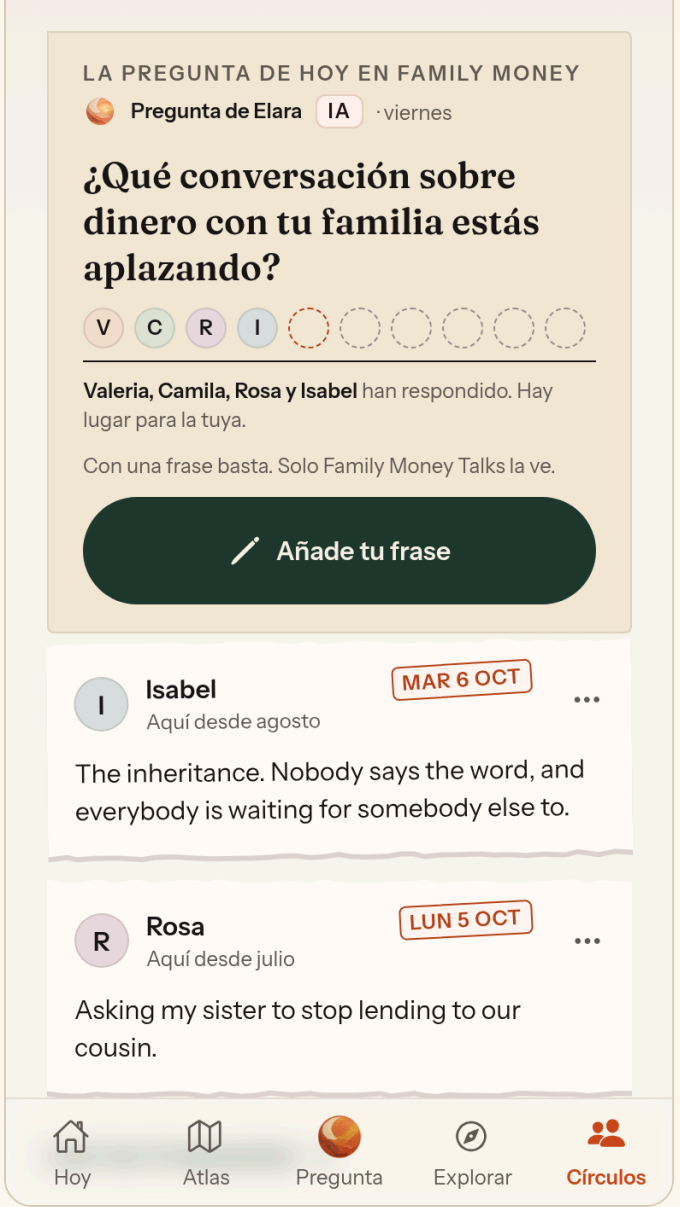

FLOW 2

Switching rooms and pins

Seen in running app

A member who sits in several rooms moves between them with the index tabs, a switcher sheet (the chevron, *Todos los círculos*) or the pin editor.

CAN DO	Tap a tab; open the switcher for *Tus círculos* split into *Fijados* and *También tuyos*; *Editar fijados* to pin up to three and reorder; *Explorar círculos*.
NEXT	On the hall a tab swaps the question and slips in place (it does not enter the room). Inside a room, tabs swap the room in place, so Back returns to the hall.
LIMITS	Pin editing was opened but not saved. With a fourth tab the labels truncate (Flow 7, R6). Leaving is not offered here, by design. The full list *Tus círculos* is in Flow 9.

t01-family Tapping *Family Money* swaps the question and slips (dot = new since last visit).

t02-switcher Switcher sheet with each room's last line ("Rosa te respondió").

t03-pins *Círculos fijados*: three pinned; "Hay tres fijados. Quita uno para fijar Founders."

FLOW 3

Inside a room

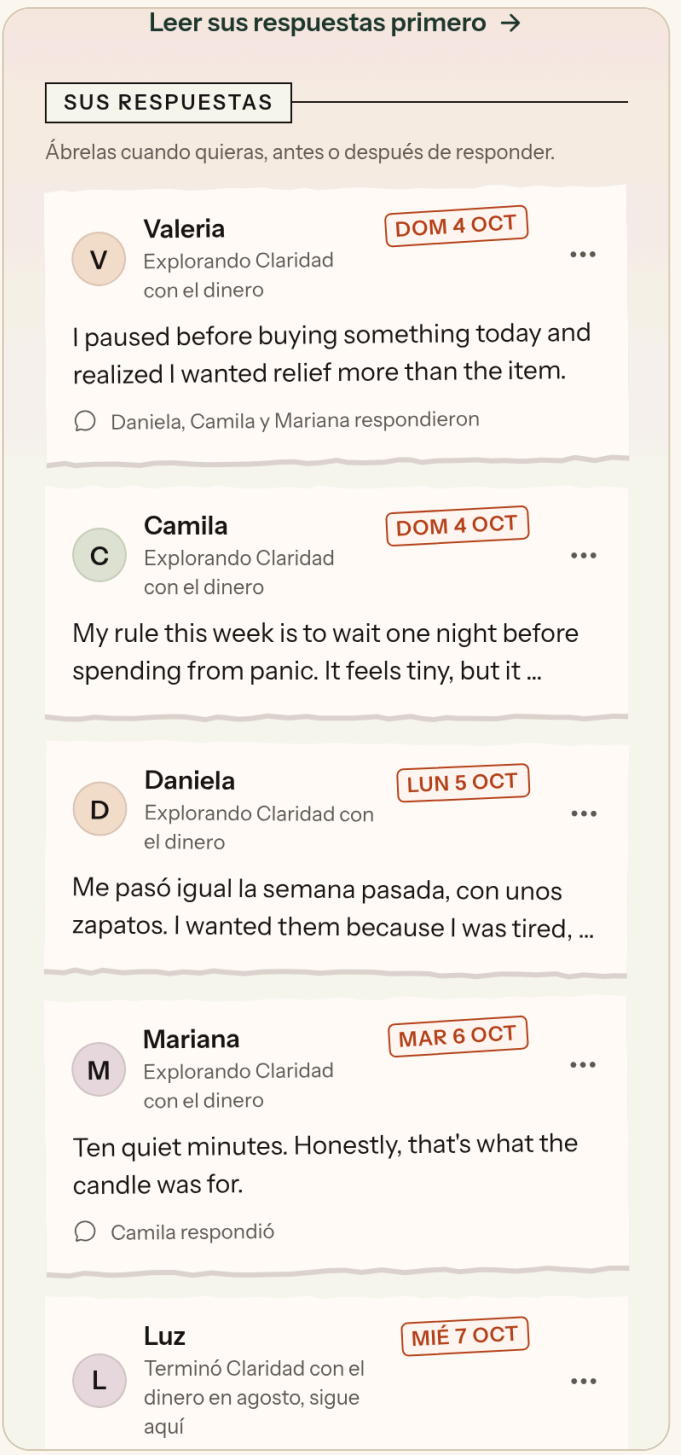

Seen in running app · Confirmed in code · realtime refresh

A room reads top to bottom: door, who is here, the question on the table, the others' answers, member-made tables, the shelf of past questions, the safety note and an end mark.

CAN DO	Write an answer; jump to *Sus respuestas*; open an answer; tap a name for her profile; ⋯ on any answer; *Abrir una mesa*; *Abrir el estante*; room menu (⋯ in the header); shield → help.
NEXT	Reaching the end marks the room seen. The room listens on a socket for new answers and replies (code; not observed live).
LIMITS	Two full-width primary buttons (*Escribe tu respuesta*, *Abrir una mesa*) sit in one room. Demo answers are mostly English inside the Spanish UI (seed data); the door label reads "MONEY CLARITY".

r01 Room top: same tabs with this room raised; door, faces, names, the question, *Escribe tu respuesta* above the fold.

r02 *Sus respuestas*: each answer as a paper slip with a reply line ("Daniela, Camila y Mariana respondieron").

r03 *Mesas*, *El estante* (with Elara's recap), safety note, "Eso es todo el círculo."

FLOW 3 · CONTINUED

The room menu

The header ··· holds what she can change about being in this room. Leave is a separate row behind a confirm.

m01-menu Per-room notifications, include my answers in Elara's recaps, announce my return, guidelines, *Salir de Mothers Circle*.

m02-leave-confirm Leave confirm: what she stops seeing; footnote that shared answers stay. Cancelled here.

x07-guidelines *Cómo funciona este círculo* (from the menu or the composer): what we ask, then what to expect.

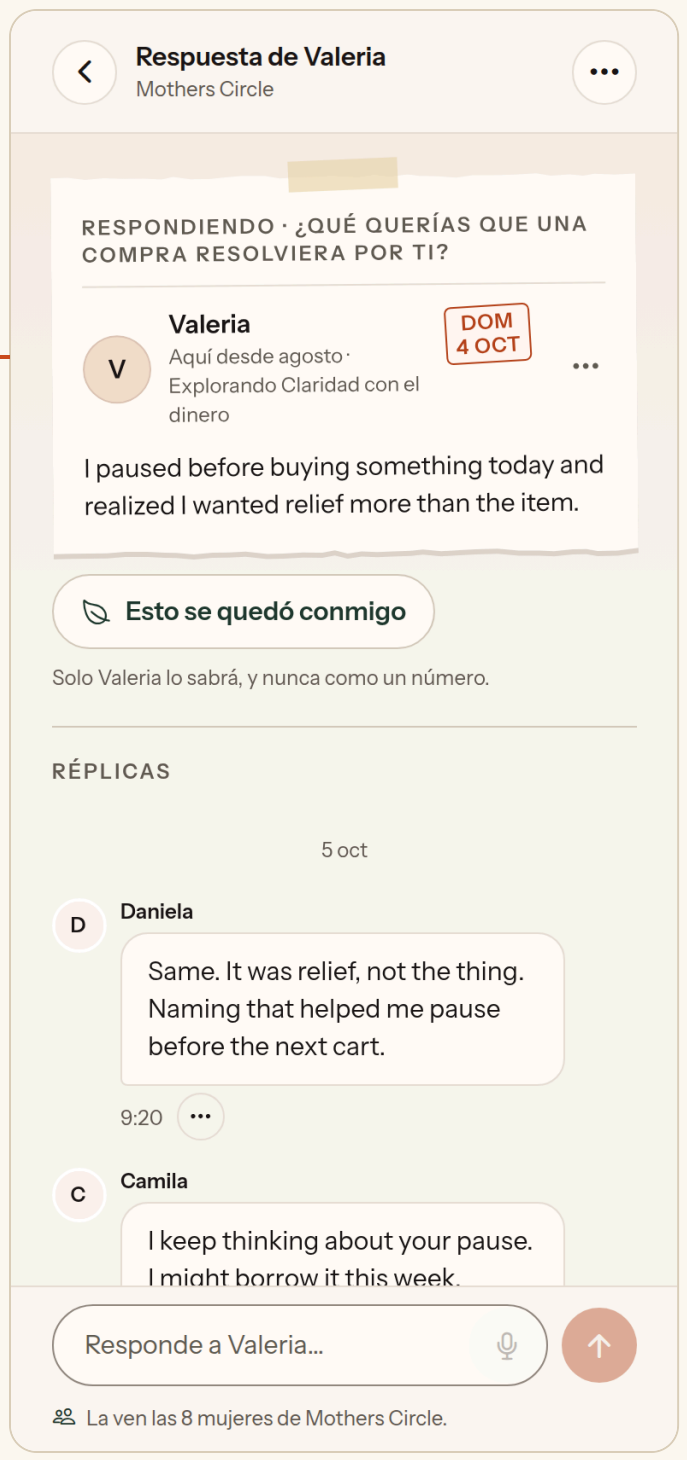

FLOW 4

An answer, its replies and the one reaction

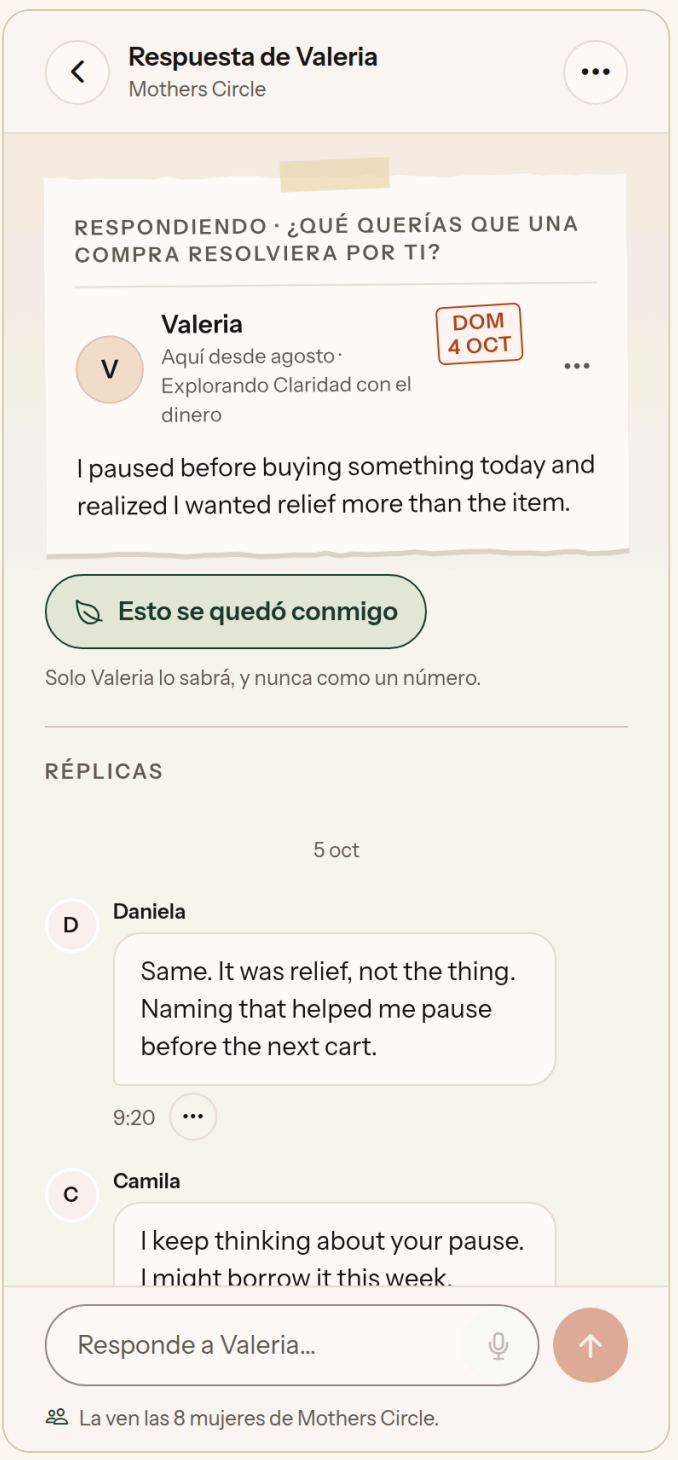

Seen in running app · Not verified · sending a reply

Opening an answer shows it pinned at the top as paper, the single private appreciation, and a flat list of replies with a reply field.

CAN DO	*Esto se quedó conmigo* (toggle; “Solo Valeria lo sabrá, y nunca como un número”); read replies; ⋯ on a reply; type a reply (*Responde a Valeria…*); the line under the field says who reads it: “La ven las 8 mujeres de Mothers Circle.” Tapping her name opens her member sheet.
NEXT	The reaction was toggled on and off again. The reply send arrow turns terracotta once there is text (a06, re-check page); no reply was sent.
LIMITS	No like or reaction counts. Replies are one level deep. The “kindness first” line (*Estás respondiendo a la semana real de alguien…*) shows only while a keyboard is up, which a web preview never reports (not verified).

a01 Answer detail. “Aquí desde agosto” for Valeria.

a04-stayed-on *Esto se quedó conmigo* on (filled). Turned off again afterwards.

p03-member Her member sheet: “Aquí desde septiembre”, then “Valeria en agosto”. Messaging is off.

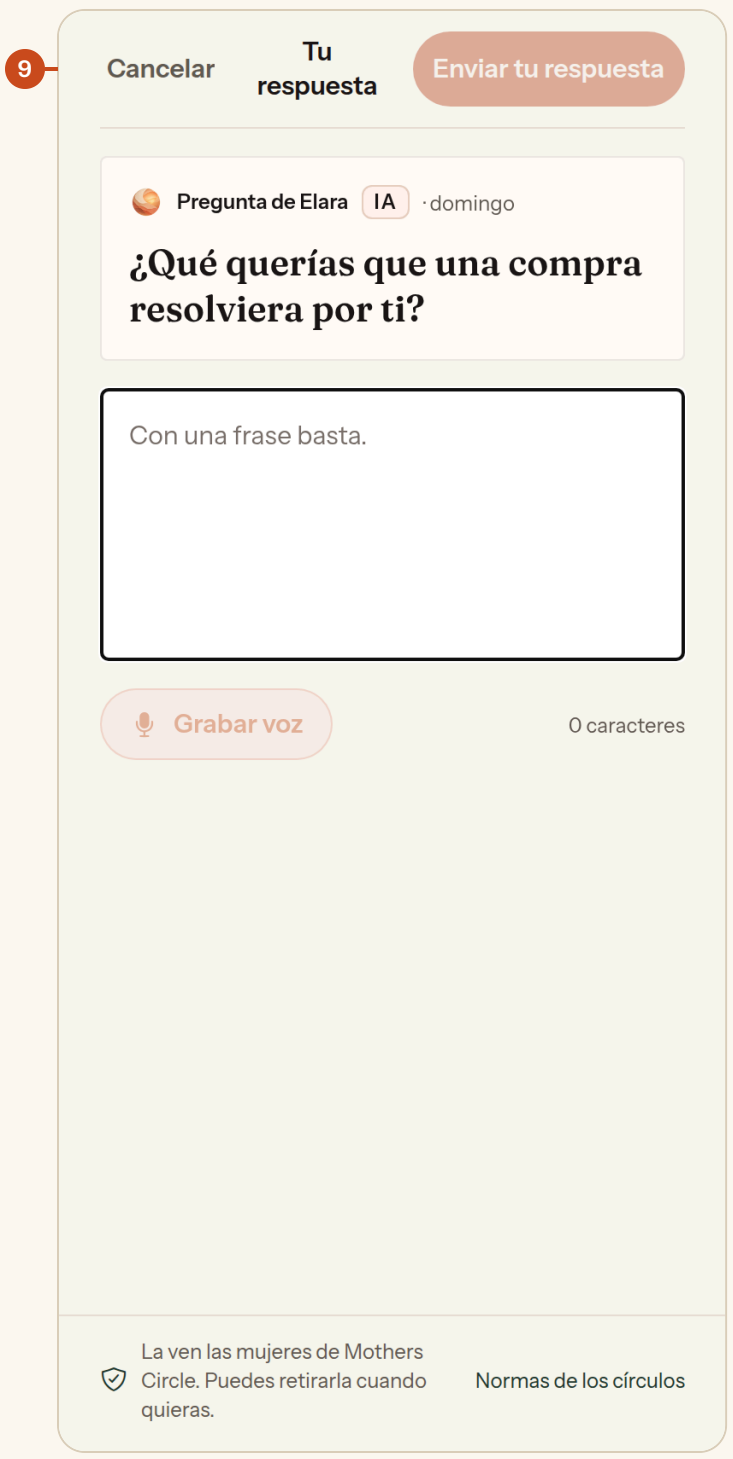

FLOW 5

Sharing an answer: audience and posting

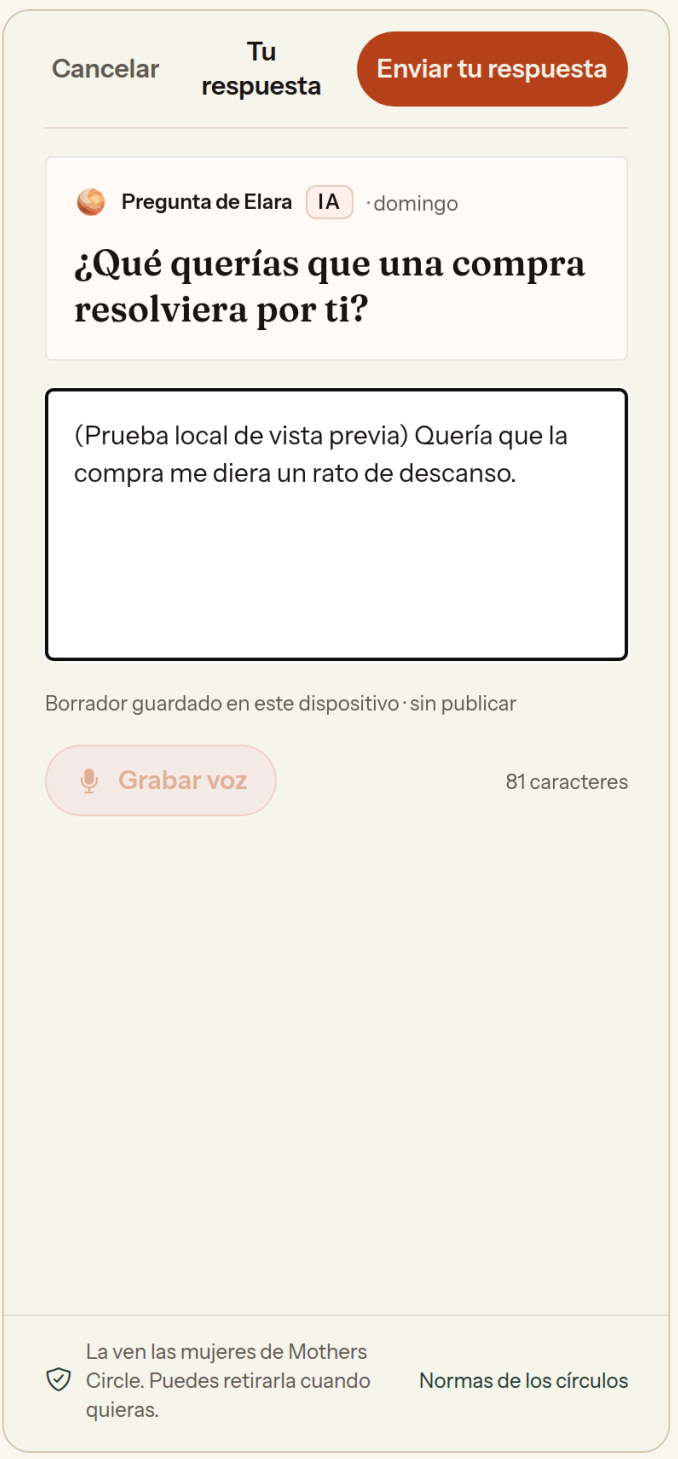

Seen in running app · Confirmed in code · visibility fixed to the circle

The answer composer always writes to the open question of one room. There is no audience choice: the room is the audience, and the screen says so twice.

CAN DO	Type (or *Grabar voz*); the draft is saved on the device (“Borrador guardado en este dispositivo · sin publicar”); *Enviar tu respuesta* in the header; *Normas de los círculos*.
AUDIENCE	Hall: “Con una frase basta. Solo Mothers Circle la ve.” Composer footer: “La ven las mujeres de Mothers Circle. Puedes retirarla cuando quieras.” The code sends `visibility: "circle"`; no private or wider option exists.
NEXT	Send returns to the room, scrolled to the top, with no confirmation message (c03). The result is shown in Flow 6.

c01-composer Composer: the question on paper above the field; Send disabled until text. Title wraps to two lines.

c02-typed Test answer typed (local DB only); Send active; draft saved.

c03-after-send Straight after Send: back in the room, top of page; no toast. Her face joins the seat row.

FLOW 6

The result after posting, and taking it back

Seen in running app · Confirmed in code · cache not refreshed

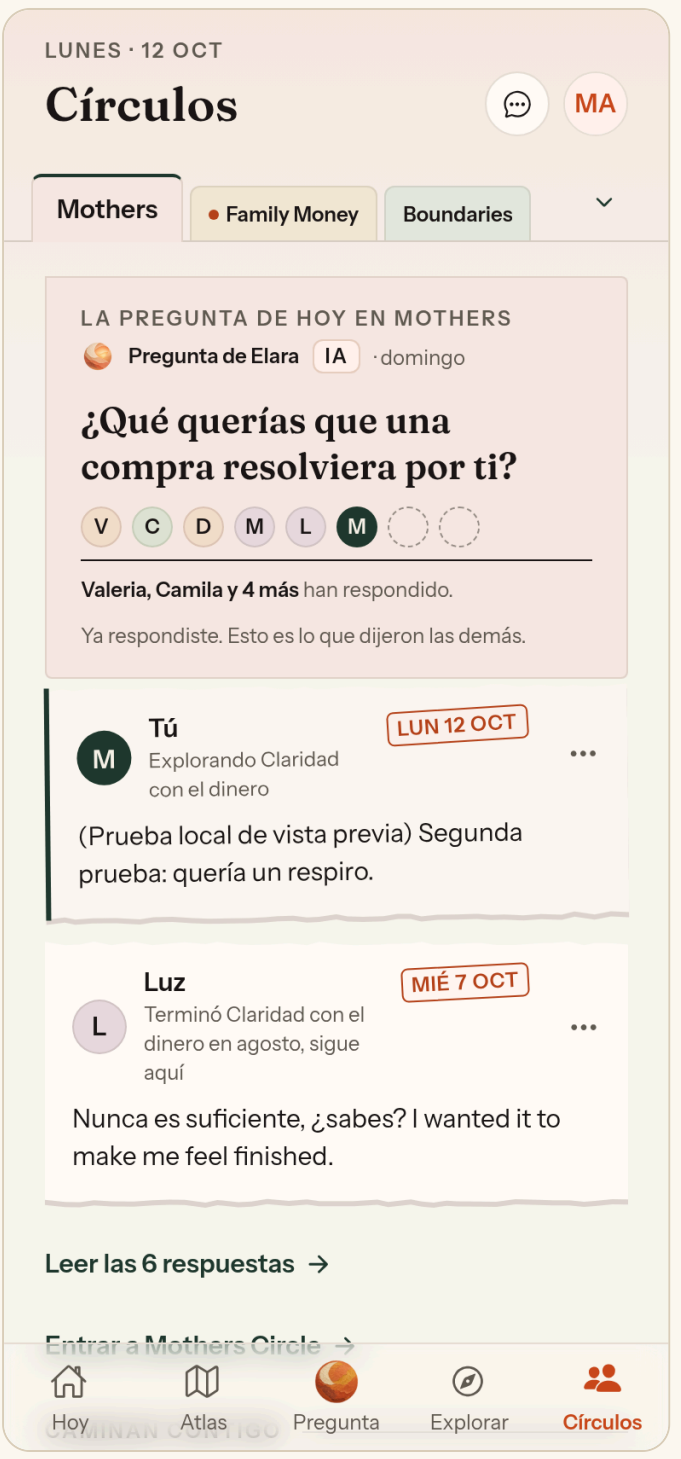

Her answer appears as “Tú” in the room and as the first slip on the hall. Her own ⋯ menu offers a doorway line and *Eliminar publicación*.

RESULT	Room: last in *Sus respuestas*, below the fold (R7); the write buttons disappear. Hall: “Ya respondiste. Esto es lo que dijeron las demás.”
TAKE BACK	*Mostrar una línea en la puerta* (offer a line for the doorway; a person reviews it; not exercised). *Eliminar publicación* → confirm → toast “Publicación eliminada”; the local API then reports the answer unavailable.
ROUGH EDGE	**R1.** The removed answer stayed listed in the room 15 s later and went only after reopening the room. In code, removal drops it from the old feed caches and invalidates `["reflections"]`, but room answers live under `["circles","answers",…]`. Whether a live socket event refreshes it on a connected phone was not verified.

7

c05-own-answer Scrolled down: her answer is last in the list, marked “Tú”.

d02-hall-answered Second test answer: hall reads “Ya respondiste…” with her slip first.

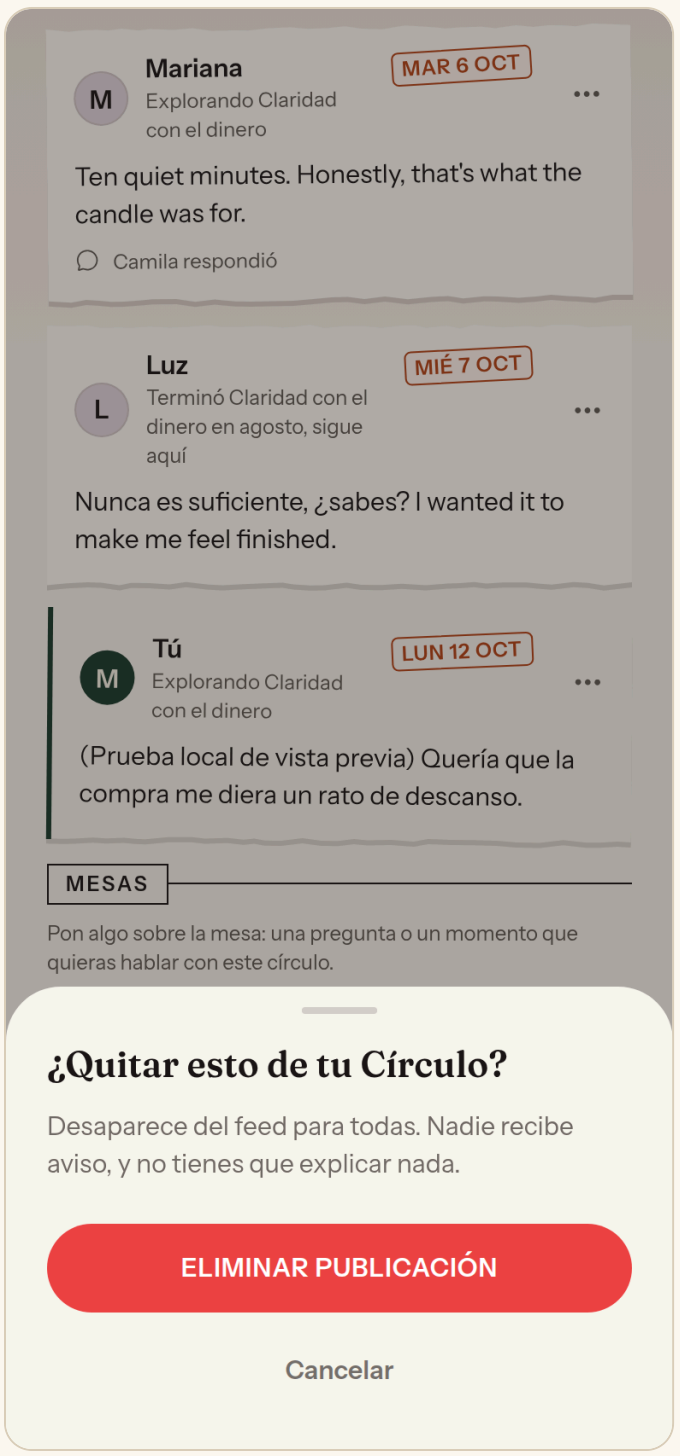

c06-own-menu Own answer menu: doorway offer and *Eliminar publicación*.

FLOW 6 · CONTINUED

Removing an answer

Sequence on the second test answer. Screenshot d04, taken 15 s after removal, matches d03 without the toast.

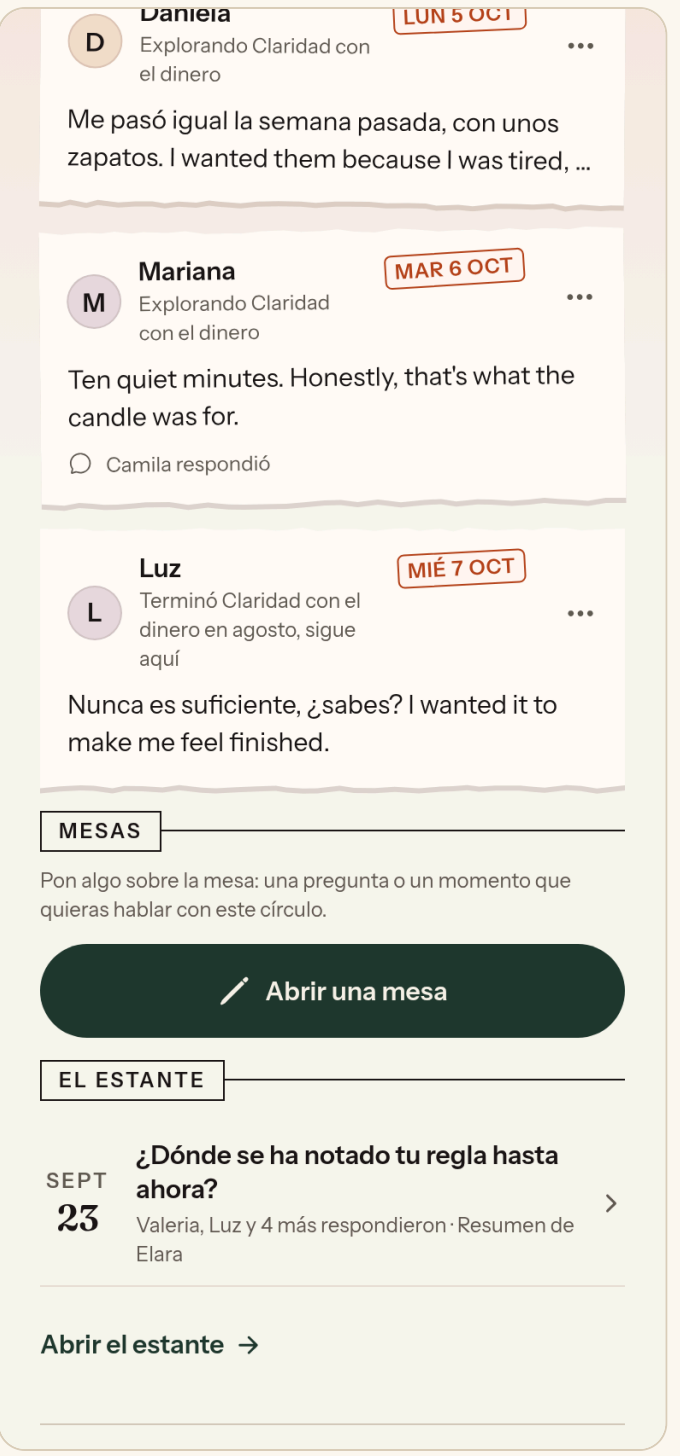

c07-retract-confirm Confirm: “¿Quitar esto de tu Círculo?” (body still says “Desaparece del feed…”).

1

d03-toast Just confirmed: toast says removed while the answer is still listed.

d05-after-reload After reopening the room: gone; count back to five, write buttons return.

FLOW 7

Discovering, joining and leaving a circle

Seen in running app · Confirmed in code · full rooms

Browse lists rooms by area with seats shown as faces and empty rings. A doorway shows a room from outside before taking a seat.

CAN DO	Filter by area; *Solo círculos con un lugar libre* (on by default); *Asomarme por la puerta*; on the doorway, *Tomar un lugar* under a consent line (name and portrait will be visible, leave any time). Leave from the room menu.
NEXT	Join → straight into the room with her face added and “Tomaste el octavo lugar. Es tuyo.” Leave → confirm *Salir* → back on the hall, room gone from the tabs, no toast.
LIMITS	A full room offers no seat (code; no full room in the demo data). Area tabs and door labels are English (“Energy”, “Life areas”, “MONEY CLARITY”); two rooms are both called “Energy Reset”. The seat animation was not timed frame by frame.

b01-browse Browse: area tabs, the open-seat switch, cards with seats.

b03-doorway Doorway: seats with her as the eighth, question, two shared lines, *Tomar un lugar*.

b05-seated After joining: “Tomaste el octavo lugar. Es tuyo.” With five rooms the tabs truncate.

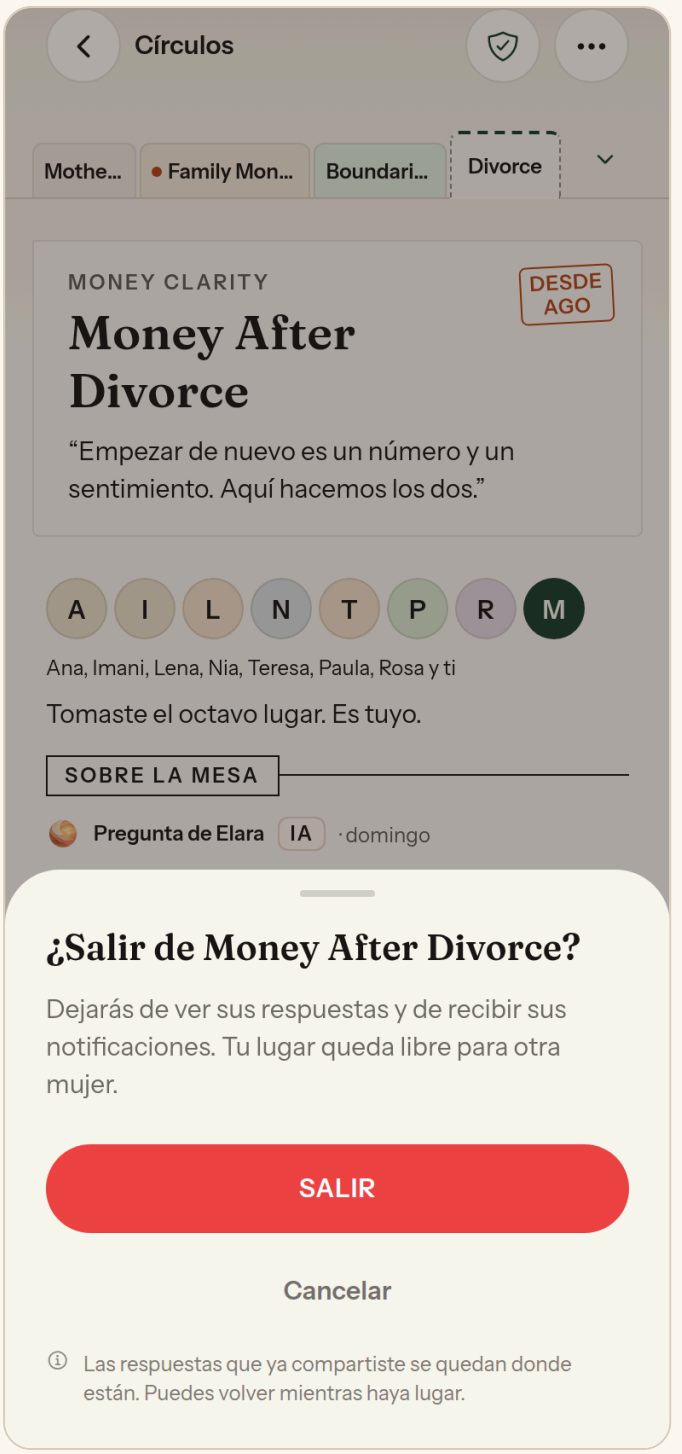

FLOW 7 · CONTINUED

Browse detail and leaving

The test join was undone straight away from the room menu.

b02-browse Further down Browse: "9 de 10 lugares ocupados · 1 libres"; joined rooms say *Ya estás en este círculo*.

b06-leave-confirm Leaving the test room: *¿Salir de Money After Divorce?*

b07-after-leave After *Salir*: back on the hall with the original three pinned tabs.

FLOW 8

Safety and moderation controls

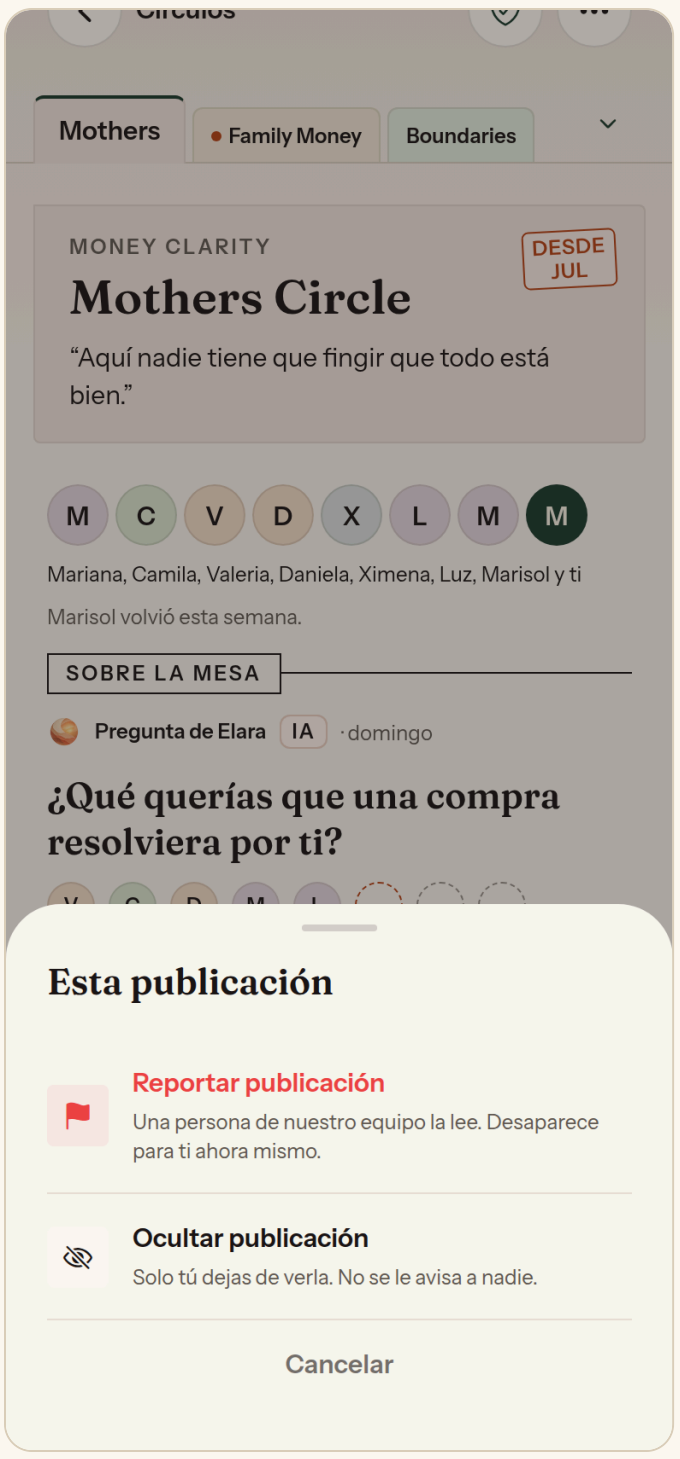

Seen in running app · Confirmed in code · crisis lines after a self-harm report · Not verified · sending a report

Every answer by someone else has Report and Hide; Report carries Block. A self-harm report is handled differently. A safety note sits on the hall, every room and the room menu.

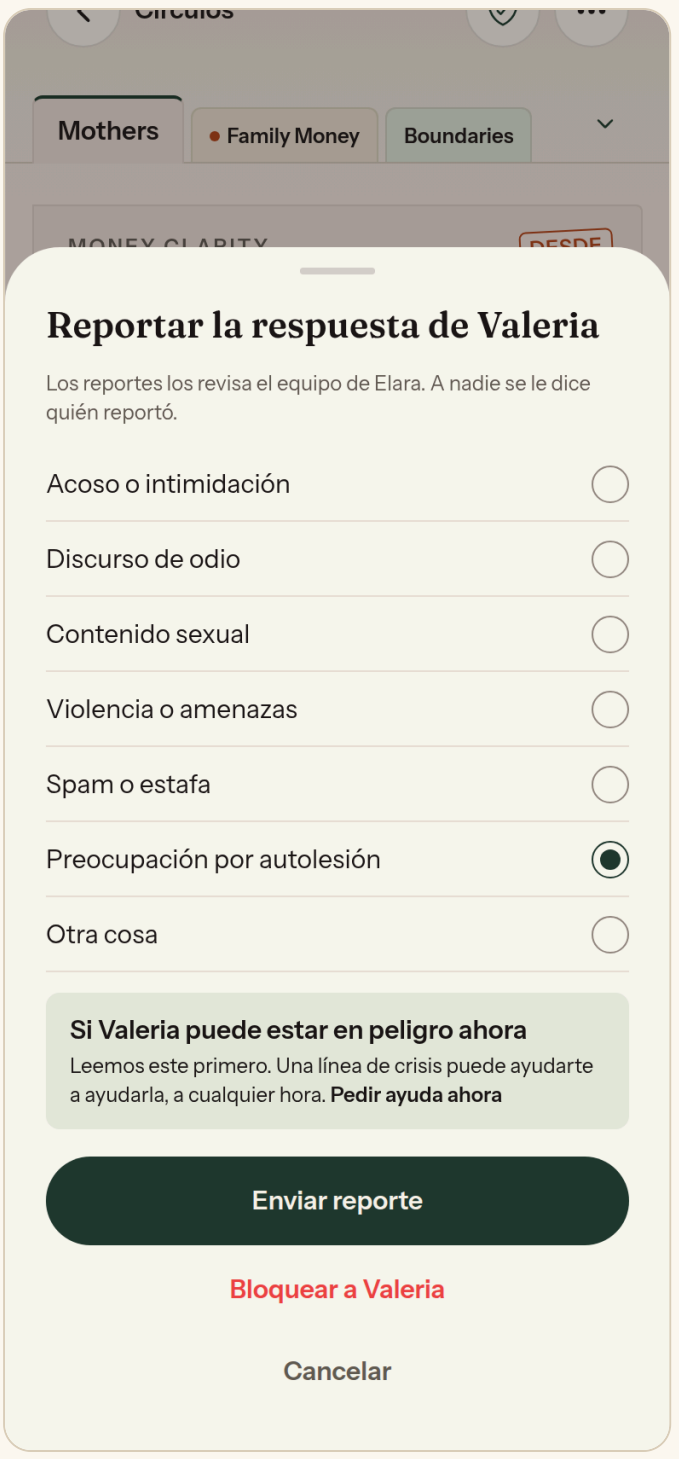

CAN DO — *Reportar publicación* (seven reasons; *Otra cosa* asks for words), *Ocultar publicación* (only for her, nobody is told), *Bloquear a Valeria*. Choosing *Preocupación por autolesión* adds “Si Valeria puede estar en peligro ahora…”.

NEXT — Code: a self-harm report is sent at high priority and the reporter is shown crisis resources (`CrisisResources`) after sending. Not sent here.

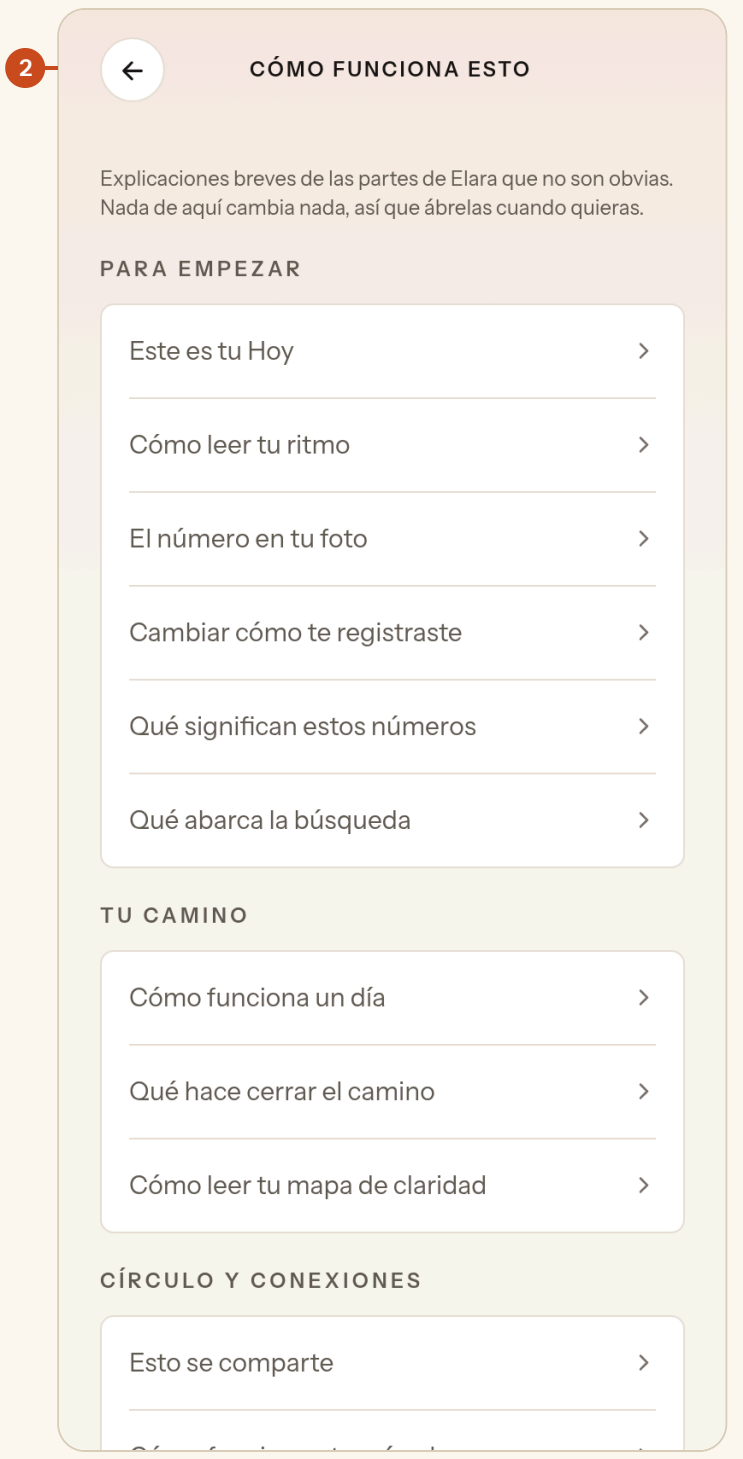

ROUGH EDGE — **R2.** Every *Pedir ayuda ahora* (hall, room, menu, report sheet) and the header shield open `/help` , the general “Cómo funciona esto” explainer list. It holds no crisis line; the only crisis-line screen comes after sending a self-harm report.

p01-actions ··· on another member’s answer: report or hide.

p04-report-selfharm Report sheet with *Preocupación por autolesión* chosen; the danger note. Not sent.

x09-help Where *Pedir ayuda ahora* leads: the explainer index, no crisis numbers.

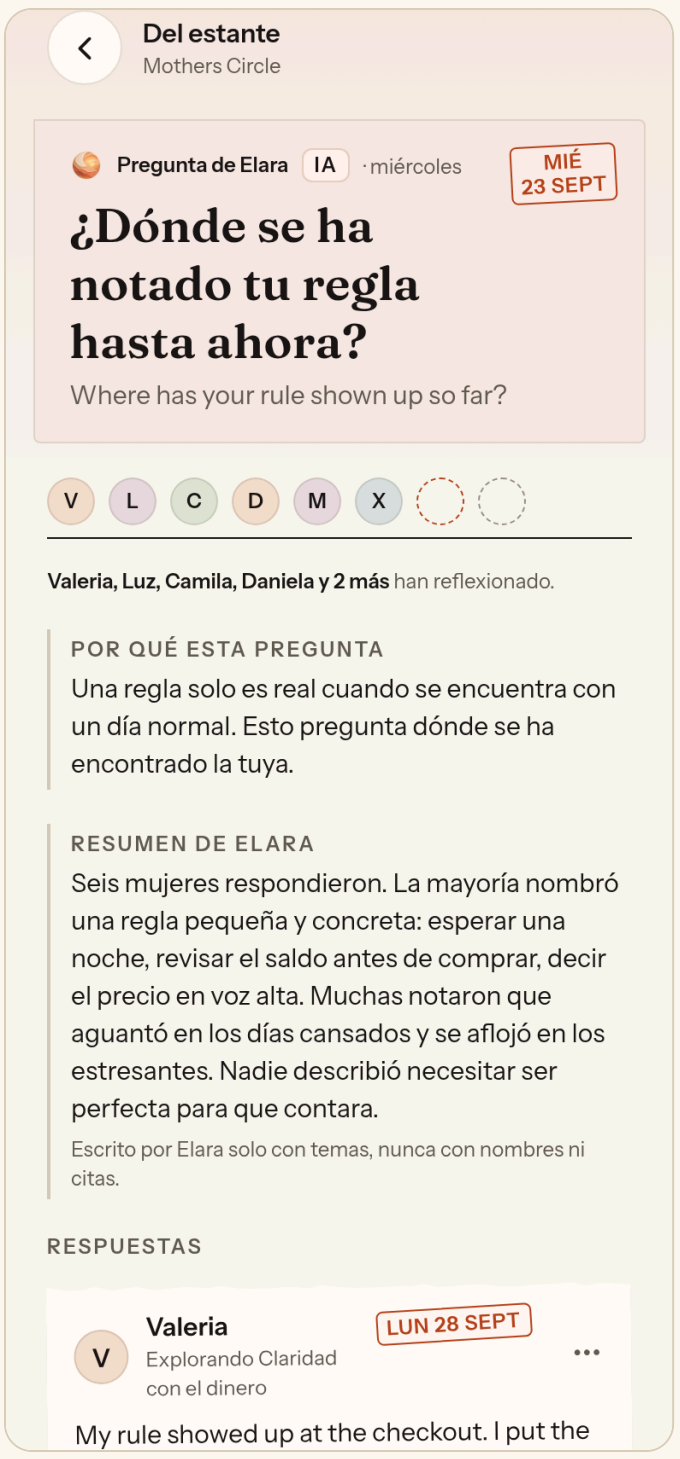

FLOW 9

Past questions, catch-up and member tables

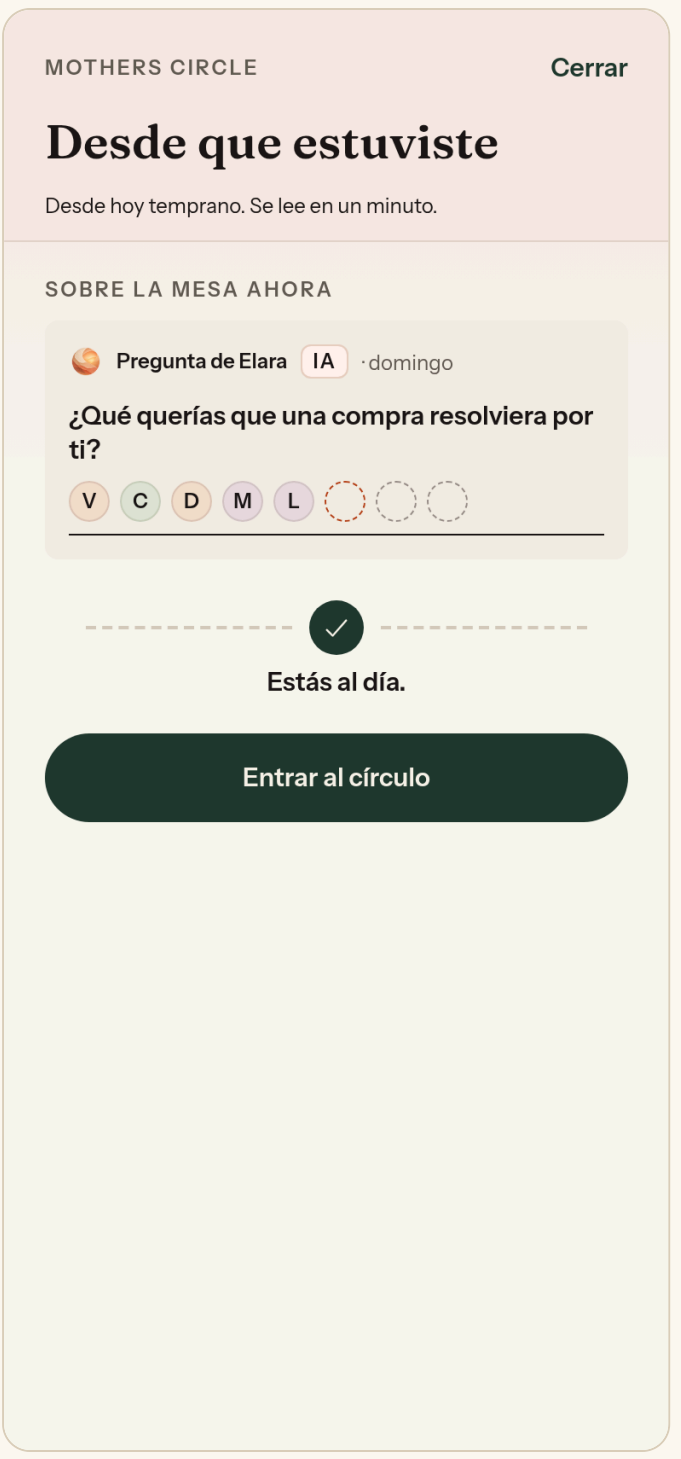

Seen in running app · Not verified · catch-up auto-open, posting a table

Closed questions move to the room's shelf with Elara's themes-only recap. Members can also put their own topic on the table.

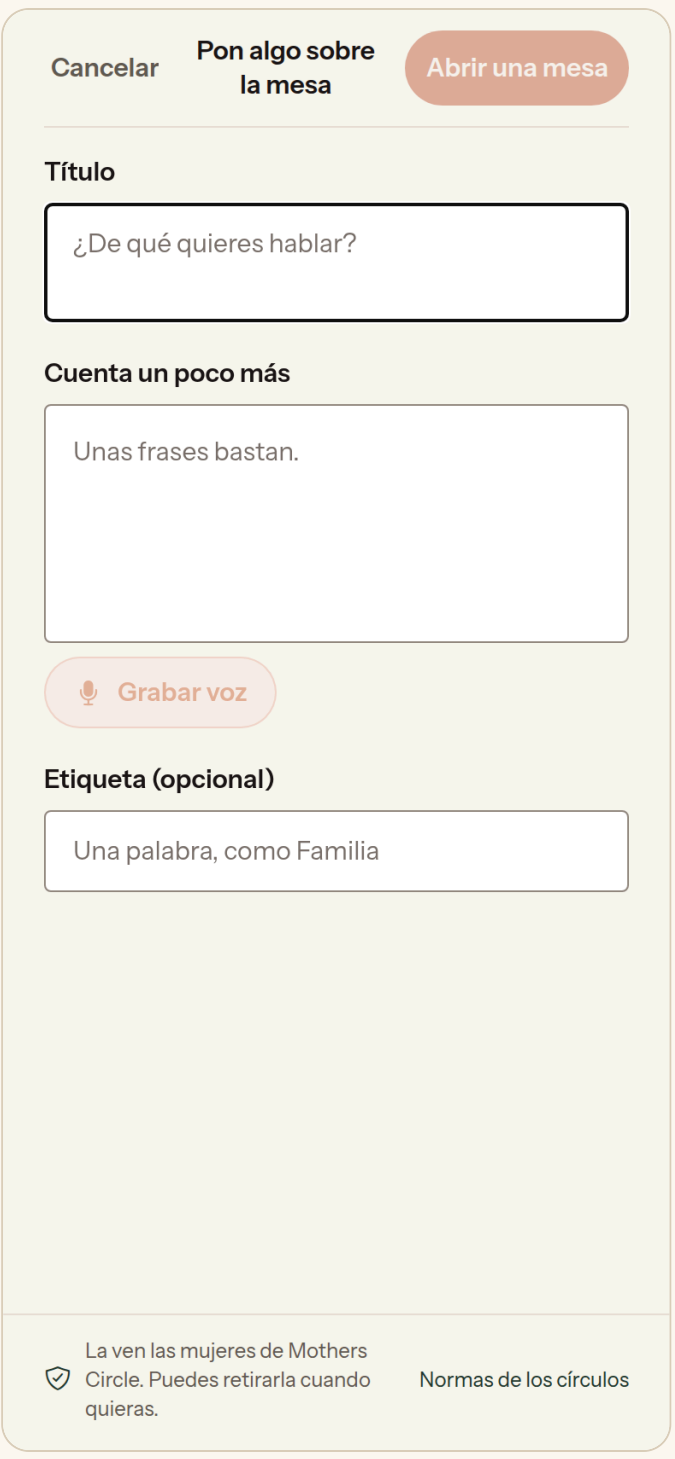

CAN DO	Open the shelf and a past question (why it was asked, Elara's recap, all answers); read the catch-up page (*Desde que estuviste*); start a table (title, a little more, optional tag).
NEXT	Catch-up opens by itself only after 4+ days away with something new (code); here it was opened by its route. No table was posted.
LIMITS	The past question shows its English translation under the Spanish ("Where has your rule shown up so far?").

x03-shelf-table Past question: "Por qué esta pregunta", "Resumen de Elara", then the answers.

x05-catchup Catch-up page for Mothers Circle: nothing new, "Estás al día".

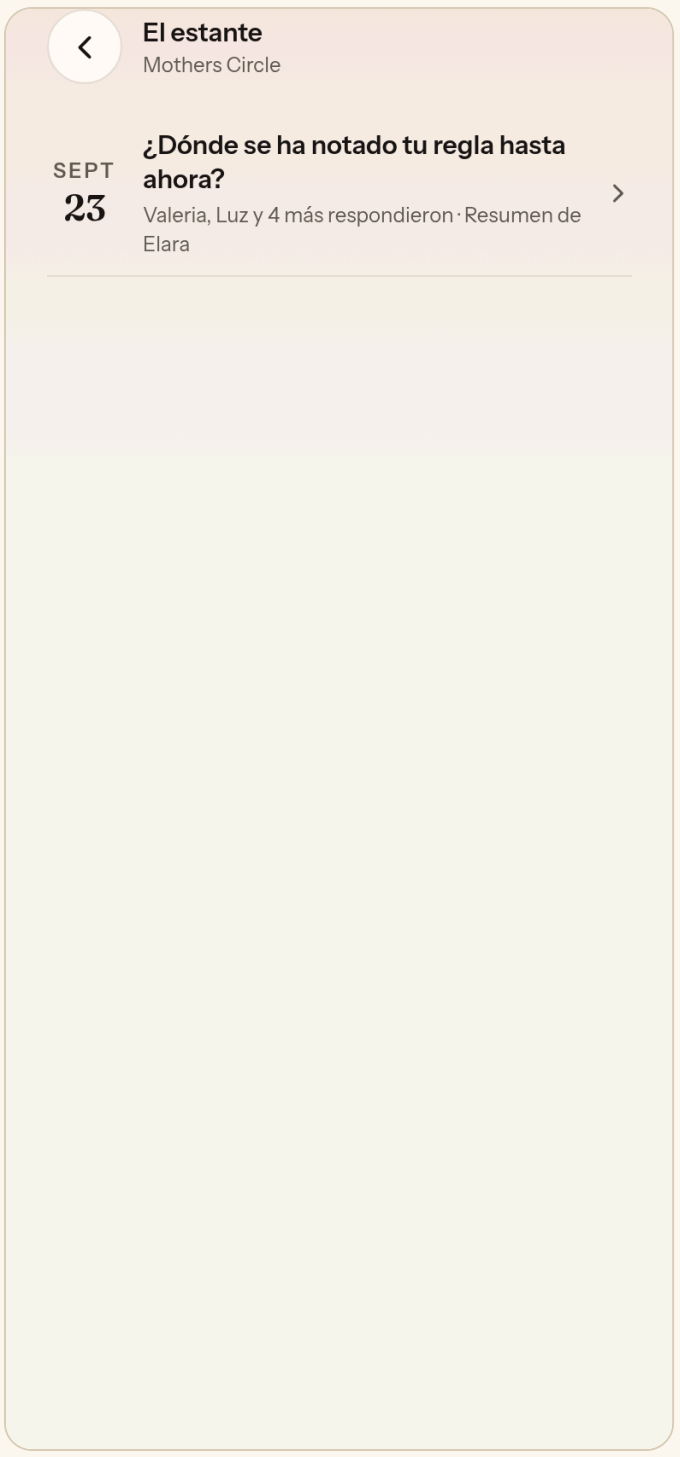

x06-table-composer *Pon algo sobre la mesa* (table composer), empty, not posted.

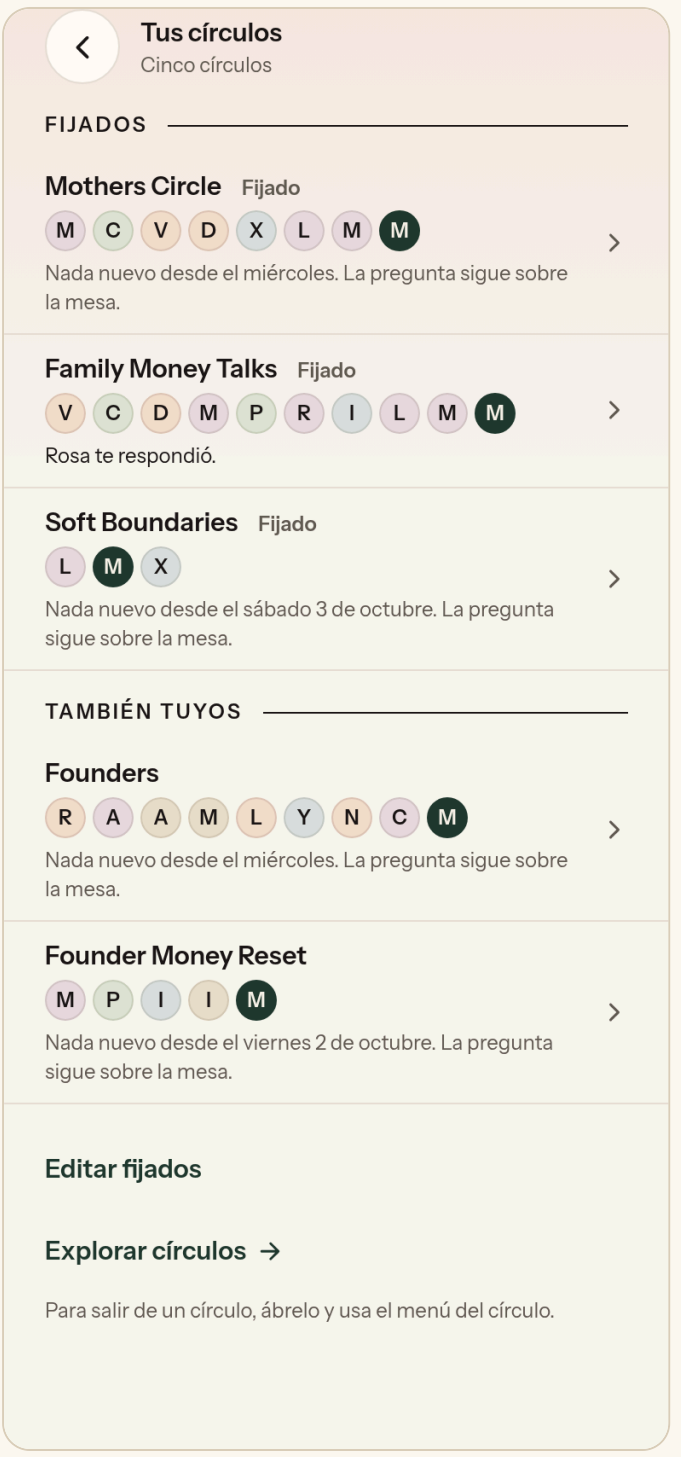

FLOW 9 · CONTINUED

The shelf, all your circles, notifications

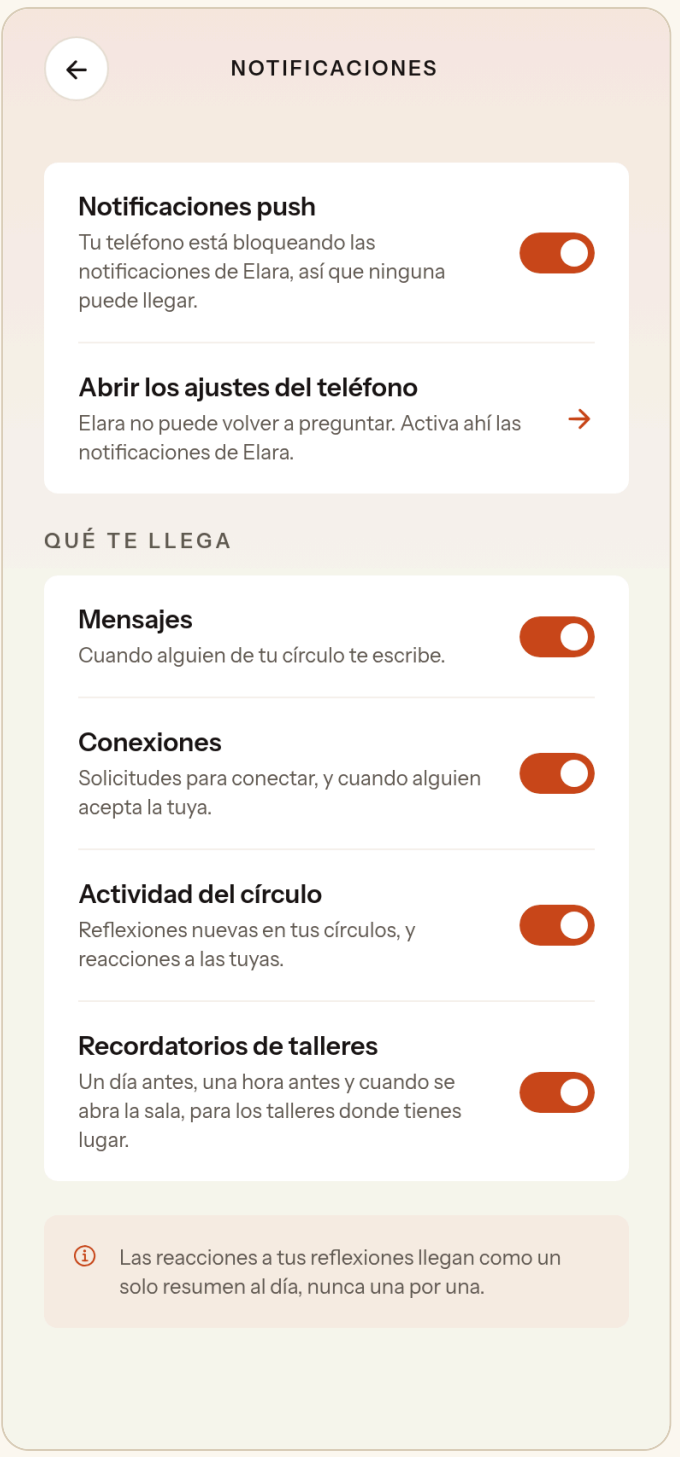

Tus círculos was opened by its route: in the app it is reached only through “Ver más en tus círculos”, which appears when there are more than three “since” lines (none for this account).

x02-shelf *El estante*: one closed question for Mothers Circle.

x01-mine *Tus círculos*: five rooms with faces and a status line; how to leave is explained at the foot.

x08-notifications Notification kinds incl. *Actividad del círculo*. Web reports push blocked while the switch is on; delivery not verified.

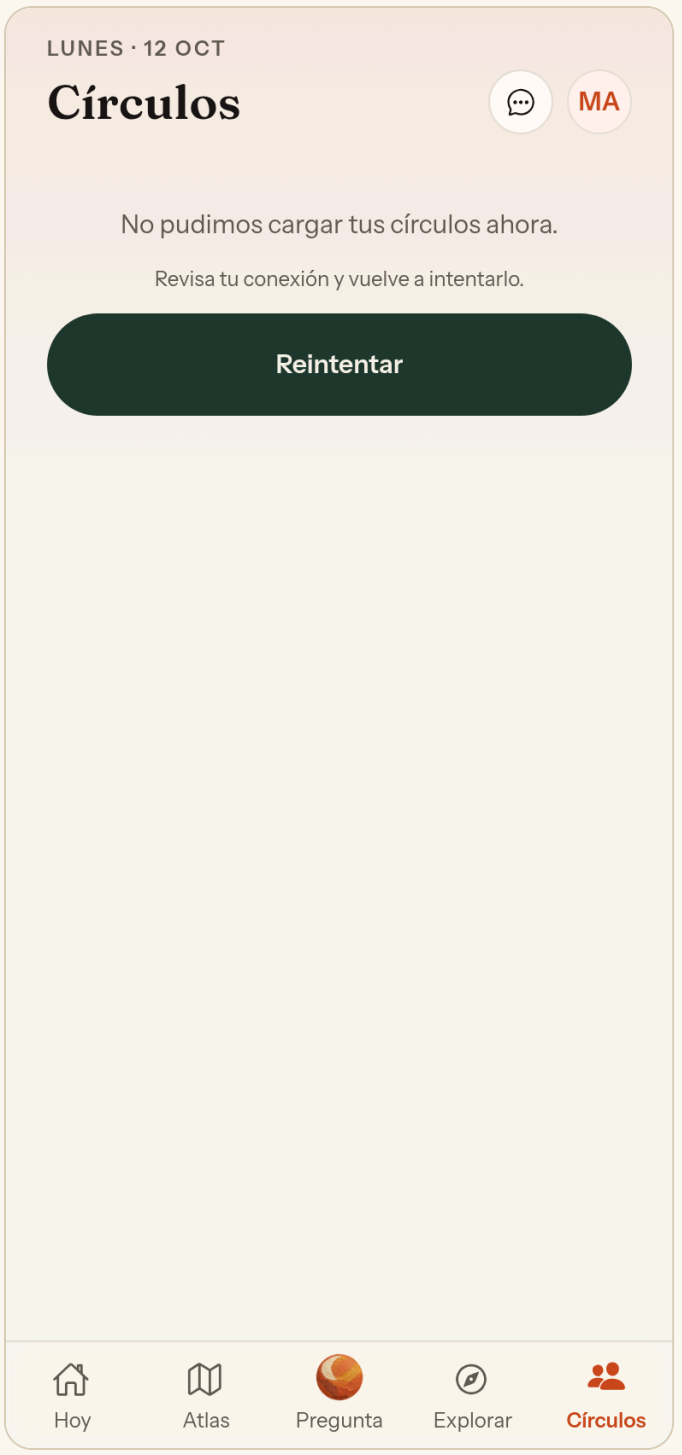

FLOW 10

Loading, error and empty states

Seen in running app · simulated network

Reached by delaying, failing or stubbing one API response in the browser. The app code was not touched.

LOADING	Hall and room show grey skeleton cards (re-check page). In the room, the door and faces come from the hall's cached strip while the rest loads. No "0" count appears.
ERROR	Hall: "No pudimos cargar tus círculos ahora." Room: "No pudimos cargar este círculo ahora." Both with "Revisa tu conexión…" and *Reintentar*.
EMPTY	No circles joined: "Encuentra un círculo donde sentarte" with *Explorar círculos*, and the safety note.

s03-hall-error Hall error with retry (HTTP 500).

simulated network: hall 500

s04-room-error Room error with retry; door and faces still shown from cache.

simulated network: room 500

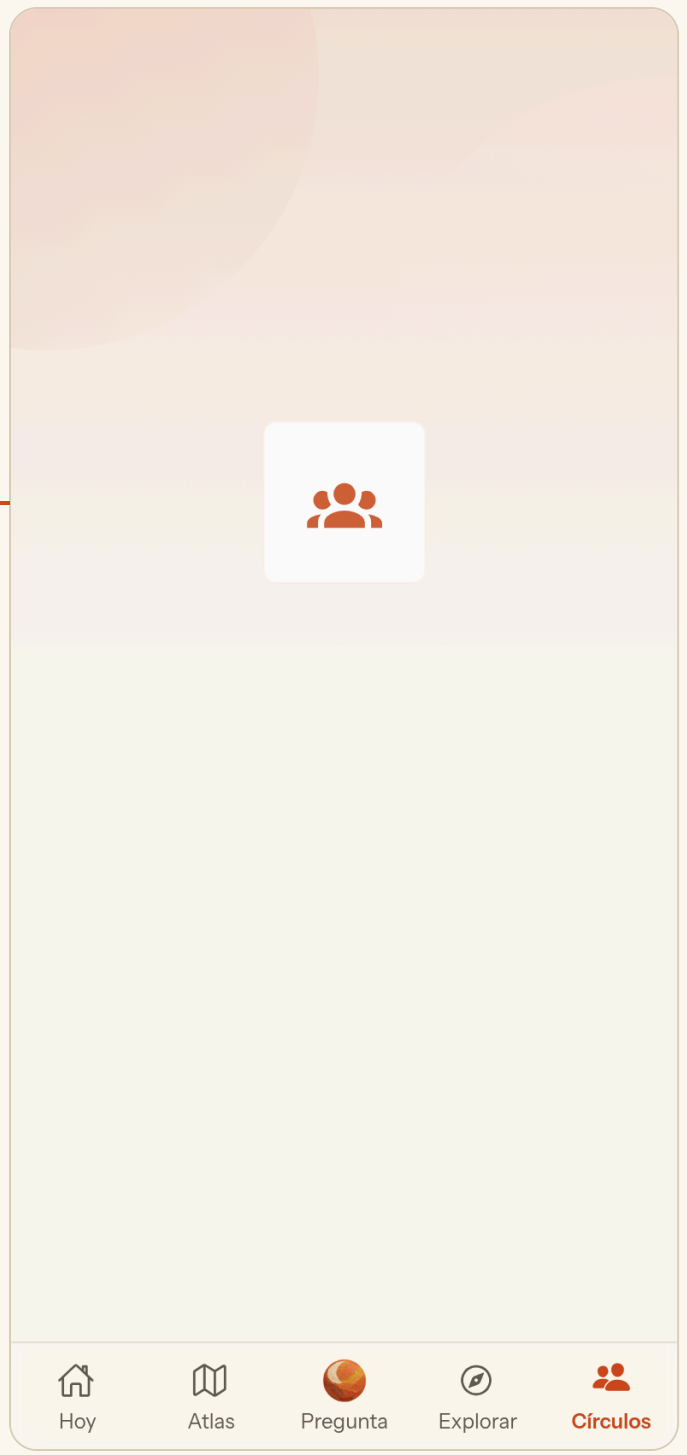

s05-hall-empty No circles joined (stubbed empty hall).

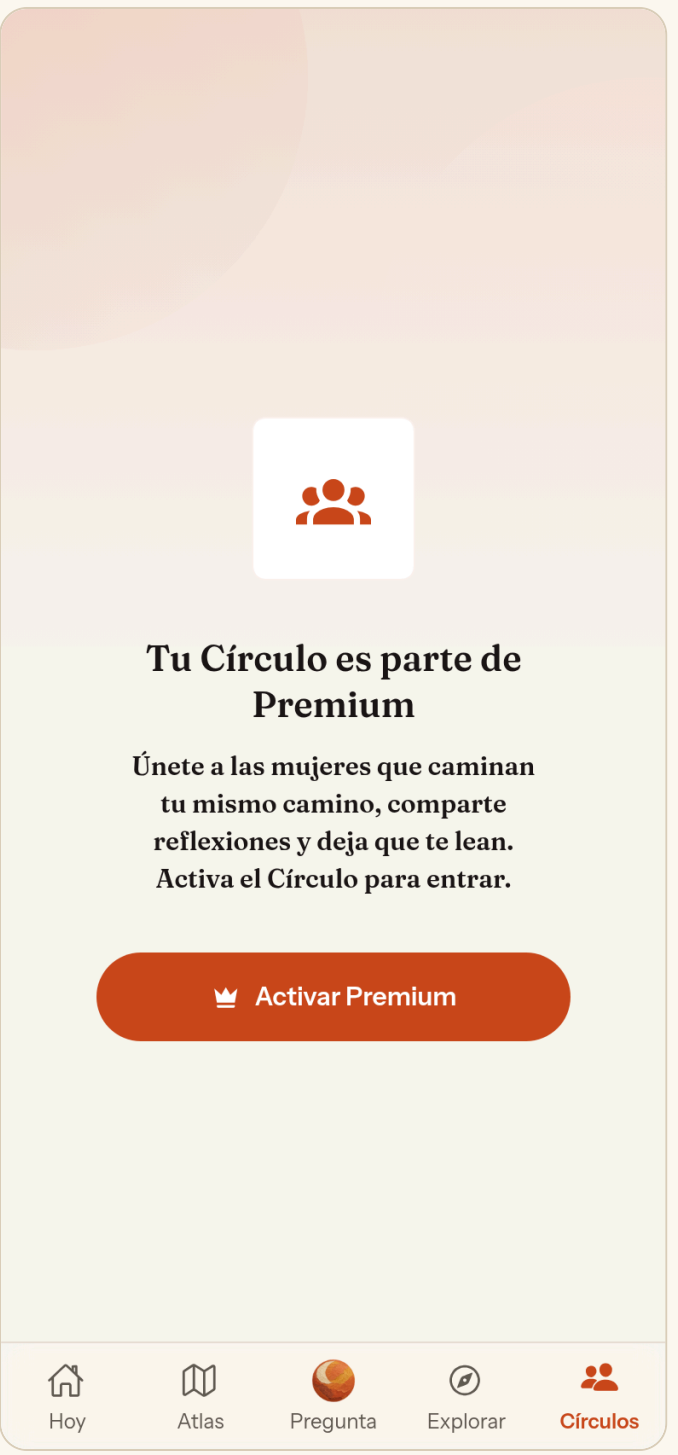

simulated network: empty hall

Access while the subscription loads

R3. On a cold load straight into Circles, a Premium member first sees the Premium upsell (“Tu Círculo es parte de Premium · Activar Premium”) until her subscription arrives. In code `isPremium` is not persisted and starts false.

L03 Unthrottled cold load, a few seconds in: the upsell is fading in (its text is in the page) for this Premium account.

s06-premium-flash Same state held by delaying only the subscription response.

simulated network: subscription delayed

L04 Next frame, about 2.5 s later: the hall replaces it once the subscription loads.

RE-CHECK

The three previously noted issues

Each was re-tested in this build. Only reproducible issues would count as rough edges; none of the three did.

1 · Feed briefly shows “0 reflected today” while loading

Seen in running app · did not reproduce Confirmed in code

The merged feed and its “N reflected today” header no longer exist; no such string or key remains in the mobile source. With the hall response held for 16 s the screen shows only skeleton cards (s01), and the room shows door, faces and a skeleton. The “N han respondido” line is computed server-side and only renders once the question has loaded.

2 · The share-reflection action may be hard to find

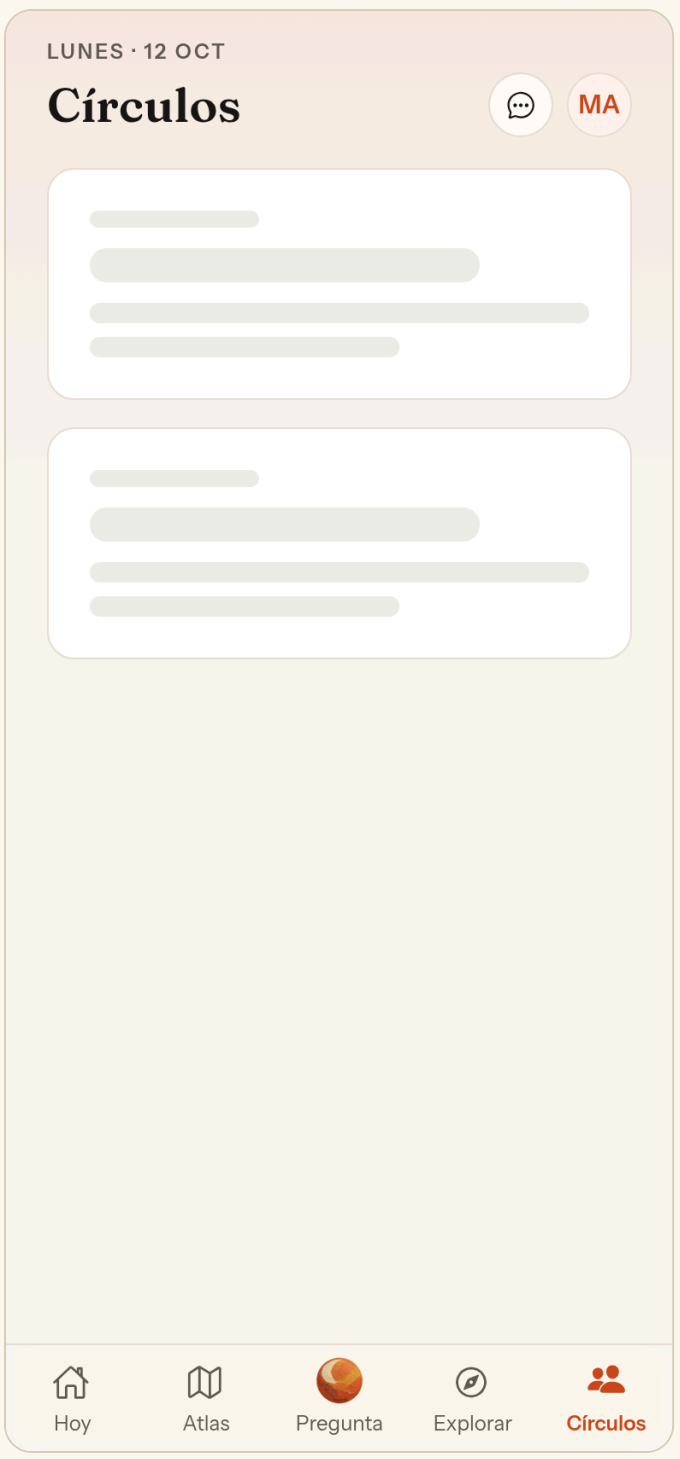

Seen in running app · did not reproduce

On the first screen of the Circles tab, *Añade tu frase* is the only full-width primary button, directly under the question (h01). Inside a room, *Escribe tu respuesta* sits above the fold (r01). Once she has answered, the button is replaced by “Ya respondiste…” by design. Related but different: after posting, the result is easy to miss (R7).

3 · Post action obscured when the keyboard is open

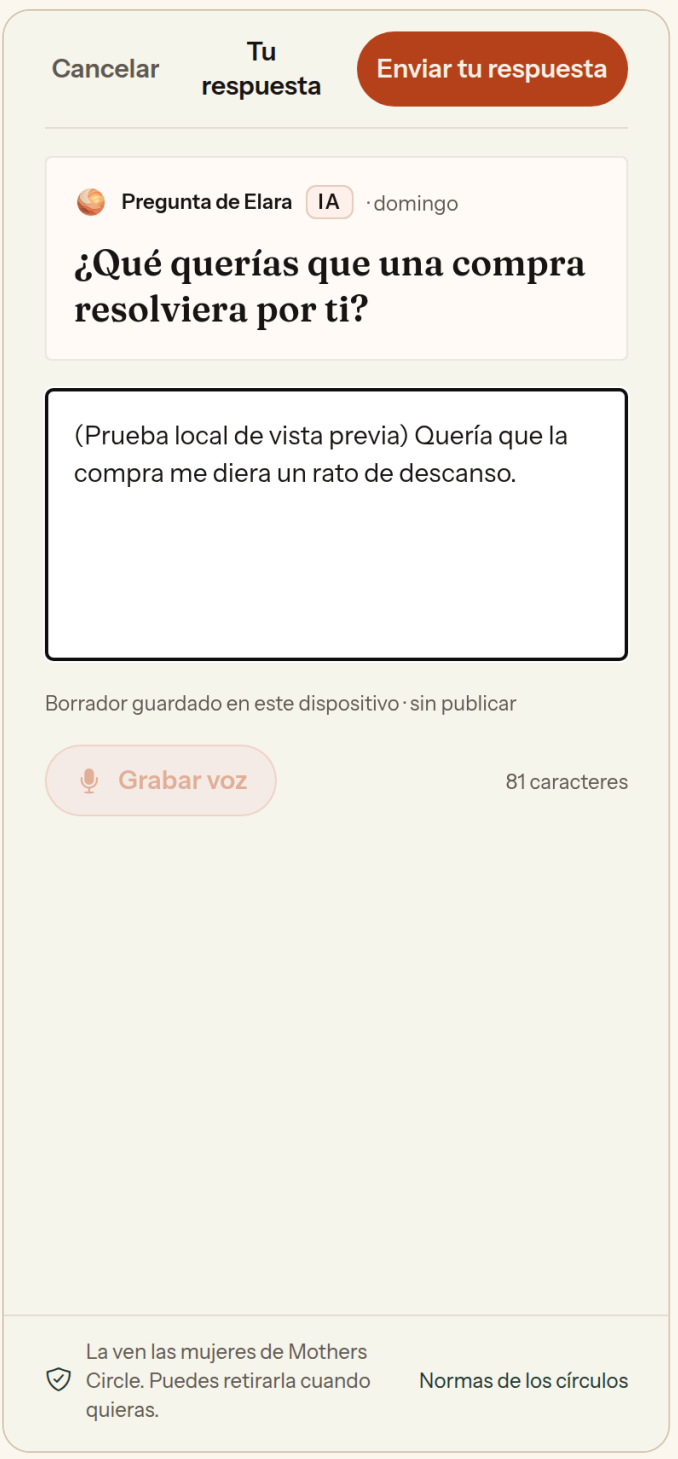

Not verified Confirmed in code · layout only

A web preview has no software keyboard and React Native Web never fires keyboard events, so the keyboard-open state cannot be observed here. In code, the answer composer’s *Enviar tu respuesta* sits in the top header, not at the bottom (c02); the reply field’s send arrow sits in a bottom composer wrapped in `KeyboardAvoider`. Needs a check on a real iOS and Android device.

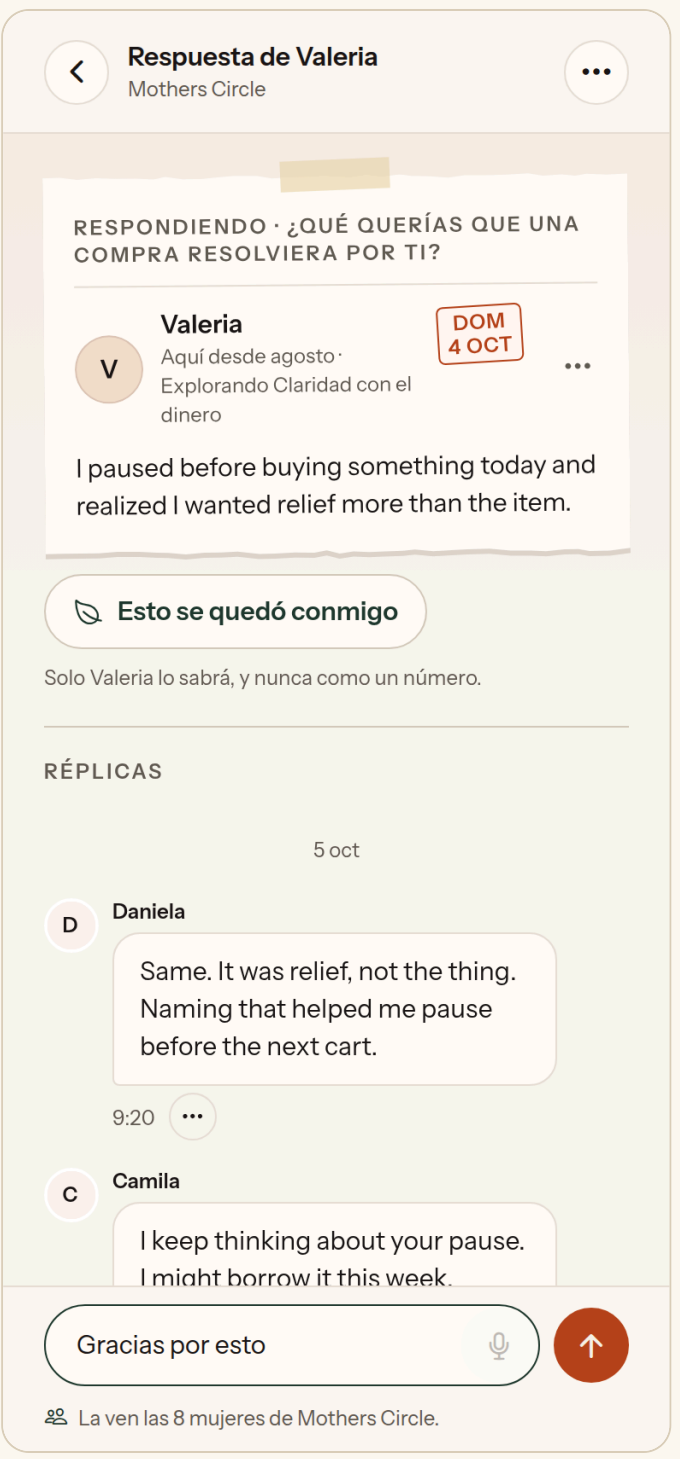

s01-hall-loading Issue 1: loading shows skeletons, no count.

simulated network: hall delayed

c02-typed Issue 3: the answer composer’s Send lives in the header (no keyboard on web).

a06-reply-typed Issue 3: the reply field and its send arrow sit at the bottom; keyboard behaviour not observable.

SUMMARY

What works, rough edges, and what could not be verified

Works, as observed

- Circles tab → hall with one question per room, one primary action, and a clear end.
- Switching rooms by tab, switcher sheet, pin editor and *Tus círculos*.
- Room view: door, seats, question, answers, tables, shelf, safety note.
- Answer detail with flat replies and the private *Esto se quedó conmigo*.
- Writing an answer: draft saved, audience stated in two places, Send in the header.
- Browse → doorway → take a seat → seat caption; leave with a confirm.
- Report (7 reasons, self-harm note), hide, block; guidelines screen; room menu preferences.
- Loading skeletons, error with retry, empty hall (simulated network).
- Tests: API circle suites 174/174, mobile circleRooms 39/39 passing.

Could not be verified

- Keyboard-open layout and the kindness line above the reply field (no keyboard on web).
- Native iOS/Android rendering; Reduce Motion; seat animation timing.
- Push delivery, the daily reaction digest, per-room notification filtering.
- Live updates over the room socket (another member answering).
- Sending a report, crisis resources after it, hide, block, DMs and connection requests (not exercised to avoid creating moderation records).
- Held answers (safety screen), recaps being generated, doorway lines approved, full rooms, retired rooms, catch-up auto-open, rate limits.

Rough edges observed

1. **R1** Removed answer stays listed in the room after “Publicación eliminada” until the room is reopened.
   d03, d05 · seen + code
2. **R2** “Pedir ayuda ahora” and the shield open the general explainer list, not crisis lines.
   h03, x09 · seen + code
3. **R3** Premium member briefly shown the Premium upsell on a cold load into Circles.
   L03, s06 · seen + code
4. **R4** “1 libres” — plural used for one free seat (browse and hall).
   h02, b02 · seen + code
5. **R5** Mixed language: English area labels and room names in the Spanish UI; one area named three ways (“Money Clarity”, “Claridad con el dinero”, “Claridad financiera”); two rooms named “Energy Reset”. Partly seed data.
   r01, b01, h02 · seen
6. **R6** With four or more joined rooms the tabs truncate (“Mothe…”, “Family Mon…”).
   b05 · seen
7. **R7** After Send there is no confirmation and her answer lands last, below the fold.
   c03, c05 · seen
8. **R8** Same member, two join months: “Aquí desde agosto” vs “Aquí desde septiembre”. Cause not verified.
   a01, p03 · seen
9. **R9** Composer header title wraps to two lines between Cancel and Send.
   c01 · seen

Minor copy: the remove confirm says “Desaparece del feed para todas”, though the app no longer has a feed. Dev-only: a nested-button React warning overlay in this dev web build.

Previously noted issues

(1) “0 reflected today” — did not reproduce. (2) Share action hard to find — did not reproduce. (3) Post action under keyboard — not verified.
